Plano, TX

SUMMARY

Senior Data Engineer with 10+ of experience in data engineering and cloud solutions, I specialize in Azure Cloud, Snowflake, dbt and SAP technologies. I possess deep expertise in designing, developing, and optimizing data solutions across cloud platforms and enterprise data systems. My experience includes building scalable data pipelines, managing data warehouses, and leveraging modern data engineering tools to enable data-driven decision-making. Passionate about driving business outcomes through innovative data strategies and cross-functional collaboration.

EXPERIENCE

Senior Data Engineer

Eviden, an Atos Company

2022 - Present Plano, TX

- Architected scalable data solutions and designed robust dbt data models to support the creation of data products in Snowflake, aligned with business needs that enabled business intelligence insights, resulting in a 25% lift in data-driven decision-making.
- Facilitated the business transformation for clients in the implementation and execution of the modern Business Intelligence (BI) and Data Mesh strategy to facilitate data migration from traditional databases to the Modern Data Warehouse.
- Collaborated on the design and implementation of an enterprise data warehouse, resulting in a 30% reduction in data processing time through the optimization of query execution in Snowflake.
- Established data governance policies in Snowflake reducing the data inconsistencies by 40%.
- Developed and implemented a comprehensive ELT process using Azure Data Factory for a Data Mart that consolidated data from multiple sources, significantly improving information accessibility and quality for end users.
- Designed and implemented reusable code libraries in Azure Data Factory that streamlined development workflows, driving a 30% improvement in operational efficiency.
- Built and managed data products within a data mesh framework, applying product management principles to prioritize business-driven insights.
- Employed dbt (Data Build Tool) to design and implement data models, macros, and pre/post hooks within Snowflake, ensuring robust, scalable, and maintainable data transformation processes.
- Collaborated with cross-functional teams to assess the impact, dependencies, and risks of proposed changes, ensuring alignment with business objectives and compliance with technical standards.

Senior Data Engineer / Lead BI Consultant

Visual BI Solutions

2014 - 2022 Chennai, TN, India

- Designed cloud-based data solutions in Snowflake and optimized ETL pipelines using Azure Data Factory, enhancing data ingestion efficiency and significantly reducing processing times.
- Contributed to the migration of terabyte-scale data from on-premises to Snowflake, reducing overall costs by 15%.
- Led several high-impact data migration and implementation projects, migrating legacy systems to SAP BW/4HANA, including both greenfield and brownfield implementations, resulting in a 40% reduction in reporting turnaround time for clients.
- Experienced in using Git Integration within dbt for version control, facilitating collaboration and ensuring the consistency of data models across landscapes.
- Possess strong expertise in installing and enhancing Business Content and the Administrator Workbench for Data Modeling, leveraging BI data models and LO Cockpit to deliver tailored data solutions.
- Provided ongoing support and training that increased end-user adoption rates by 30%, significantly enhancing the overall customer experience and ensuring sustained value from SAP BW investments.

EDUCATION

Bachelor of Engineering in Electronics and Information

Kumaraguru College of Technology

2010 - 2014 Coimbatore, TN, India

SKILLS

Technologies

Azure Snowflake SAP dbt

Data

Data Architecture Data Modernization

Data Mesh Data Warehouse ETL

Data Modeling Data Transformation

Data Engineering Data Analytics

Programming

SQL TSQL ABAP

Client Relations Customer Engagement

Problem Solving

KEY ACHIEVEMENTS

Client Relations

Consistently delivered high-quality results that led to positive feedback from customers, who expressed a strong desire for continued collaboration.

Snowflake COE Contributor

Contributed to blogs, POCs, and ADF Accelerators that demonstrated our expertise and solutions, driving increased customer acquisition and satisfaction.

BW COE Practice Head

Spearheaded the publication of 40+ blogs on BW4HANA achieving higher engagement on company platforms compared to other technologies.

Leadership Excellence Award

In recognition of exemplary leadership and strategic initiative in BW4HANA COE, thereby enhancing knowledge dissemination and thought leadership within the industry.

KEY CUSTOMER HIGHLIGHTS

USI Insurance Services

Responsibilities - Senior Data Engineer

📅 2022 - Present 📍 New York, US

- Migrated client data from traditional database systems to a modern data warehouse architecture using Snowflake, while optimizing ELT processes with Azure Data Factory, enhancing data accessibility, scalability, and analytics capabilities for actionable insights.
- Architected data products within a data mesh framework to integrate data from multiple sources into Snowflake using Azure Data Factory and dbt for the end-users driving a 25% increase in data-driven decision making.
- Designed and implemented scalable data architectures within Snowflake, enabling efficient data ingestion and processing that reduced query response times by up to 60%, enhancing analytics performance.
- Deployed strategic initiatives to optimize compute and storage costs, significantly enhancing the financial efficiency of data warehouse operations and maximizing resource utilization across the enterprise.
- Designed and implemented data validation rules and automated data checks across multiple domains, reducing data errors by 50%.
- Collaborated with key stakeholders, including executives and teams from Product, Data, and Design, to resolve data-related technical issues while establishing best practices for data modeling and supporting their data needs.
- Developed and delivered training programs for team members and stakeholders, increasing proficiency in Snowflake and fostering a culture of data-driven decision-making within the organization.

CONA Services LLC (Coke One North America)

Responsibilities - Data Engineer

📅 2019 - 2021 📍 Atlanta, US

- Contributed to the successful migration of on-premises HANA data warehouse solutions to Snowflake, employing advanced expertise in data architecture and cloud migration strategies to ensure a seamless transition and enhanced data accessibility.
- Designed and implemented data pipelines in Azure Data Factory that optimized development workflows, resulting in a 25% improvement in operational efficiency.
- Leveraged dbt for data transformation and modeling within Snowflake, establishing best practices that significantly enhanced data accessibility and facilitated efficient reporting for end-users.
- Conducted extensive performance tuning and optimization of Snowflake queries, achieving a 45% increase in processing speed and ensuring efficient resource utilization across the platform.
- Successfully transitioned Tableau dashboards from SAP HANA to Snowflake, ensuring seamless functionality and continuity of critical analytics tools throughout the migration process.

A.O.Smith Corporation

Responsibilities - Lead BI Consultant

📅 2018 - 2019 📍 Wisconsin, US

- Spearheaded the design and implementation of sophisticated data models in SAP BW/4HANA, utilizing best practices in data architecture to optimize data flow and enhance reporting capabilities, which resulted in a 30% improvement in query performance and increased efficiency in data management processes.
- Successfully migrated the Vendor Spend Analysis data models to HANA optimized models, improving performance and analytical capabilities. This accomplishment not only strengthened client trust but also opened up new opportunities to expand and establish an offshore team.
- Developed and deployed HANA optimized data models to deliver tailored solutions in Material Management, Customer Management, Cost Reporting, and Vendor Spend Analysis, thereby enhancing data accessibility and analytical insights.
- Executed comprehensive system upgrade validations for BW and ECC systems, conducting thorough issue analysis and implementing solutions to ensure timely system releases for business users.
- Conducted in-depth analysis of existing process chains to identify issues and optimization opportunities, resulting in the development of enhanced process chains that improved performance and accelerated data availability for business users.
