Dallas, TX | (214) 617 -6282 | salveranushika@gmail.com | [linkedin.com/in/anushika-salver-a0387328a](https://www.linkedin.com/in/anushika-salver-a0387328a)

EDUCATION

Southern Methodist University, Dallas
Master of Science in Data Engineering

August 2024 - May 2026

SKILLS

Languages: Python, SQL, MySQL, Java (Basics)

AI/ML: Machine Learning, Scikit-learn, Data Preprocessing, Feature Engineering, Model Evaluation

Cloud & Platforms: Google Cloud Platform (GCP), BigQuery, ETL/ELT Pipelines, Data Validation, Data Quality Checks, Structured & Semi-Structured Data Processing (CSV, JSON), Data Warehousing

Technologies: Pandas, Matplotlib, Git, Jupyter Notebook, Apache Kafka, Power BI, Tableau

Other: API Integration, Technical Communication, Problem Solving

WORK EXPERIENCE

Business Web Solutions

Data Engineer

June 2022 – Mar 2023

- Processed structured and semi-structured datasets such as CSV and JSON, implementing validation and quality checks to improve reliability of downstream reporting.
- Automated recurring data workflows and optimized transformations for performance, scalability, and reduced manual effort.
- Collaborated with technical and business teams to troubleshoot issues, communicate findings, and support operational data needs.

Southern Methodist University

Academic Tutor

August 2025 – May 2026

- Tutored undergraduate and graduate students in Python programming, SQL/MySQL and ML fundamentals.
- Guided students in building mini data analysis projects involving data cleaning, querying, and visualization.
- Assisted with debugging assignments, improving students' understanding of algorithms and database concepts.

PROJECTS

Crop Yield & Fertilizer Prediction Using Machine Learning | Python, Scikit-learn, Data Analysis

- Developed a machine learning model to predict optimal fertilizer recommendations and improve crop yield.
- Applied machine learning techniques to detect complex patterns in the data for personalized and sustainable agriculture practices.
- Performed data cleaning and transformation on structured datasets to prepare for model training.

Metro Rail Frequency Optimization Using AI-Based Passenger Analytics | Apache Kafka, Python

- Designed a real-time streaming data pipeline using Apache Kafka to ingest passenger count data from distributed sensors.
- Built Python-based processing modules to aggregate, clean, and analyze streaming data for train frequency prediction.
- Developed API endpoints and visualization dashboards to support operational decision-making.

Congenital Heart Disease Prediction & Echo Imaging | Python, Scikit-learn, Pandas, OpenCV

- Engineered dual ML pipelines: structured data classification and echocardiogram image analysis for anomaly detection.
- Implemented feature extraction using segmentation and morphology techniques combined with CNN-based classifiers.
- Improved diagnostic automation by reducing manual review time through predictive modeling.
