EDUCATION

University of Southern California

Master of Science in Analytics (STEM) GPA 3.82/4.00

Los Angeles, US

Jan 2021—Dec 2022

University of Nottingham (Ningbo China)

Bachelor of Finance Accounting & Management GPA: 3.62/4.00

Ningbo, China & Nottingham, UK

Aug 2015—Jul 2019

SKILLS

Programming Language & Tools: Python, R, SQL, Tableau, Power Query, Power BI, Google Analytics, Stata, SPSS, Excel (VBA), Engenius, JMP, Salesforce.com, Fibery, Zapier, Make.com

Knowledge: ETL; Exploratory Data Analysis (EDA); A/B Testing; Predictive Analytics; Machine Learning; Time Series Analysis; Natural Language Processing (NLP); Marketing Analytics

PROFESSIONAL EXPERIENCE

Heal the Bay

Santa Monica, CA

Associate Data Specialist | Python, Zapier, Salesforce, Tableau

Aug 2023 — Present

Data Analyst Intern | Python, Salesforce, Power BI

Feb 2023 — May 2023

Data Integration and Data Management:

- Built 15 **data integration** workflows and **Python** scripts on Zapier to **automate ETL** from Benevity, Stripe, Shopify, Acuity, Eventbrite and Classy to Salesforce. This improved campaign performance visibility and eliminated 70% data entry work for stakeholders.
- Optimized 10 old Zapier automation workflows, which reduced Zapier's monthly average error rate from 17% to 2%.
- Designed **data pipelines** and transferred 120,000 + marine debris records (from 2001 to 2023) from Google Sheets, Data Tracker App and Tide App to Salesforce. This increased beach program data integrity by 60%, and provided a unified view of marine trash data.
- Defined duplicate and field validation rules to improve overall data accuracy in Salesforce, reducing duplicate data by 30%; Created formular fields as meaningful metrics, which simplified reporting and derived insights to program managers.
- Further explored Salesforce Nonprofit Success Pack features, tailored the Program Management Module to streamline aquarium education program tracking and set up General Accounting Units to enable more effective fund management in Salesforce.

Data Reporting and Analytics:

- Created reports and dashboards in **Salesforce and Tableau** to track fundraising, monitor project progress, and analyze revenue trends, granting the development team a holistic view of revenue and resulting in approx. 15% increase in quarterly individual donation.
- Processed and analyzed the Diversity, Equity, and Inclusion (DEI) Survey responses on **Power BI**. The findings helped the outreach team reach a 25% program engagement rise in the number of participants in Los Angeles County.

WorkFaith Connection

Houston, TX

Data Analyst Intern | Python, Make.com (Integromat), Fibery

Mar 2023—Jun 2023

- Created **automation scenarios** on Integromat to transfer Event Attendance records to Fibery, which saved 50% **ETL** processing time.
- Developed **dashboards** in Fibery workspace to analyze help desk capacity, education program popularity and customer acquisition.

Endeavour. Inspired Infrastructure

Darien, CT

Data Management Intern | Power BI (DAX & Power Query)

Jun 2022—Aug 2022

- Pulled project records from Autodesk to **Power BI**; Transformed data using **Power Query**, developed text translation function in Power BI and identified database relationships among 90+ entities to improve report quality.
- Created key performance indicators using **DAX**; Developed 2 sets of near **real-time** tracking **dashboards**, which enabled more efficient cost management and project health evaluation, and increased stakeholder information transparency by 40%.

PROJECTS

Credit Card Transaction Fraud Prediction | Python; Supervised Learning

- Data Cleaning, Feature Engineering & Feature Selection:** Cleaned the Credit Card Transaction Dataset, built 500+ new variables from original dataset fields to capture fraud signals, and selected top 20 features using filter & wrapper.
- Trained Classifiers (**logistic regression, decision tree, random forest, XGBoost and MLP**), tuned hyperparameters, and predicted fraud transactions. The best-performing model achieved a 57.5% fraud detection rate.

New York Property Tax Fraud Detection | Python; Unsupervised Learning

- Processed the NY property dataset with over 1 million records, constructed data quality report, and created 90+ new variables.
- Reduced dataset dimensions via **principal component analysis (PCA)** and kept top 7 components; Built **unsupervised learning** algorithms by applying heuristic algorithm & auto encoder, computed fraud scores and captured unusual property records.

Yelp Review Usefulness Prediction | Python; NLP; Supervised Learning

- Extracted a subset of 50k+ records from the public open Yelp Review Dataset, cleaned & formatted text contents, vectorized text using TFIDF & Word2Vector, created corpus structural features and performed sentiment analysis.
- Trained Classifiers (**logistic regression, decision tree, random forest, and stacked models**) on 7 different feature combinations and predicted review usefulness. The best model achieved accuracy of 70%.
