

Aravind Reddy Narreddy

DevOps Engineer

Dayton, Ohio | (937) 476 - 9257 | reddyaravind7194@gmail.com | [Linkedin](#)

SUMMARY

DevOps Engineer with 4 years of experience designing and managing secure, scalable cloud infrastructure and automating software delivery across enterprise environments. Proven expertise in building CI/CD pipelines, implementing Infrastructure as Code, and improving application reliability through containerization, cloud automation, and proactive monitoring. Experienced in collaborating with development, QA, and security teams to accelerate releases, enhance system performance, and maintain high availability while supporting DevSecOps best practices.

PROFESSIONAL SKILLS

CI/CD & DevOps: Jenkins, GitHub Actions, GitLab CI/CD, Azure DevOps, Bamboo, CI/CD Pipelines, Release Automation, Continuous Integration, Continuous Deployment

Cloud Platforms: AWS (EC2, EKS, ECS, S3, RDS, IAM, Lambda, VPC, Route 53, CloudFront, Auto Scaling, CloudWatch)

Containers & Orchestration: Docker, Kubernetes (EKS), Helm, Containerization, Microservices, Service Discovery

Infrastructure as Code: Terraform, AWS CloudFormation, Ansible, Infrastructure Automation

Monitoring & Observability: Prometheus, Grafana, ELK Stack, AWS CloudWatch, OpenTelemetry, Nagios, Logging

DevSecOps & Security: SonarQube, Snyk, Aqua Security, Amazon Inspector, AWS GuardDuty, Tenable, Secure CI/CD, Vulnerability Management

Version Control & Collaboration: Git, GitHub, GitLab, Bitbucket, GitOps, Branch Management, Pull Requests

Automation & Scripting: Python, Bash, PowerShell, Shell Scripting, Linux Automation

Operating Systems: Linux, Ubuntu, Red Hat Enterprise Linux (RHEL), Windows Server

EXPERIENCE

DevOps Engineer | Cigna Healthcare Group |USA

Jan 2025 – Present

- Architected enterprise CI/CD pipelines using Jenkins, GitHub Actions, and Azure DevOps, automating build, testing, security validation, and deployment workflows, reducing software release time by 45%.
- Provisioned and administered highly available AWS infrastructure using EC2, EKS, RDS, S3, IAM, VPC, Auto Scaling, and Elastic Load Balancers to support secure, HIPAA-compliant healthcare applications.
- Standardized infrastructure provisioning by leveraging Terraform and AWS CloudFormation, enabling consistent environment deployments across 20+ AWS accounts while simplifying disaster recovery processes.
- Orchestrated containerized healthcare applications using Docker and Amazon EKS, improving workload scalability, deployment consistency, and platform availability across production environments.
- Established end-to-end observability with Prometheus, Grafana, ELK Stack, AWS CloudWatch, ADOT, and AWS Systems Manager Agent, improving incident detection and reducing troubleshooting time by 35%.
- Strengthened DevSecOps practices by integrating Amazon Inspector, AWS GuardDuty, Tenable Agent, SonarQube, Aqua Security, Snyk into CI/CD pipelines for continuous security validation and compliance monitoring.
- Partnered with developers, QA engineers, cloud architects, and security teams to automate operational processes using Ansible, Python, Bash, and PowerShell while improving deployment reliability and release quality.

DevOps Engineer | Aplus Datalytics |India

Jan 2021 – Jul 2023

- Built automated CI/CD pipelines using Jenkins and GitLab CI/CD to streamline application builds, testing, artifact management, and production deployments, increasing deployment frequency by 40%.
- Managed AWS cloud environments using EC2, S3, RDS, Lambda, IAM, and VPC services, delivering secure and scalable infrastructure for enterprise data analytics applications.
- Automated infrastructure provisioning with Terraform and AWS CloudFormation, reducing environment setup time by 50% while maintaining configuration consistency across multiple environments.
- Deployed and administered Docker-based microservices on Kubernetes clusters, improving application scalability, resource utilization, and deployment reliability.
- Configured centralized monitoring, logging, and alerting using Prometheus, Grafana, ELK Stack, and AWS CloudWatch, increasing infrastructure visibility and improving operational performance by 30%.
- Automated routine system administration and deployment activities using Python and Bash scripting, minimizing manual effort and improving operational efficiency across cloud environments.
- Coordinated with software developers, database administrators, AWS support, and cybersecurity teams to resolve production issues, optimize cloud resources, and maintain secure, stable application environments.

EDUCATION

Master of Science in Computer Science

May 2025

University of Dayton | Dayton– USA

CERTIFICATIONS

- Certified Kubernetes Administrator (CKA)
- Google Associate Cloud Engineer (ACE)
