EDUCATION

The University of Texas at Dallas – Dallas, Tx

Aug 2024 - May 2026

Master of Science in Business Analytics & Artificial Intelligence – GPA : 3.79

Mumbai University - Mumbai, India

Aug 2018 - May 2022

Bachelor of Engineering in Information Technology – GPA : 3.70

TECHNICAL SKILLS

Programming: Python (Pandas, NumPy, Scikit-learn, Django), SQL, R, Java, C++, C, Machine Learning

Business Intelligence: Tableau, Power BI, Dashboard Development, KPI Reporting, Executive & Business Intelligence Reporting

Databases: PostgreSQL, Snowflake, SQL Server (Academic), MySQL

Data Engineering: ETL/ELT, DBT, Data Modeling, Fact Dimension Tables, Star Schema, Data Validation, Data Integrity, Data Mining, Data Transformation, Data Wrangling

Analytics: Business Intelligence, Data Visualization, Statistical Analysis, Business Requirements Analysis, Root Cause Analysis, Trend Analysis, Predictive Analytics, Process Improvement, SLDC, Analytical Methods

Tools: Excel (Pivot Tables, Power Query), Git, JIRA, Postman, REST APIs, AWS, Azure, Agile Environment

WORK EXPERIENCE

Tata Consultancy Services – Data & Business Intelligence Analyst

Jul 2022 – Jun 2024

- Partnered with cross-functional stakeholders to gather requirements and built an internal data platform using Python (Django, Pandas), SQL, and Power BI, boosting operational efficiency by 55% across 200+ users.
- Engineered ETL/ELT pipelines to extract, perform data transformation and data wrangling, and validate data from 5+ heterogeneous sources, achieving 99% data accuracy and powering real-time analytics dashboards for business teams.
- Diagnosed process bottlenecks using Python (NumPy, Pandas) and SQL, applying analytical methods and root cause analysis to reduce task completion time by 30%.
- Built 3 interactive Power BI dashboards tracking 15+ KPIs, converting complex datasets into executive-ready visualizations that directly informed business decisions.
- Validated SQL data processing and business logic across 1M+ records, detecting inconsistencies and implementing corrective solutions that improved data quality by 35%.
- Performed API testing on 10+ applications using Postman and Charles Proxy, reducing critical production defects by 65%.
- Analyzed business requirements and executed 500+ UAT test cases with a 95% defect detection rate, ensuring product releases met business and technical specifications.
- Operated in Agile/Scrum environments using JIRA to track and resolve 200+ defects, achieving 40% faster resolution times.

The Art of Living - Data & Business Analysis Intern | Python, AutoCAD, Google Earth

Aug 2019 - Jun 2020

- Designed a mobile data-collection app using Python and Dart, automating field workflows and reducing manual data entry by 60% while improving data accuracy by 40%.
- Built predictive machine learning models in Python to forecast resource requirements, reducing operational costs by 25% and delivering insights to 15+ engineers.
- Analyzed 5,000+ environmental data points to uncover drought trends and water scarcity patterns across Maharashtra, supporting a large-scale watershed management project.

PROJECTS

NYC Yellow Taxi Analytics | Python, Snowflake, DBT, Power BI, SQL, Git

- Ingested 20.8M+ NYC TLC trip records across 6 months into Snowflake data warehouse using Python ETL pipeline with automated parquet file downloads from TLC open data API, processing 3.4M+ records per month.
- Architected a multi-layer DBT project with 7 models across staging, intermediate, and marts schemas; implemented 41 data quality tests achieving 100% pass rate, ensuring referential integrity and null checks across all dimensions.
- Engineered advanced SQL transformations in Snowflake to segment trip corridors (Intra-Manhattan, To/From Manhattan, and Outer Borough), break down fare components, and identify time-of-day demand patterns.
- Built a Power BI DirectQuery dashboard connected live to the Snowflake MARTS schema, presenting KPI reporting on 18M trips, \$531.95M in revenue, peak-hour demand, and borough-level distribution across 5 interactive visuals.

TMDB Streaming Content Analytics | Python, DBT, Snowflake, Tableau, Git, SQL, REST API

- Designed and executed a Python API ingestion pipeline fetching 10,000 movies from TMDB REST API with automated pagination across 500 pages and rate-limit handling; loaded structured data into Snowflake RAW schema.
- Built 6 DBT transformation models with 15 data quality tests (100% pass rate); engineered composite engagement score weighting popularity (40%), average rating (40%), and vote volume (20%) across 10K+ titles.
- Published an interactive Tableau Public dashboard with data visualizations covering average ratings across 19 genres, decade-level popularity trends, and the top 10 movies by engagement score, translating analysis into actionable content performance insights.

E-Commerce Churn Intelligence | Python, PostgreSQL, Scikit-learn, Tableau, Git, SQL, Pandas

- Ingested 1.5M+ rows from Kaggle Olist Brazilian e-commerce dataset into PostgreSQL across 9 normalized tables including orders, customers, sellers, and reviews; built indexes, analytics views, and stored procedures for query optimization.
- Engineered RFM (Recency, Frequency, Monetary) features for 93,395 customers; defined churn label using 180-day re-purchase threshold achieving 68.6% baseline churn rate; resolved data leakage by removing label-derived features from training set.
- Trained and compared 3 ML models (Random Forest, Gradient Boosting, Logistic Regression) using 5-fold cross-validation; Gradient Boosting achieved ROC-AUC 0.67 with 72% accuracy on held-out test set of 18,679 customers.
- Saved 93K risk-scored predictions (High/Medium/Low segments) to PostgreSQL analytics schema and published Tableau dashboard visualizing churn by Brazilian state, risk segment distribution, and probability score histogram.
