

Gaurav Chaudhary

BI Engineer

Gauravmchaudhary@gmail.com | +1 (716) 520-6438 | Buffalo, NY | LinkedIn | GitHub

SUMMARY

BI Engineer with 4+ years of experience delivering scalable reporting and analytics solutions across healthcare, life sciences. Experienced in building BI dashboards, analytics data models, and ELT pipelines that convert complex operational and financial data into actionable insights. Strong collaborator with business and finance stakeholders, enabling self-service analytics, standardized KPIs, and efficient decision-making in both enterprise and consulting settings.

SKILLS

SQL & Data Modeling: Advanced SQL (CTEs, window functions, query optimization), dimensional modeling, star schema, Kimball methodology, fact & dimension design

Analytics Engineering & ELT: dbt transformations, metrics modeling, analytics-ready datasets, incremental models

Data Warehousing: Snowflake, BigQuery, Redshift; performance tuning and warehouse optimization

ETL / Orchestration: Airflow-based pipelines, ELT tools, reliable data ingestion and scheduling

BI & Data Visualization: Tableau, Power BI, Looker; KPI design, dashboard performance optimization, self-service analytics

Programming: Python (Pandas, NumPy) for data analysis and automation

Data Quality & Testing: dbt tests, data validation, freshness and anomaly checks

Version Control & Collaboration – Git workflows, code reviews, CI/CD awareness

Stakeholder Communication: Translating business requirements into scalable analytics solutions

PROFESSIONAL EXPERIENCE

AbbVie Inc.

Jan 2026 – Present | Buffalo, NY, USA

BI Engineer

- Designed and delivered Power BI/Tableau dashboards integrating data from enterprise clinical, commercial, and operational systems, improving KPI visibility and reducing manual reporting cycles by ~40%.
- Built SQL-based data marts and semantic models with standardized KPI definitions in collaboration with business stakeholders, increasing consistency, accuracy, and trust in performance reporting.
- Implemented self-service BI solutions with optimized datasets and intuitive visualizations, reducing ad-hoc reporting requests by ~30% and improving analytics turnaround time.
- Strengthened BI data quality and reliability by adding validation checks, automated refresh processes, and documentation, supporting compliant and repeatable reporting in a regulated enterprise environment.

University at Buffalo Recreation

Oct 2025 – Dec 2025 | Buffalo, NY, USA

BI Engineer Intern (Part-Time)

- Built and maintained Power BI dashboards tracking facility usage, peak hours, and program participation across 5+ recreation locations, enabling operations leadership to optimize schedules and improve space utilization.
- Created SQL-based reporting datasets by integrating membership systems, swipe/access logs, and Excel reports, reducing manual data preparation by ~35% and improving consistency of operational reporting.
- Partnered with recreation managers to define and automate 10–12 core KPIs (attendance, class fill rates, staffing coverage), reducing ad-hoc report requests by ~25% and supporting weekly and semester-level planning.

Accordion

BI Engineer

Oct 2022 – Jun 2024 | Hyderabad, TG, India

- Architected scalable analytics data models and ELT pipelines using SQL, dbt, and cloud data platforms to transform raw financial and operational data into trusted analytics marts, accelerating insight delivery by ~35% and supporting advanced analytics during PE value-creation initiatives.
- Delivered end-to-end analytics solutions including KPI dashboards and forecasting datasets for healthcare and staffing clients, enabling real-time performance monitoring across 10+ business units and supporting improvements in revenue cycle operations and operational efficiency.
- Enhanced BI platforms through automation and self-service capabilities, including natural-language querying features in Power BI and Tableau, reducing reporting turnaround times by ~50% and enabling CFO stakeholders to make faster, data-driven decisions.
- Strengthened data quality and governance in post-acquisition environments by building reliable semantic layers, standardized transformations, and integration workflows, improving accuracy and consistency of financial and operational reporting.
- Collaborated with Accordion and Merilytics Data & Analytics teams to deliver custom analytics solutions for FP&A, budgeting, and operational insights, supporting multiple PE-backed engagements and accelerating time-to-value for portfolio companies.

Junior BI Engineer

Jun 2021 – Sep 2022 | Hyderabad, TG, India

- Developed and delivered interactive Power BI and Tableau dashboards for PE-backed portfolio companies by integrating financial and operational data from ERP, CRM, and spreadsheet sources, reducing manual reporting effort by ~60% and improving real-time KPI visibility for leadership teams.
- Designed and automated a centralized BI reporting framework for a healthcare client with multiple lines of business, enabling consolidated performance monitoring across entities and accelerating decision-making for operational planning and growth initiatives.
- Led SQL-based data integration and transformation efforts for fragmented datasets supporting industrial staffing acquisitions, enabling standardized financial reporting and improving the accuracy of FP&A and long-range planning processes.
- Enhanced existing BI environments by creating data marts and semantic layers that supported self-service analytics for finance stakeholders, resulting in a 40%+ reduction in ad-hoc reporting requests and increased dashboard adoption.
- Partnered with finance, operations, and analytics teams on BI assessments and dashboard delivery, applying visualization and automation best practices to support PE value-creation objectives across multiple client engagements.

PROJECTS

Sales Performance & Customer Insights Dashboard

- Designed a centralized star schema data model and transformed raw sales data using SQL, leveraging AI/LLM tools to accelerate query generation, validation, and error resolution during data modeling and ETL development.
- Built interactive BI dashboards using AI-assisted dashboard design (auto-generated visuals, KPI recommendations, and DAX/SQL optimization), enabling faster and more accurate tracking of sales performance, customer behavior, and regional trends.

Post-Acquisition Analytics Platform

- Architected scalable analytics data models and ELT pipelines using dbt and SQL, leveraging AI-assisted development to standardize financial and operational reporting across multiple post-acquisition environments.
- Delivered analytics-ready data marts with embedded data quality testing, improving data consistency and accelerating insight delivery by ~35%, while enabling advanced analytics use cases such as forecasting and value-driver analysis.

EDUCATION

University at Buffalo

Master of Science (MS) in Data Science

Aug 2024 – Dec 2025

NIT Tiruchirappalli

Bachelors in Mechanical Engineering

Jul 2017 – May 2021
