

DWARAKA N

Data Engineer

Mail: mrd.001ni@gmail.com | LinkedIn: <https://www.linkedin.com/in/dwaraka-n-9a59a7196/>

Mobile: 610-500-6585

PROFESSIONAL SUMMARY

- Over **6 years of experience** in the **Data Engineering** field across major clients, including **CVS Health, Chase, and AT&T**.
- Extensive experience with **ETL development**, designing data pipelines, and optimizing processes to handle large-scale datasets.
- Deep knowledge of **cloud platforms** like **AWS, Azure, and Google Cloud** to scale data solutions.
- Expertise in **big data tools** including **Apache Hadoop, Apache Spark, Kafka, Hive, and Flume** to process and analyze large datasets.
- Proficient in **SQL, Python, and Java** for scripting and querying large datasets efficiently.
- Skilled in using **data warehousing solutions** such as **AWS Redshift, Google Big Query, Snowflake, and Teradata**.
- Experience in **data orchestration** using **Apache Airflow** and **Apache Nifi** for managing workflows and scheduling ETL jobs.
- Developed real-time data processing pipelines using **Apache Kafka** and **Apache Spark Streaming** for data ingestion and transformation.
- Strong experience in implementing **data quality checks**, validation, and **data profiling** to ensure the integrity of data.
- Proficient in integrating data from **multiple sources**, including APIs, flat files, and databases, into unified data lakes and warehouses.
- Expertise in **cloud storage solutions** like **AWS S3, Azure Blob Storage, and Google Cloud Storage** for efficient data storage and retrieval.
- Built and maintained scalable **ETL pipelines** for continuous data processing using **Python, Apache Nifi, and Apache Spark**.
- **Performance tuning** of data pipelines and **SQL queries** to improve processing time and optimize resource usage.
- Automated **data refreshes** and reporting tasks using **Apache Airflow**, improving efficiency by **30%**.
- Hands-on experience in **containerization technologies** like **Docker** and **Kubernetes** for deploying and managing data applications.
- Expertise in building **data visualization dashboards** using **Tableau** and **Power BI** for real-time insights and reporting.
- Implemented **data security** practices ensuring compliance with industry regulations (HIPAA, GDPR) and protecting sensitive data.
- Led **data migration** projects to move legacy systems to modern cloud-based infrastructures, improving scalability and performance.
- Collaborated closely with **data scientists** to deploy **machine learning models** and support predictive analytics use cases.
- Actively participated in **Agile/Scrum teams**, providing timely updates and coordinating efforts with business stakeholders.

Technical Skills

Programming Languages	Python, SQL, Java, Shell Scripting
Big Data Technologies	Apache Hadoop, Apache Spark, Apache Kafka, Hive, HBase, Flume, Pig

ETL Tools	Apache Nifi, Talend, Informatica, SSIS, Python (Pandas, Dask), Airflow
Cloud Platforms	AWS (S3, Redshift, EMR, Lambda, EC2), Azure, Google Cloud (Big Query, Dataflow, Pub/Sub)
Data Warehousing Solutions	Snowflake, Amazon Redshift, Teradata, Google Big Query
Data Orchestration & Workflow Automation	Apache Airflow, Apache Nifi, Apache Oozie
Databases	SQL Server, MySQL, PostgreSQL, MongoDB, Cassandra
Version Control	Git, GitHub, Bitbucket
Containerization & Virtualization	Docker, Kubernetes
Data Visualization & Reporting Tools	Tableau, Power BI, QlikView
Data Security & Compliance	HIPAA, GDPR, Data Encryption, Role-based Access Control (RBAC)
Monitoring Tools	AWS CloudWatch, Prometheus, Grafana
DevOps Tools	Jenkins, Terraform, Ansible, CI/CD pipelines

Professional Experience

CVS Health | Data Engineer

September 2023 – Present

- Developed and optimized **ETL pipelines** using **Apache Spark** and **Python** to ingest and transform healthcare data for reporting and analytics.
- Designed and implemented **real-time data processing** solutions using **Apache Kafka** and **AWS Lambda**, enabling instant insights into patient data.
- Built scalable **cloud architectures** on **AWS** to manage large healthcare datasets with high availability and low-latency access.
- Automated data workflows using **Apache Airflow**, reducing the need for manual intervention and increasing pipeline reliability.
- Integrated data from **multiple healthcare systems**, creating a unified **data lake** on **AWS S3** for more accessible data storage.
- Developed custom **data validation scripts** in **Python** to ensure the accuracy and quality of incoming healthcare data.
- Ensured **compliance with HIPAA** and other data privacy regulations, implementing encryption and access control protocols to protect sensitive information.
- Built and maintained **data models** to support healthcare reporting and analytics for various business units.
- Worked closely with **data scientists** to deploy predictive models for **patient behavior analysis** and clinical decision-making.
- Developed custom **dashboards** in **Tableau** provide real-time insights for decision-makers in the healthcare industry.
- Optimized the performance of **SQL queries** for data reporting, reducing query times by **25%**.
- Led a **data migration project** to transition legacy healthcare systems to the cloud, improving scalability and reducing costs by **30%**.
- Delivered **training sessions** for business stakeholders, helping them understand data pipelines and reporting tools.
- Implemented **automated error detection and alerts** using **AWS CloudWatch** to monitor ETL jobs.
- Reduced **data processing time** by **20%** by implementing **data partitioning** strategies in **AWS Redshift**.

- Created documentation for **data workflows**, providing clarity and transparency for cross-functional teams.
 - Led a team of **data engineers** to enhance data pipeline performance and reliability.
 - Supported disaster recovery and **backup strategies**, ensuring business continuity for patient data.
 - Delivered regular status updates and reports on project progress to senior leadership.
 - Participated in **Agile sprints** and worked with cross-functional teams to deliver data- driven solutions on time.
-

Chase | Data Engineer

May 2020 – December 2022

- Developed **ETL pipelines** to ingest financial data using **Apache Spark** and **AWS Redshift**, streamlining the data integration process.
 - Built **real-time data processing pipelines** using **Apache Kafka**, ensuring continuous data ingestion and transformation for financial applications.
 - Integrated data from multiple internal and external APIs to create a unified **data lake** in **AWS S3**, making data more accessible for analysis.
 - Designed **data models** for customer transaction data to enable efficient reporting and analytics.
 - Implemented automated **data quality checks** and **validation scripts** using **Python** to ensure clean and accurate data.
 - Improved data processing time by **30%** through the optimization of SQL queries and data transformation scripts.
 - Led **cloud migration** efforts to move banking data systems to **AWS**, improving system scalability and reducing costs.
 - Developed **dashboards and reports** in **Power BI** and **Tableau**, enabling stakeholders to make informed financial decisions.
 - Built and maintained **CI/CD pipelines** using **Jenkins** to streamline data pipeline deployment and ensure faster release cycles.
 - Collaborated with **data scientists** to implement **machine learning models** for fraud detection and customer segmentation.
 - Provided **ongoing support** for cloud-based data environments, ensuring availability and reliability of financial systems.
 - Worked with the compliance team to ensure that **financial data** handling met **GDPR** and other data protection regulations.
 - Developed scripts to automate the extraction of historical data for reporting purposes, saving **20% of time** for the reporting team.
 - Participated in **Agile development processes**, providing regular updates and feedback during sprint reviews.
 - Created **data processing documentation** for internal teams, improving team knowledge sharing and operational efficiency.
 - Reduced data pipeline failure rates by **25%** through improved monitoring and error handling.
 - Played a key role in improving the **data warehouse structure**, leading to faster reporting and improved customer insights.
 - Designed and implemented **data refresh strategies** to ensure real-time data availability for critical financial systems.
 - Provided training and mentoring to junior data engineers, helping them to develop skills in **cloud technologies** and **big data tools**.
 - Worked closely with **business analysts** and stakeholders to translate business requirements into data engineering solutions.
-

AT&T | Data Engineer

June 2018 – May 2020

- Designed ETL architecture using **Python**, **Apache Nifi**, and **Hadoop** to process telecom data into an Azure-based data lake.

- Optimized advanced SQL queries and procedures across **Snowflake, PostgreSQL, and Azure Databricks** for performance and analytics.
 - Developed data pipelines using **Azure Data Factory and Informatica**, automating workflows for consistent and scalable ETL processing.
 - Refactored legacy **SQL and Snowflake logic into DBT and PySpark in Databricks**, enhancing performance with Delta Lake.
 - Built real-time **stream processing pipelines** using Apache Kafka and Spark Streaming to deliver instant insights.
 - Engineered real-time ingestion of multi-format data (Parquet, Avro, JSON, XML) using **Event Hubs and PySpark** transformations.
 - Migrated large-scale data from on-prem **Snowflake to Azure Databricks** via Blob Storage and automated ADF pipelines.
 - Used **GitHub** for version control and collaborative code management in **Agile environments**.
 - Implemented **Jenkins CI/CD pipelines for ETL** job deployment and automated testing across development stages.
 - Integrated relational and NoSQL databases like **Oracle and PostgreSQL** to support cross-system data synchronization.
 - Ensured system reliability through **performance tuning, disaster recovery planning, and detailed technical documentation**.
 - Conducted regular **system audits** and performance assessments to ensure the integrity and efficiency of telecom data systems.
 - Supported the development of **API-based data interfaces** for integrating external data with AT&T's internal systems.
 - Delivered comprehensive **technical documentation** and **training** to ensure smooth transitions between project phases and team members.
-

Education

- **Master's in Information Technology, Wilmington University**
-
