

DIVYA

E-mail ID: divya.sreeram0826@gmail.com| Contact No. (970)-430-7626

PROFESSIONAL SUMMARY

- 6+ years of IT experience in all phases of Data warehouse lifecycle involving Analysis, Design, Development, Coding and Testing of DWH Projects.
- Strong knowledge in data warehouse concepts, Fact table, dimension table, star and snowflakes schema methodologies.
- Involved in the full development lifecycle (SDLC) from requirements gathering through development and support using ETL tools Informatica & SSIS and also on AWS Cloud platform.
- Extensive Experience working with Product owners, BA, BSA, SMEs, App DBAs, Admin teams, Prod support as well as senior management.
- Good Knowledge in Enterprise Data Warehouse, Data Marts and Data Migration projects.
- Have good knowledge in the Banking, Healthcare, Financial domain.
- Development and Testing of Data Warehouse/Business Intelligence (DW/BI) applications (ETL) and Perform unit, performance and E2E testing for the developed code and generate code quality reports.
- Expertise in working with different SQL platforms such as T-SQL, My SQL, AWS SF.
- Good working knowledge on AWS environment with different services DynamoDB, S3, EC2, AWS Glue, CloudWatch, Amazon Redshift, SQS Queue, Step & Lambda functions.
- Developed ETL Strategies using an ideal mix of Database based Loading Strategies and ETL based load strategies.
- Experienced in Data governance of data profiling, lineage, completeness, Cleansing, Standards, accuracy, quality and validation of data.
- Experience in integration of data sources like Teradata, Oracle and flat files such as delimited, fixed width, csv, excel, ncpdp, xml, zip etc.
- Handful experience in end to end data integration projects using ETL tools Informatica, SSIS & AWS and RDBMS on Oracle, AWS and MS SQL server.
- Analyse the on-prem data and interpret all complex big data on all target systems.
- Work on day to day operational issues submitted by customers through tools like JIRA, UARS (User access request system), Incidents.
- Proficient in using SQL, PySpark, Python to write custom queries to test the application.
- Worked on Slowly Changing Dimensions (SCD) Type 1, 2, 3 to keep track of historical data.
- Good in WINSCP, s3, Airflow protocols and Windows based file transfer environments.
- Involved in code reviews, architectural reviews and peer reviews of projects and maintained documentation as per client standards.
- Worked on Agile Scrum/ JIRA methodologies in all projects.
- Excellent communication and interpersonal skills, ability to learn quickly, good analytical reasoning and high adaptability to new technologies and tools.
- Strong Team working spirit and relationship management skills.

EDUCATION & CERTIFICATIONS

BTech in Computer Science Engineering – India

TECHNICAL EXPERTISE

Programming Languages	XML, SQL, PL/SQL, Python Scripting
Databases	MS SQL Server, MySQL, Oracle,AWS- DynamoDB, SnowFlake
Database Development Tools	TOAD, PL SQL Developer, SQL*Loader, MYSQL, DBeaver
ETL/Data warehousing Tools	Informatica, SSIS, RedShift,DynamoDB,Load utilities
Test automation tools	POSTMAN, API tools, Swagger
Project Methodologies	Agile/Scrum, Waterfall
AWS Technologies	Lambda,S3,SQS Queue, STEP Function, Kinesis stream, Cloud watch,Event bridge, Spark, EMR, DynamoDB, RedShift, Python
Build tools	Atlassian, Jenkins, GITHub, Source Tree,
Reporting (BI) tools	Power BI, SSRS,Dashboards,Jira
Packages	MS Office (MS Access, MS Excel, MS PowerPoint, MS Word, Office 365.

PROFESSIONAL EXPERIENCE

Client: Bank of America – Plano, TX

Jun '22 – Till date

Data Engineer

Responsibilities:

- Working in all phases of Software Development Life Cycle (SDLC) that include Requirement gathering, Analysis/Design, Documentation, Development, Deployment, Testing and Productionizing.
- Responsible for Agile application development, Daily stand-up meetings, Sprint Retrospective, Sprint Planning, Story Estimates, PI Planning, Backlog Grooming, and customer reporting backlogs(bugs).
- Participating in backlog grooming with the product team in understanding the business requirements to provide the DEV Efforts ,Dev Design, Env. Setup, Cross teams dependencies.
- Participating in Peer reviews, design review, code reviews, mentor other developers to ensure the quality of code and design.
- Work on day to day operational issues submitted by customers through tools like JIRA, UARS (User access request system), Incidents.
- Creating on-demand tables on S3 files using Lambda Functions and AWS Glue using Python and PySpark.
- Performed end-to-end Architecture and implementation assessment of various AWS services like Lambda's, SNS, Event Bridge, Redshift, S3, Athena, Glue and Kinesis.
- Analyze and interpret all complex data on all target systems, responsible for performing backloads, unloading of data in AWS Redshift and AWS Sync to copy over the data between environments.
- Extensively working with .yaml files on serverless framework and maintaining all the AWS services through AWS cloud formation templates across repositories.
- Created various Lambda functions at different levels of data such as querying from Raw bucket, copy to hive partition, Copy to data lake - ETL layer, Redshift copy, redshift merge.
- Implemented data security measures, including encryption and access controls, to safeguard sensitive data.
- Participated in on-call rotations to provide 24/7 support for critical data pipelines.
- Working on ETL data loads for Finance, Credit cards and loans applications for various credit status and make sure all the Programmable fields, calculated fields are coded as per business logic as per requirements.
- Orchestrated data ingestion pipelines into the data lake, including batch and real-time (streaming) data sources.
- Validating full load, incremental loads, calculated fields and their logic used to load data among various stages. Performed data validations at every stage of data migration.

- Extensive experience with server less deployments using Yaml files across various repositories.
- Creating and inserting data into Daily Hive partitions and respective redshift tables for dynamically inserting data into data tables using partitioning and s3 bucketing for RAW - Data lake - Enriched Layers.
- Created and maintained Pub/Sub models for generating pre signed URLs for different client partners and maintaining subscription.
- Worked extensively on data provisioning, data sharing among redshift clusters based on user needs.
- Performed migration of Several Databases, NTS (IBM), Connect and Web servers from on-premises environments to AWS Cloud - RBIC where data is maintained in data marts.
- Created ETL packages with different data sources (SQL Server, Postgres, NTS) and loaded the data into target tables by performing different kinds of transformations using SSIS.
- Maintaining the loaded data mart into Power BI reports based on User requirements. Maintained different Analytical dashboards which will maintain Supplier, retailer, customer and broker data.

Environment - SSMS, SQL Server, T-SQL, AWS RedShift, DBeaver, Datalake, JIRA, Git, Confluence, SharePoint, AWS Glue jobs, AWS Lambda, SSRS, S3, SQS, SNS, Event bridge, Python, Pyspark, powerBI

Client: Change Healthcare – Fort Worth, TX

Sep' 19 - May '22

Data Engineer

Responsibilities:

- Working in all phases of Software Development Life Cycle (SDLC) that include Requirement gathering, Analysis/Design, Documentation, Development, Deployment, Testing and Productionizing.
- Responsible for Agile application Development, planning meetings, daily stand up meetings, Sprint Retrospective, Sprint Planning, Story Estimates, PI Planning, Backlog Grooming and customer reporting backlogs(bugs).
- Worked extensively on Medicaid / Medicare data to fulfil their needs.
- Have extensive knowledge on PBM business process of Members, Prior Authorizations, Accumulations, copay, co-insurance, Deductibles, Pharmacy, Plan, provider, Sponsor/ Patient Pay, CoPay, OutOfPacket & Family Coverage, Coupons, discounts etc.
- Implemented data encryption, access controls, and audit logging to ensure data security and compliance with industry regulations (e.g., GDPR, HIPAA).
- Extracted claims, members, providers, users, EOB, Programs, drug, pharmacy data in the form of NCPDP files and uploaded the claims data.
- Worked on EDI files, familiar with X12 - 835 ,837 Claim transactions between Provider and Payor and EDI 999 Acknowledgement.
- Working with different feeds files of.csv, json, .gz, .md5 formats and with backend python scripts (.py) to load the file to preprocessing stage, stage, target tables into Redshift.
- Designed and Implemented data pipelines in AWS to Extract, Transform and load Data from several sources including SQL, PostGres, NRT etc.
- Develop the backend python code by creating .py scripts and verification of data flow into AWS DynamoDB, AWS Redshift and SQL server databases to find out correct data for testing and to test the backend process of the developed code.
- Working on ETL data loads for Pharmacy, Chain and Claim billing info loads for various Claim status and make sure all the Programmable fields, calculated fields are coded as per business logic as per requirements.
- Majorly working on API services to communicate with claim processor & pricing Orchestrator using POSTMAN Rest API tool with different collections.
- Optimizing code for better performance on BI dashboards for performance and efficiency.

- Performed migration of several Databases, Application and Web servers from on-premises environments to Microsoft AWS Cloud environment.
- Supporting development team to move to CICD (Continuous integration and Continuous Delivery) process.
- Creation of Confluence pages documentation for the developed work and provided production handovers.

Environment – AWS EC2, S3, AWS Lambda, Python, JIRA, Bit Bucket, Confluence, Informatica, T-SQL, PySpark, DataLake, Power BI

Client: Neiman Marcus Group – Irving, TX
Data Engineer / ETL tester

Jul '18 – Sep '19

Responsibilities:

- Responsible for Agile application Development, planning meetings, daily stand up meetings, Sprint Retrospective, Sprint Planning, Story Estimates, PI Planning, Backlog Grooming and customer reporting backlogs(bugs).
- Working on ETL data loads for various Sales, Customer, Promotions files to make sure all the Programmable fields, calculated fields are coded as per business logic as per requirements.
- Architecting and Implementing the migration of on-premises data from MySQL database engine onto AWS Redshift data warehouse.
- Creation of database objects like tables, views, materialized views, stored procedures using AWS cloud tools like Snowflake, AWS SQS Queue, lambda's, AWS Glue, Airflow etc.
- Conducted performance tuning and optimization of Spark applications, identifying and resolving bottlenecks to improve overall data processing speed.
- Involved in ETL code using Informatica in order to meet requirements for Extract, transformation, cleansing and loading of data from source to target data structures.
- Worked closely with data scientists to enable real-time data ingestion and processing for machine learning models using Kafka.
- Worked with Snowflake cloud data warehouse and AWS S3 bucket for integrating data from multiple source systems which include loading nested JSON formatted data into snowflake table.
- Creating and inserting data into Hive tables for dynamically inserting data into data tables using partitioning and bucketing for EDW tables and historical metrics.
- Verification of Tableau dashboards, reports, and visualizations based on business requirements.
- Complete functional and Regression testing of Data Warehouse/Business Intelligence (DW/BI) applications for the data flowing through the EDA-AWS Snowflake environment.
- Implementing interactive filters, drill-downs, and dynamic features in Tableau dashboards.
- Creating calculated fields, parameters, and data connections to ensure data accuracy and integrity in tableau tool.
- Working on Audit Metadata tables for defining DAG schedules, dependencies & ingestion entries with proper file notations match with .json file definitions in Bitbucket.
- Creation of Confluence pages documentation for the developed and tested work.

Environment – AWS EC2, S3, MySQL, Snowflake Cloud, AWS Lambda, Python, JIRA, Bit Bucket, Confluence, SharePoint, AWS Glue jobs, Step Functions, SQS Queue, Tableau, DBever
