

DEXTER MITCHELL

Data Scientist | Machine Learning Engineer

251-447-6448 | dextermitchell2017@gmail.com | Birmingham, AL

<https://www.linkedin.com/in/dexter-mitchell-116a721a1/>

SUMMARY

Data Scientist with experience in machine learning, predictive modeling, and data-driven decision-making. Skilled in leveraging Python, C#, SQL, and Tableau to develop scalable data pipelines, build predictive models, and deliver actionable insights. Proven expertise in integrating systems using REST APIs and managing cross-functional teams to optimize workflows. Passionate about delivering data-centric solutions to complex business problems.

SKILLS

- Programming Languages: Python, C#, SQL, R
- Data Science Tools: Scikit-learn, TensorFlow, PyTorch
- Visualization Tools: Tableau, Excel, Matplotlib
- Integration & Tools: REST API, Swagger, Postman, JSON
- Other Tools: Microsoft Azure Machine Learning Suite, SolidWorks PDM, AutoCAD, Jupyter Notebooks

EDUCATION

MS in Data Science (Machine Learning Concentration)
Eastern University | 2024

BS in Physics (Minor in Mathematics)
University of Alabama at Birmingham | 2021

PROFESSIONAL EXPERIENCE

Project Engineer | Data Scientist

StellaSource | 2023-Present

Cloud-based metal quoting and ERP integration solution platform..

- Integrated customer ERP systems with our cloud platform using REST APIs, C#, Swagger, and Postman, enabling seamless data exchange between platforms.
- Designed and implemented a machine learning pipeline using Python and Scikit-learn to analyze customer data, generate predictive models, and deliver tailored business recommendations, reducing project close times by 2 weeks.

- Developed customer segmentation models utilizing Python to identify clients at risk of churn, those likely to renew, and ideal potential customers based on predictive criteria.
- Leveraged SQL and Tableau to query, visualize, and interpret complex datasets, translating insights into actionable recommendations for product and customer enhancements.
- Utilized JSON data structures to facilitate API integrations, ensuring accurate and efficient data transfer between systems.
- Supervised customer installations and integrations to ensure alignment with technical specifications and business outcomes.
- Used Jupyter Notebooks for business experimentation, data pipeline creation, and explanatory analysis.
- Utilized Excel to analyze customer and internal data sets as well as provide external reporting as needed for customers

Business Impact:

- Reduced project close times by 2 weeks by eliminating the need for manual data gathering from multiple departments and third parties.
- Improved customer retention and sales targeting by developing predictive segmentation models.

Logistics Engineer

Schnellecke Logistics | 2022-2023

An industrial logistics and supply chain management provider for Mercedes.

- Managed and supervised a team of 10+ personnel, ensuring efficient daily operations and adherence to project timelines.
- Automated daily KPI reporting using Python and Jupyter Notebooks, reducing manual data processing time from 2 hours to 15 minutes.
- Pulled and analyzed departmental data to create and track KPIs, improving operational efficiency and project tracking.
- Designed and refined detailed AutoCAD models for process and layout improvements to optimize warehouse workflows.
- Identified and implemented process improvements based on data trends, leading to a 10% increase in throughput.

Business Impact:

- Saved 2 hours daily by automating KPI reporting, allowing teams to focus on strategic tasks instead of manual data wrangling.

- Improved logistics efficiency by streamlining data tracking and reporting processes.

Mechanical Design Engineer

Kratos | 2021-2022

Aerospace and defense company focused on high-tech engineering solutions.

- Designed and built a vacuum chamber for cryo-mechanical testing, ensuring precise instrumentation for experiments.
- Developed a novel translational alignment method for ATHENA's large x-ray mirror using laser sources, retroreflectors, and photon sensors, solving NASA's issue of lacking a sufficiently large testing facility.
- Implemented an engineering file storage system using SolidWorks PDM to streamline workflows and improve efficiency by 15%.

Business Impact:

- Solved a critical alignment issue for NASA by designing an alternative testing method for large x-ray mirrors.
- Improved efficiency in engineering design workflows by implementing a structured storage system.
