PROFESSIONAL SUMMARY

Data Analyst with 4+ years of experience delivering analytics and measurement solutions across financial services, healthcare, and IT consulting environments. Strong hands-on experience with SQL, Python, Tableau, Power BI, and statistical analysis across customer, transactional, and operational datasets. Experienced in A/B test analysis, controlled comparisons, hypothesis testing, segmentation, KPI measurement, and root-cause analysis to identify meaningful performance changes and support business decisions. Skilled at automating analytical workflows, validating data and experiment results, building clear data stories, and translating complex analysis into actionable recommendations for technical and non-technical stakeholders.

TECHNICAL SKILLS

Analytics & Experimentation: Statistical Analysis, A/B Testing, Hypothesis Testing, Control vs. Treatment Analysis, Experimental Analysis, Statistical Significance, Confidence Intervals, Conversion Analysis, Segmentation, Trend Analysis, Root-Cause Analysis

Programming & Data Analysis: SQL, Python, R, Pandas, NumPy, Exploratory Data Analysis, Data Manipulation, Analytical Automation

BI & Data Storytelling: Tableau, Power BI, Excel, DAX, Power Query, KPI Development, Interactive Dashboards, Scorecards, Data Visualization, Executive Reporting

Data Platforms & Engineering: Snowflake, SQL Server, PostgreSQL, Oracle, Databricks, ETL, Data Transformation, Data Validation

Business & Collaboration: Customer Analytics, Performance Analysis, Operational Analytics, Requirements Gathering, Stakeholder Management, Client-Facing Analytics, Jira, Agile, Git, Alteryx

WORK EXPERIENCE

JP Morgan Chase& Co., Austin, Texas, USA | Senior Data Analyst | Oct 2025 - Current

- Analyzed customer, transaction, and operational datasets using SQL and Python to identify conversion, activity, and process-performance drivers, helping business teams prioritize improvement opportunities based on measurable trends.
- Evaluated A/B test results by validating treatment and control populations, reviewing sample characteristics, comparing conversion and behavioral outcomes, and assessing statistical significance before communicating findings to stakeholders.
- Applied segmentation, variance analysis, and statistical techniques to investigate KPI changes across customer groups, channels, and processes, separating meaningful behavioral shifts from data-quality issues and normal variation.
- Built reusable analytical datasets by joining and transforming data across Snowflake and SQL Server, standardizing metric definitions and improving consistency between source data, analytical outputs, and downstream reporting.
- Automated recurring SQL and Python analysis, validation checks, and reporting workflows, reducing manual reporting effort by approximately **30%** and improving consistency and turnaround time.
- Developed Tableau and Power BI reporting that connected conversion, volume, turnaround time, and operational KPIs with segment-level trends, enabling stakeholders to move from performance monitoring to root-cause investigation.
- Partnered with business, data, and technology teams to define analytical requirements, validate metric logic, investigate ambiguous questions, and translate analytical findings into practical recommendations.

AbbVie Inc., Austin, Texas, USA | Data Analyst | May 2024 - Aug 2025

- Analyzed patient-support, engagement, and operational datasets using SQL and Python to identify behavioral trends, service patterns, and performance drivers affecting business and program outcomes.
- Conducted exploratory and statistical analysis across customer and program segments, evaluating performance differences and identifying patterns requiring deeper investigation.
- Structured analytical datasets for controlled comparisons by defining relevant populations, validating source records, standardizing metrics, and preparing reliable group-level analysis.
- Built Tableau and Power BI dashboards combining engagement, service-level, volume, and operational KPIs, giving cross-functional teams a consistent view of performance trends and emerging exceptions.
- Automated recurring data preparation, validation, and reporting workflows using SQL, Python, and Alteryx, reducing manual analysis effort by approximately **25%** and allowing greater focus on deeper analysis.
- Reconciled source records against reporting outputs and investigated anomalies through SQL-based validation, improving confidence in the data used for operational decision-making.

- Presented analytical findings to cross-functional stakeholders, explaining KPI changes, underlying drivers, analytical limitations, and recommended areas for follow-up in clear business terms.

Infosys Limited, Hyderabad, India | Data Analyst | Jun 2021 - Jul 2023

- Delivered analytics solutions within an IT consulting environment supporting healthcare business processes, using SQL to analyze operational and transactional data across service volume, productivity, turnaround time, and performance metrics.
- Designed cohort and segment-level comparisons to identify differences in operational outcomes and investigate potential drivers of performance changes across business populations.
- Developed Power BI dashboards and KPI scorecards that enabled stakeholders to compare performance across groups, monitor trends, and investigate changes over time.
- Built reusable reporting datasets by joining source tables, applying transformation logic, and standardizing business metrics, simplifying downstream dashboard development and reducing duplicate reporting work.
- Optimized SQL queries and recurring transformation workflows to improve reporting reliability, consistency, and processing efficiency.
- Investigated reporting discrepancies by tracing records across source systems and transformation steps, identifying data-quality issues before results were delivered to business stakeholders.
- Collaborated with consulting teams and business stakeholders to clarify analytical requirements, validate metric definitions, explain analytical methodology, and communicate findings in business-friendly terms.

EDUCATION

Master of Science in Data Analytics

Indiana Wesleyan University (Jan 2024 - Aug 2025)

CERTIFICATIONS

- Microsoft Certified: Power BI Data Analyst Associate

PROJECTS

Experimentation & Incrementality Analysis

- Built a Python-based experimentation workflow to compare treatment and control populations, calculate conversion-rate differences, estimate lift, and evaluate statistical significance using hypothesis testing and confidence intervals.
- Performed segment-level analysis to identify differences in experiment response across customer populations and distinguish overall effects from variations within individual segments.
- Created Tableau visualizations showing treatment-versus-control performance, conversion trends, confidence intervals, and estimated incremental impact for non-technical audiences.

Customer & Transaction Analytics

- Used SQL and Python to analyze customer and transaction datasets, identifying conversion trends, behavioral patterns, cohort differences, and performance drivers across customer segments.
- Evaluated test-group differences and historical trends to distinguish meaningful behavioral changes from normal variation and identify areas requiring additional investigation.
- Developed Tableau reporting connecting customer behavior with business KPIs, translating analytical findings into clear recommendations for improving engagement and operational performance.
