

Lokesh Mylavarpu
Sr Full Stack .Net Developer

lokeshmylavarapu8@gmail.com / +1 (972)-908-0820/ <https://www.linkedin.com/in/lokesh0412/>

Professional Summary

- Senior Full Stack .NET Developer with 9+ years of experience designing, developing, and delivering scalable enterprise applications across Financial Services, Mortgage, Healthcare, and Real Estate domains.
- Extensive experience building cloud-native applications using C#, .NET Framework, .NET Core, .NET 8, ASP.NET Core, ASP.NET MVC, Web API, Entity Framework Core, Dapper, and LINQ.
- Strong expertise in designing microservices-based architectures, developing RESTful and SOAP services, and implementing scalable distributed systems using modern software engineering principles.
- Hands-on experience developing responsive and interactive web applications using Angular, React, Blazor, TypeScript, JavaScript, HTML5, CSS3, and Bootstrap, delivering intuitive user experiences.
- Proficient in building and deploying cloud-native solutions on Microsoft Azure and AWS, leveraging services including Azure App Services, AKS, Azure Functions, Azure Service Bus, Docker, Kubernetes, OpenShift, and Helm.
- Experienced in implementing event-driven architectures using Apache Kafka and RabbitMQ to enable reliable, asynchronous communication between enterprise applications.
- Strong background in designing secure enterprise applications using OAuth 2.0, OpenID Connect (OIDC), JWT Authentication, Azure Active Directory, and TLS, ensuring compliance with organizational security standards.
- Expertise in database design, SQL development, stored procedures, query optimization, indexing, and performance tuning using SQL Server and Oracle for high-volume transactional systems.
- Well-versed in applying SOLID principles, Design Patterns, Clean Architecture, Repository Pattern, CQRS, and Dependency Injection to develop maintainable, reusable, and scalable software solutions.
- Hands-on experience implementing CI/CD pipelines using Azure DevOps, Jenkins, GitHub Actions, Git, and Docker to automate application build, testing, and deployment across multiple environments.
- Proven ability to collaborate with solution architects, product owners, business analysts, QA engineers, and DevOps teams within Agile/Scrum environments, ensuring successful delivery of complex enterprise projects.
- Experienced in conducting code reviews, mentoring junior developers, troubleshooting production issues, and driving continuous improvements in application performance, security, and software quality.
- Strong analytical, problem-solving, and communication skills with a consistent track record of delivering reliable, high-performance solutions that align with business objectives and enhance customer experience.

TECHNICAL SKILLS

Programming Languages: C#, .NET Framework, .NET Core 6/7/8, ASP.NET Core, ASP.NET MVC, SQL, JavaScript, TypeScript, HTML5, CSS3, JSON, XML

Frontend Technologies: Angular (8–17), React.js, Blazor, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, jQuery

Backend Technologies: ASP.NET Core, ASP.NET MVC, ASP.NET Web API, RESTful APIs, SOAP Web Services, Entity Framework, Entity Framework Core, Dapper, LINQ, ADO.NET, Dependency Injection, SignalR, Minimal APIs, gRPC

Architecture & Design Patterns: Microservices, Cloud-Native Development, Event-Driven Architecture, SOLID Principles, Object-Oriented Programming (OOP), Design Patterns, Clean Architecture, Repository Pattern, CQRS, Domain-Driven Design (DDD), N-Tier Architecture

Cloud Technologies: Microsoft Azure, Azure App Services, Azure Functions, Azure Kubernetes Service (AKS), Azure Service Bus, Azure SQL Database, Azure Storage, Azure Key Vault, Azure Monitor, AWS EC2, ECS, EKS, Lambda, S3, RDS

Containerization & Orchestration: Docker, Kubernetes, OpenShift, Helm

Databases: Microsoft SQL Server, Oracle, PostgreSQL, Azure SQL Database, MongoDB

DevOps & CI/CD: Azure DevOps, GitHub Actions, Jenkins, Git, Docker, SonarQube, Octopus Deploy

Testing & API Tools: xUnit, NUnit, MSTest, Moq, Swagger (OpenAPI), Postman

Version Control & Project Management: Git, GitHub, Azure Repos, Bitbucket, Jira, Azure Boards

Methodologies: Agile Scrum, Kanban, SDLC, Test-Driven Development (TDD), Continuous Integration (CI), Continuous Deployment (CD)

PROFESSIONAL EXPERIENCE

Fannie Mae, Reston, VA

Feb 2025 — Present

Senior Full Stack .NET Developer

Responsibilities:

- Designed, developed, and maintained cloud-native enterprise applications using C#, .NET 8, ASP.NET Core, Web API, and Angular, supporting mortgage underwriting, loan servicing, and financial reporting platforms.
- Architected and implemented microservices-based applications following Clean Architecture, SOLID principles, and Domain-Driven Design (DDD), improving application scalability, maintainability, and fault isolation.
- Developed secure RESTful APIs and SOAP services for integrating loan origination, servicing, payment processing, and third-party financial systems while ensuring high availability and low latency.
- Built responsive Single Page Applications (SPA) using Angular, TypeScript, HTML5, CSS3, Bootstrap, and RxJS, delivering enhanced user experience for internal operations and business users.
- Designed asynchronous event-driven workflows using Apache Kafka, enabling reliable communication between loan processing, underwriting, document management, and compliance services.
- Developed high-performance backend services using ASP.NET Core, Entity Framework Core, Dapper, and LINQ, optimizing complex business logic and reducing API response times.
- Built reusable middleware components, dependency injection modules, and shared libraries to standardize development practices across multiple enterprise applications.
- Implemented secure authentication and authorization using OAuth2, OpenID Connect (OIDC), JWT tokens, Azure Active Directory, and TLS encryption, ensuring compliance with enterprise security standards.
- Developed and optimized SQL Server stored procedures, functions, indexes, and complex queries for mortgage servicing applications, significantly improving database performance.
- Integrated applications with Oracle and SQL Server databases while implementing data validation, transaction management, and performance tuning for high-volume financial transactions.
- Containerized enterprise applications using Docker and deployed microservices to Azure Kubernetes Service (AKS) and OpenShift, improving scalability and deployment consistency across environments.
- Created and managed Helm charts for automated Kubernetes deployments, enabling simplified application versioning and environment configuration.
- Leveraged Azure App Services, Azure Functions, Azure Service Bus, Azure Key Vault, Azure Storage Accounts, and Azure Monitor to build secure and scalable cloud-native solutions.
- Developed CI/CD pipelines using Azure DevOps, GitHub Actions, and Jenkins, automating build, testing, security scanning, containerization, and production deployments.
- Implemented automated unit testing using xUnit, NUnit, and Moq, increasing code quality and improving regression testing coverage.
- Utilized Swagger/OpenAPI and Postman for API documentation, validation, and integration testing across internal and external applications.
- Participated in architectural discussions, performed technical feasibility analysis, and proposed cloud-native design solutions aligned with enterprise technology standards.
- Conducted comprehensive code reviews, enforced coding standards, and mentored junior developers on best practices involving microservices, design patterns, and secure coding.
- Collaborated closely with business analysts, product owners, architects, QA engineers, and DevOps teams within Agile/Scrum environments to deliver high-quality software releases.
- Implemented centralized exception handling, structured logging, and application monitoring using Azure Application Insights and Serilog, reducing production troubleshooting time.
- Designed caching strategies using Redis to improve application performance and reduce repetitive database access for frequently used business data.
- Developed file processing and document management modules supporting mortgage document uploads, validation, storage, and retrieval using Azure cloud services.
- Integrated enterprise applications with external financial systems through REST APIs, SOAP services, and secure messaging protocols while maintaining transactional integrity.

- Improved overall application performance by optimizing API execution, database queries, asynchronous processing, and resource utilization, resulting in faster response times and enhanced system reliability.
- Supported production deployments, investigated critical production issues, performed root cause analysis, and implemented long-term fixes to ensure uninterrupted business operations.

Omnicell, Fort Worth, TX
2025

Nov 2023 – Jan

Senior .NET Full Stack Developer

Responsibilities:

- Designed, developed, and enhanced enterprise healthcare applications using C#, .NET 7, ASP.NET Core, Web API, Angular, and SQL Server to support medication management, pharmacy automation, and clinical workflow solutions.
- Built scalable microservices for medication dispensing, prescription validation, inventory tracking, and patient care workflows using ASP.NET Core following SOLID principles and Clean Architecture.
- Developed secure RESTful APIs enabling seamless integration between pharmacy management systems, Electronic Health Records (EHR), inventory applications, and third-party healthcare platforms.
- Designed responsive and reusable user interfaces using Angular, TypeScript, HTML5, CSS3, Bootstrap, and RxJS, improving usability and workflow efficiency for pharmacists and clinical staff.
- Implemented event-driven communication using Apache Kafka to process prescription updates, medication inventory changes, and real-time healthcare notifications.
- Integrated healthcare applications with HL7 and FHIR standards to facilitate secure exchange of patient demographics, medication orders, laboratory information, and clinical records across enterprise healthcare systems.
- Developed backend services using Entity Framework Core, Dapper, LINQ, and SQL Server, ensuring high-performance data access and efficient transaction management.
- Created reusable service libraries, middleware components, and common business modules to standardize development across multiple healthcare applications.
- Implemented authentication and authorization using OAuth2, OpenID Connect (OIDC), JWT Tokens, Azure Active Directory, and Role-Based Access Control (RBAC) to protect sensitive healthcare information.
- Developed and optimized SQL Server stored procedures, indexes, views, and complex queries, significantly improving application response time and database performance.
- Built secure file management services for uploading, validating, and storing patient documents, prescriptions, and pharmacy records using Azure Blob Storage.
- Containerized enterprise applications using Docker and deployed microservices to Azure Kubernetes Service (AKS), improving scalability, portability, and deployment efficiency.
- Managed Kubernetes deployments using Helm charts while supporting multiple development, QA, UAT, and production environments.
- Leveraged Azure cloud services including Azure App Services, Azure Functions, Azure Service Bus, Azure Key Vault, Azure Monitor, and Azure SQL Database to develop resilient cloud-native healthcare applications.
- Developed automated CI/CD pipelines using Azure DevOps and Jenkins, reducing deployment effort while improving release quality and consistency.
- Implemented automated unit and integration testing using xUnit, NUnit, Moq, Postman, and Swagger, ensuring high application reliability and API quality.
- Integrated enterprise applications with third-party healthcare vendors through REST APIs, SOAP services, secure file transfers, and message-based integrations.
- Collaborated with business analysts, product owners, QA teams, architects, and DevOps engineers to translate healthcare business requirements into scalable technical solutions.
- Participated in Agile ceremonies including sprint planning, backlog refinement, daily stand-ups, sprint reviews, and retrospectives while consistently delivering high-quality software.
- Conducted peer code reviews, identified performance bottlenecks, enforced coding standards, and mentored junior developers on .NET development best practices.

- Implemented centralized exception handling, logging, and monitoring using Serilog, Azure Application Insights, and Azure Monitor, reducing production issue resolution time.
- Optimized application performance through asynchronous programming, caching strategies, SQL tuning, and efficient API design, improving overall system responsiveness.
- Supported production releases, investigated critical incidents, performed root cause analysis, and delivered permanent fixes to ensure uninterrupted healthcare operations.

Discover Financial Services, India

Feb 2021 – July 2023

.NET Full Stack Developer

Responsibilities:

- Developed and maintained enterprise banking applications using C#, .NET Core 6, ASP.NET Core, ASP.NET MVC, Web API, Angular, and SQL Server, supporting credit card processing, customer servicing, and digital banking operations.
- Designed and implemented microservices-based applications following SOLID principles, Repository Pattern, Dependency Injection, and Clean Architecture, improving modularity and system scalability.
- Built secure RESTful APIs and SOAP services to integrate payment gateways, customer management systems, fraud detection platforms, and third-party banking applications.
- Developed responsive Single Page Applications (SPA) using Angular, TypeScript, HTML5, CSS3, Bootstrap, and JavaScript, enabling seamless digital banking experiences across desktop and mobile platforms.
- Designed and implemented event-driven solutions using Apache Kafka, enabling real-time transaction processing, payment notifications, and customer account updates.
- Developed backend business components using ASP.NET Core, Entity Framework Core, Dapper, LINQ, and ADO.NET, ensuring efficient processing of high-volume financial transactions.
- Created reusable middleware components, shared libraries, and common utility services to standardize development across multiple enterprise applications.
- Implemented authentication and authorization using OAuth2, OpenID Connect (OIDC), JWT, and Azure Active Directory, ensuring secure access to customer-facing and internal banking applications.
- Developed complex SQL Server and Oracle stored procedures, views, functions, triggers, and optimized queries to improve application performance and support high-volume transactional workloads.
- Integrated enterprise applications with Oracle and SQL Server databases while ensuring ACID-compliant transaction management and data consistency across financial systems.
- Built Docker images for enterprise applications and deployed microservices on Azure Kubernetes Service (AKS), improving deployment consistency and application scalability.
- Leveraged Azure App Services, Azure Functions, Azure Service Bus, Azure Storage, Azure Key Vault, and Azure SQL Database to build resilient cloud-native banking applications.
- Automated build, testing, and deployment activities using Azure DevOps, Jenkins, Git, and CI/CD pipelines, reducing deployment time and minimizing release risks.
- Developed unit tests using xUnit, NUnit, and Moq, while performing API validation using Postman and documenting services through Swagger/OpenAPI.
- Collaborated with solution architects and business analysts to convert business requirements into scalable technical designs while participating in application architecture discussions.
- Performed peer code reviews, enforced coding standards, identified code optimization opportunities, and mentored junior developers on enterprise .NET development practices.
- Worked closely with QA engineers to resolve defects, perform integration testing, and support user acceptance testing (UAT) activities before production releases.
- Implemented centralized logging, exception handling, and application monitoring using Serilog and Azure Application Insights, improving production support efficiency.
- Optimized API performance, database indexing strategies, asynchronous processing, and application caching mechanisms, reducing response times for critical banking operations.

- Supported production deployments, investigated high-priority incidents, performed root cause analysis, and implemented permanent fixes to maintain application stability.
- Participated in Agile ceremonies including sprint planning, daily stand-ups, backlog grooming, sprint reviews, and retrospectives while consistently delivering sprint commitments.
- Collaborated with cross-functional teams including infrastructure, DevOps, security, and database administrators to ensure successful deployment and ongoing support of enterprise banking solutions.

Cardinal Health, India

Oct 2018 – Dec 2020

.NET Developer

Responsibilities:

- Developed and maintained enterprise healthcare applications using C#, ASP.NET MVC, ASP.NET Web API, .NET Framework 4.7, SQL Server, and JavaScript, supporting pharmaceutical distribution, inventory management, and healthcare supply chain operations.
- Designed and developed RESTful Web APIs to integrate warehouse management systems, order processing applications, inventory platforms, and third-party logistics providers.
- Participated in migrating legacy monolithic applications into modular service-oriented components, improving application maintainability and deployment flexibility.
- Built responsive user interfaces using Angular, HTML5, CSS3, Bootstrap, JavaScript, and jQuery, improving operational efficiency for warehouse and customer service teams.
- Developed reusable business components using C#, Entity Framework, LINQ, and ADO.NET, reducing duplicate code and simplifying future enhancements.
- Designed SQL Server database objects including stored procedures, views, triggers, indexes, and functions while optimizing complex queries for high-volume inventory transactions.
- Integrated enterprise applications with Oracle and SQL Server databases to ensure accurate inventory synchronization, order fulfillment, and shipment processing.
- Developed SOAP and REST-based services for communication with external vendor systems, ERP applications, and internal healthcare platforms.
- Assisted in implementing asynchronous messaging using RabbitMQ for inventory updates, shipment notifications, and order processing workflows.
- Participated in containerizing selected applications using Docker and collaborated with DevOps teams to support deployments on Kubernetes development environments.
- Worked with Azure App Services and Azure SQL Database to support cloud-hosted applications and improve system availability.
- Implemented authentication and authorization using OAuth2, JWT Authentication, and Role-Based Access Control (RBAC) to secure enterprise healthcare applications.
- Developed automated deployment pipelines using Azure DevOps, Git, and Jenkins to streamline build and release processes across development and QA environments.
- Performed unit testing using NUnit and collaborated with QA teams during integration testing, defect resolution, and User Acceptance Testing (UAT).
- Used Swagger/OpenAPI and Postman for API documentation, testing, and validation during development and system integration activities.
- Collaborated with business analysts and solution architects to gather requirements, prepare technical design documents, and estimate development efforts.
- Participated in Agile Scrum ceremonies including sprint planning, daily stand-ups, sprint reviews, and retrospectives while consistently delivering sprint objectives.
- Conducted peer code reviews, followed coding standards, and implemented best practices for secure, maintainable, and high-quality software development.
- Monitored production applications, investigated application issues, optimized SQL queries, and implemented performance improvements to enhance system stability.
- Worked closely with cross-functional infrastructure, database, and DevOps teams to support production deployments and ensure successful software releases

CoreLogic, India

Sept 2017 to Aug 2018

Junior .NET Developer

Responsibilities:

- Assisted in developing web-based business applications using C#, ASP.NET MVC, .NET Framework, SQL Server, HTML5, CSS3, JavaScript, and jQuery for real estate and property management solutions.
- Developed and enhanced application modules using ASP.NET MVC, implementing business logic, form validations, and reusable components according to business requirements.
- Created responsive web pages using HTML5, CSS3, Bootstrap, JavaScript, and jQuery, improving usability across multiple browsers and devices.
- Developed RESTful APIs and maintained existing SOAP services for communication between internal applications and third-party systems.
- Designed and implemented database objects including stored procedures, views, triggers, and SQL queries using Microsoft SQL Server.
- Utilized Entity Framework and LINQ for database interactions, CRUD operations, and object-relational mapping.
- Participated in bug fixing, application enhancements, code refactoring, and performance optimization activities across multiple development sprints.
- Assisted senior developers in implementing secure authentication, session management, and role-based authorization within enterprise applications.
- Worked with Git for source code management, version control, branching strategies, and collaborative software development.
- Participated in unit testing, integration testing, and defect resolution while ensuring application functionality met business requirements.
- Worked closely with QA analysts, business users, and senior developers to troubleshoot production issues and implement timely fixes.
- Participated in Agile Scrum ceremonies, including sprint planning, daily stand-up meetings, sprint reviews, and retrospectives.
- Prepared technical documentation, deployment notes, and user guides to support application maintenance and knowledge sharing.
- Supported production deployments, monitored application performance, and resolved post-release issues under senior developer guidance.

Education: Bachelors in ECE, Lovely Professional University, India – 2017

Masters in computer and information science, Southern Arkansas University, Magnolia Arkansas – 2025
