SUMMARY

Data Analytics Engineer with over **4 years of experience** building automated data pipelines, scalable cloud warehouses, and enterprise business intelligence models. Expert at using dbt, Python, and advanced SQL to transform raw engineering data into clean, production-ready analytics. Proven track record of optimizing big data infrastructure via PySpark and Airflow while delivering high-impact dashboards in Tableau and Power BI. Skilled at establishing robust data quality frameworks that eliminate operational errors, unify corporate metrics, and drive measurable business growth.

SKILLS

Data Transformation, Modeling & Scripting: dbt, Advanced SQL (Complex CTEs, Window Functions, Query Performance Tuning), Python (Pandas, NumPy, Scipy), R (Statistical Computing).

Cloud Data Warehousing & Architecture: Snowflake & Databricks, Google BigQuery AWS Redshift, Dimensional Modeling (Star and Snowflake Schemas), Data Lakehouse Design (Delta Lake).

Data Ingestion, Pipelines & Orchestration: Pipeline Automation, Apache Airflow, Automated Ingestion, REST APIs, Python Scripting, Change Data Capture (CDC).

Distributed Processing & Big Data Infrastructure: Apache Spark, PySpark, Distributed Computing, Data Streaming Frameworks (via Apache Kafka), Memory Management Optimization.

Business Intelligence & Data Storytelling: Interactive Dashboard, Tableau, Power BI, Microsoft Fabric, Looker, Semantic Layer Design, Unified Corporate Metrics Configuration.

Data Governance, Quality & DevOps: Version Control, CI/CD Pipelines, Git, GitHub Actions, Data Quality Validation, Schema Evolution Management, Data Lineage Tracking.

EXPERIENCE

Avnet, United States | Data Analytics Engineer

October 2025 – Present

- Architected automated end-to-end data pipelines using Apache Airflow and Fivetran to ingest raw data into Snowflake, eliminating **120+ hours** of monthly manual data operations and accelerating reporting delivery by **72 hours**.
- Engineered modular data transformation models using dbt (Data Build Tool) and advanced SQL (CTEs, Window Functions), optimizing star schemas to slash cloud database compute costs by **\$115,000** annually and improve query times by **35%**.
- Constructed interactive dashboards in Tableau and Power BI for 3 key business units, designing a unified semantic layer that standardized corporate metrics and reduced executive report generation time by **60%**.
- Optimized high-throughput data processing workflows using PySpark running on Databricks clusters, successfully scaling the infrastructure to process over **500M+** rows of daily log data with zero system latency.
- Implemented automated data validation frameworks using Great Expectations and dbt-tests within a CI/CD pipeline via GitHub Actions, reducing downstream reporting anomalies and dashboard bugs by **42%**.

Adons Softech, India | Data Analyst

June 2021 - December 2023

- Designed and maintained cloud storage architectures across Google BigQuery and AWS Redshift to support global operations, migrating 15 terabytes of legacy data and improving enterprise data accessibility across departments by **50%**.
- Developed custom automated extraction workflows via Python scripting and REST APIs to fetch high-frequency financial data, increasing data ingestion reliability by **28%** across critical business lines.
- Designed a unified corporate metrics matrix within Microsoft Fabric and Looker, centralizing business logic for over 150 corporate users and cutting down cross-departmental reporting discrepancies by **80%**.
- Partnered directly with product and finance operations teams to parse user retention trends and revenue leaks using Pandas and NumPy, which successfully uncovered system drop-off points and recovered **\$45,000** in operational cost leakages.
- Instituted schema evolution management and end-to-end data lineage tracking using Git, ensuring complete data governance transparency and achieving a **95%** compliance rating during internal system data audits.

EDUCATION

Master of Science in Computer Science

January 2024 – December 2025

Northern Arizona University

Flagstaff, AZ

PROJECTS

Cloud Data Platform Migration & Clickstream Warehouse Architecture

- Engineered a multi source data ingestion pipeline using Apache Airflow, Apache Spark, and Snowflake to aggregate over **100** million daily raw unstructured clickstream assets into structured lakehouse environments.
- Formulated optimized data transformation models and advanced dimensional schemas within Snowflake, leveraging complex SQL optimization and staging workflows to increase analytical querying speed by **37%** across enterprise reporting layers.

Real Time Financial Ingestion & Multi Channel Analytics Framework

- Constructed an event driven data processing architecture leveraging Apache Kafka, PySpark, PostgreSQL, and Databricks, enabling continuous streaming workflows that accelerated actionable data asset availability by **43%** for reporting teams.
- Developed a comprehensive data aggregation layer within Databricks incorporating schema evolution enforcement and robust statistical validation methodologies to increase reporting forecast precision by **29%** across critical business lines.
