

PROFESSIONAL SUMMARY

Data Analyst with over **5 years of experience** architecting cloud data solutions, automating analytics pipelines, and delivering predictive insights within corporate retail and pharmaceutical sectors. Proficient in transforming complex datasets into executive-level strategies using advanced SQL, Python, Snowflake, and Tableau. Proven track record of optimizing data engineering workflows with dbt and Apache Airflow while applying Generative AI frameworks to accelerate business intelligence delivery and technical documentation cycles.

TECHNICAL SKILLS

- Languages & Querying:** SQL (Expert: Window Functions, CTEs, Indexing, Performance Tuning), Python (Pandas, NumPy, Scikit-Learn), R, Bash, DAX, Look ML
- Generative AI & LLM Orchestration:** Prompt Engineering for Data Pipelines, Retrieval-Augmented Generation (RAG) concepts, LLM-Assisted Code & Query Generation, OpenAI API Integration, Lang Chain (Basic), Vector Databases
- Cloud Platforms & Data Warehouses:** Snowflake, Google Big Query, AWS (Redshift, S3, Athena), Databricks, Modern Data Stack (MDS) Architecture
- BI & Data Storytelling:** Tableau (Advanced: LODs, Parameters, Server), Power BI (Premium, Service), Looker, Figma (Dashboard Wireframing), Excel (Power Pivot, VBA)
- Analytics Engineering & Automation:** dbt (Data Build Tool), Apache Airflow, ETL/ELT Pipeline Deployment, Git/GitHub, CI/CD, Cron Automation, Alteryx
- Advanced Methodologies:** A/B Testing & Multivariate Experimentation, Statistical Hypothesis Testing, Predictive Modelling, Customer Segmentation (RFM), Cohort Analysis, Time-Series Forecasting
- Data Governance & Quality Assurance:** Data Observability (Monte Carlo/Great Expectations), Data Lineage, Schema Management, Data Auditing, Data Privacy Compliance (GDPR/CCPA)
- Business Operations & Leadership:** Executive Stakeholder Management, Cross-Functional Collaboration (Product, Marketing, FinOps, RevOps), Core Business KPI Definition, Scrum/Agile Methodologies

PROFESSIONAL EXPERIENCE

Merck & Co. | *Data Analyst*

Feb 2024 – Present | USA

- Engineered automated SQL scripts and dbt models to aggregate clinical trial data across Snowflake warehouses, reducing weekly executive dashboard data refresh latency from 24 hours down to two.
- Designed complex Tableau dashboards using customized Level of Detail expressions, giving cross-functional product management teams immediate clarity into lifecycle tracking metrics for three key pharmaceutical pipelines.
- Collaborated directly with commercial operations to formulate core sales performance indicators, executing statistical cohort analyses that isolated a three percent drop-off pattern within regional distribution channels.
- Programmed predictive time-series forecasting scripts in Python using Pandas and Scikit-Learn to project manufacturing supply needs, preventing material shortages across four distinct domestic processing facilities.
- Established rigid data observability workflows using automated checks, significantly reducing upstream data discrepancies and ensuring compliance with federal healthcare privacy regulations during internal auditable system updates.
- Deployed prompt engineering methodologies to build internal documentation utilities, parsing legacy databases into clean code structures that accelerated query building cycles for five junior team members.

Capgemini | *Data Analyst*

Jan 2020 – Jul 2022 | INDIA

- Constructed parameterized Power BI reports using optimized DAX logic, allowing international retail stakeholders to evaluate consumer purchasing behaviours across twelve distinct e-commerce web applications simultaneously.
- Developed robust ETL pipelines using Apache Airflow orchestration to clean unstructured consumer transaction files, extracting three million monthly records from cloud-based AWS storage buckets seamlessly.
- Executed comprehensive multivariate A/B testing frameworks on payment gateway interfaces, establishing statistical hypothesis tests that validated a six percent growth in direct checkout conversion rates.
- Isolated critical financial anomalies by deploying automated regression algorithms in R, minimizing reporting discrepancies across corporate ledger records and saving the client forty thousand dollars annually.
- Authored structured data dictionaries and maintained precise lineage maps within Agile sprints, accelerating cross-functional delivery times for engineering pipelines by twenty percent over two years.
- Restructured legacy Excel reporting frameworks into automated Python scripts, shifting manual calculations into scheduled routines that returned fifteen production hours back to financial analysis units.

PROJECTS

Business Performance Analytics

- Aggregated disparate corporate ledger datasets using complex SQL CTEs and window functions within Google Big Query, identifying structural revenue leaks and operational performance gaps across regional business branches.
- Developed interactive Tableau dashboards utilizing advanced parameter actions, providing commercial finance stakeholders with dynamic visibility into historical profit margins and quarterly revenue key performance indicators.
- Conducted statistical cohort analysis in Python to evaluate customer lifetime value variations, delivering data-backed recommendations that optimized resource allocation and expanded overall business margins by ten percent.

Facial Recognition System – Data Analysis Support

- Profiled multi-gigabyte image metadata arrays using Python data frames, executing rigorous validation checks to isolate formatting anomalies and eliminate systemic ingestion errors before downstream machine learning validation.
- Executed exploratory data analysis to isolate image processing system bottlenecks, pinpointing latency trends across specific camera hardware inputs to support infrastructure scaling and compute logic optimization.
- Mapped system log data lineages and drafted technical markdown documentation, establishing standardized tracking protocols that accelerated troubleshooting cycles for the engineering team by fifteen percent.

EDUCATION

Master of Science in Management Information Systems, Auburn University at Montgomery

May 2024
