Objective

Data Analyst with 2+ years of software engineering experience, skilled in Python, SQL, and cloud data platforms. Proficient in building data pipelines, performing statistical analysis, and creating actionable business insights through data visualization. Seeking to leverage strong analytical and technical expertise to deliver data-driven solutions in a dynamic analytics role.

TECHNICAL SKILLS

Programming Languages: Python (Pandas, NumPy, Scikit-learn), SQL (PostgreSQL, MySQL), R (basic)

Data Visualization: Power BI, Tableau, Matplotlib, Seaborn

Data Engineering & Warehousing: AWS (Redshift, Glue, S3, Lambda), ETL, Data Cleaning, Data Modeling

Machine Learning: Logistic Regression, Decision Trees, Random Forest

Tools & Platforms: Jupyter Notebooks, Git, Docker, Agile/Scrum

PROFESSIONAL EXPERIENCE

Rlogical Techsoft

Ahmedabad, Gujarat, India

Software Engineer

May 2021 - June 2023

- Developed and optimized Python-based ETL pipelines to automate data ingestion and transformation, increasing data processing efficiency by 20%.
- Designed and maintained PostgreSQL databases, crafting complex SQL queries to support business intelligence reporting.
- Built interactive dashboards with Power BI and Tableau to visualize application metrics and user behavior, improving stakeholder data access.
- Collaborated in Agile teams to deliver scalable REST APIs for internal analytics platforms and third-party integrations.
- Implemented data validation and monitoring solutions to ensure data quality and accuracy in production workflows.

ACADEMIC PROJECTS / PERSONAL PROJECTS

Data-Driven Risk Management for Enhanced Decision Making

- Used AWS to build a Data Warehouse using airports, airlines, routes, and passenger datasets that were taken from various sources, and used the Tableau tool to create visualizations and get some general insights on the data.
- Data cleaning and Transformations were done using AWS Glue Databrew.
- Created Crawlers on the cleaned data using AWS Glue which was used as an ETL tool.
- Used Amazon Redshift as Data Warehouse. AWS Glue was used to load the data from S3 to Redshift.

Customer Risk and Credit Assessment

- Built a credit risk prediction model using Python and Scikit-learn, achieving 85% accuracy and an F1-score of 0.82 by analyzing customer payment behaviors and financial data.
- Conducted exploratory data analysis (EDA) and created insightful visualizations with Matplotlib and Seaborn to identify risk factors and default patterns.
- Developed Power BI dashboards for real-time creditworthiness assessment, enabling faster and more informed loan decisions.
- Streamlined SQL queries and data integration processes to support dynamic reporting and analytics workflows.

STOCK MARKET PRICE PREDICTION AND TREND ANALYSIS

- I conducted comprehensive exploratory data analysis on stock price datasets from 12 NASDAQ companies to identify key influencing factors.
- Applied multiple machine learning models including Linear Regression, Random Forest, and Neural Networks to predict stock prices and trends.
- Some data mining tasks were performed on the dataset before implementing Prediction Models. These majorly include Data Preprocessing, Data Transformation, Exploratory Data Analysis, and CATCH22 AND VARIABLE SELECTION.
- Compared model performances using standard evaluation metrics and provided recommendations for investment strategy enhancements.

EDUCATION

Gujarat Technological University

Gujarat, India

Bachelor of Technology in Computer Engineering

Aug 2017 - July 2021

Pace University

New York, United States

M.S. in Computer Science

Aug 2023 - May 2025
