

ARSENIY SHUMILOV

Los Angeles, CA | (347) 551-3857 | shumilov@usc.edu | <https://www.linkedin.com/in/arseniy-shumilov>

EDUCATION

University of Southern California

Master of Science in Analytics

GPA: 3.8 / 4.0

Los Angeles, CA

August 2023-May 2025

University of La Verne

Bachelor of Science in Psychology

GPA: 3.9 / 4.0

La Verne, CA

August 2021-May 2023

RELEVANT SKILLS

- Programming Languages: Python, SQL, R
- Modeling and Analysis: Excel, Scikit-learn, TensorFlow, PyTorch
- Data Visualization: Tableau, PowerBI
- Database Management & Cloud: MySQL, Snowflake, BigQuery (GCP)

PROFESSIONAL EXPERIENCE

Solix Business Services

Data Analyst Intern

Los Angeles, CA

January 2024-May 2024

- Built predictive models using Python to detect seasonal sales shifts and optimize pricing strategy, contributing to a 10% increase in holiday revenue and a 20% boost in client engagement
- Developed risk-aware pricing insights that informed strategic decisions for a niche e-commerce platform, enhancing customer revenue and market penetration
- Collaborated with finance and operations teams to design Tableau dashboards for profit and loss reporting, improving real-time visibility into key performance metrics
- Applied rigorous data analysis and model validation techniques to ensure actionable business insights aligned with revenue forecasting and financial planning goals

PROJECTS

Time-Series Forecasting with Neural Networks

May 2024-July 2024

- Designed and trained an LSTM model in TensorFlow to forecast price trends based on minute-level financial data extracted from a live API
- Implemented robust model evaluation and feature importance analysis, focusing on reproducibility and stakeholder communication
- Conducted performance validation, emphasizing data preprocessing, model calibration, and explainability

Machine Learning Approaches for Predicting Sepsis Mortality

February 2024-July 2024

- Led a collaborative research project to develop a high-performance classification model for mortality risk among hospital patients using the MIMIC-III dataset
- Accomplished a significant result by reaching an AUROC score of 97%, indicating a high level of accuracy in predictive capabilities of proposed model compared to baseline models
- Published results on arXiv, showcasing data-driven decision-making and interdisciplinary teamwork
