

Pujitha T

DevOps Engineer

Email: pujithathogaru2@gmail.com | Phone: 949-346-1968 | Location: USA

Professional Summary

DevOps Engineer with 9+ years of progressive experience in automating, orchestrating, and optimizing mission-critical deployments in AWS and hybrid cloud environments. Proficient in building CI/CD pipelines using Jenkins, GitLab, and Azure DevOps with deep understanding of Docker, Kubernetes, Terraform, and Ansible. Adept at infrastructure-as-code, automation scripting (Python, Bash), and container orchestration for microservices. Hands-on with monitoring, alerting, and logging solutions using Grafana, Prometheus, ELK, and CloudWatch. Experienced in implementing blue/green, rolling deployments, and zero-downtime release strategies. Collaborated with developers, QA, and architecture teams to enhance product reliability and reduce delivery cycles. Strong understanding of Linux administration, networking, and cloud cost optimization.

Skilled in IAM, VPC, and security compliance (SOC2, HIPAA). Focused on automation, scalability, and system integrity across multi-cloud systems. Delivered multiple enterprise migration and modernization projects with high availability and resiliency. Committed to continuous improvement and DevSecOps practices.

Professional Experience

Goldman Sachs — DevOps Engineer (2023 – Present)

- Developed and maintained CI/CD pipelines in Jenkins and GitLab CI for cloud-based microservices.
- Automated AWS infrastructure provisioning using Terraform and CloudFormation templates.
- Implemented Kubernetes deployments and managed clusters on EKS for scalable application workloads.
- Built Helm charts for microservice deployments improving configuration reusability.
- Integrated Docker container builds with Jenkins for consistent runtime environments.
- Implemented security best practices for IAM, S3, and network configurations in AWS.
- Configured centralized logging using ELK and monitored system health via Grafana dashboards.
- Enabled canary and blue/green deployments to reduce production release risks.
- Automated image scanning and vulnerability detection with Trivy and Anchore.
- Collaborated with InfoSec to ensure compliance with organizational security standards.
- Reduced build times by 35% by optimizing pipeline parallelism and caching strategies.
- Implemented GitOps model using ArgoCD for infrastructure automation and rollback.
- Wrote Python scripts for system provisioning and monitoring event automation.
- Handled end-to-end release orchestration across multiple business environments.
- Conducted root-cause analysis and developed remediation scripts for CI/CD failures.
- Maintained 99.99% uptime and supported production during release windows.

Cigna — DevOps Engineer (Aug 2021 – Jul 2023)

- Supported AWS and Azure-based deployment automation across multiple product teams.
- Created Terraform modules for reproducible infrastructure provisioning.
- Integrated Jenkins pipelines with Dockerized applications for microservices deployment.
- Automated configuration management using Ansible and parameterized playbooks.

- Implemented monitoring with Prometheus, Grafana, and ELK for application visibility.
- Migrated legacy applications to Kubernetes improving system reliability and performance.
- Developed Python scripts for build validation and environment audits.
- Managed Git branching and release tagging strategies across multiple projects.
- Optimized container startup times reducing latency by 20%.
- Implemented SonarQube for continuous code quality assurance.
- Enhanced deployment frequency and rollback safety using Jenkins pipeline libraries.
- Participated in agile sprints and daily stand-ups to align DevOps initiatives.
- Designed secure CI/CD templates adhering to organizational compliance.
- Supported root-cause analysis for production incidents and optimized pipelines postmortem.
- Enabled centralized logging and cost monitoring for DevOps systems.

PNC Bank — DevOps Engineer (Dec 2020 – Jun 2021)

- Built CI/CD pipelines integrating Jenkins, Maven, and Nexus for microservices.
- Implemented Terraform-based infrastructure for AWS EC2, RDS, and Lambda services.
- Configured Docker and Kubernetes deployments with environment-specific Helm charts.
- Developed automation scripts in Bash and Python for build and release operations.
- Integrated security checks in CI/CD flow using SonarQube and OWASP dependency scanning.
- Monitored applications with CloudWatch, Prometheus, and custom Grafana dashboards.
- Supported high-availability configuration and scaling for critical banking systems.
- Collaborated with cross-functional teams during production deployments.
- Created rollback and validation procedures for production releases.
- Enabled S3 lifecycle rules for storage optimization and compliance.
- Automated SSL certificate renewals and Nginx load balancing configurations.
- Facilitated migration from legacy Jenkins to Jenkinsfile-based pipelines.
- Optimized deployment scripts for zero-downtime patch upgrades.
- Developed custom shell scripts for log rotation and cleanup automation.
- Implemented IAM policies to ensure least privilege principle across DevOps accounts.

Ford Motors — DevOps Engineer (Apr 2017 – Nov 2020)

- Designed Jenkins multi-branch pipelines for multiple microservices.
- Automated builds and deployments using Ansible and Maven integration.
- Created Docker images and managed Kubernetes workloads in GKE.
- Implemented log aggregation with ELK stack improving debugging efficiency.
- Maintained monitoring and alerting dashboards with Grafana and Prometheus.
- Performed infrastructure automation using Terraform for cloud resource provisioning.
- Supported on-prem and cloud migration strategies across teams.
- Integrated Nexus and JFrog Artifactory for artifact storage and version control.
- Improved release reliability by implementing automated smoke tests in pipelines.
- Enhanced system performance by tuning JVM and Nginx configurations.
- Collaborated with development and QA teams to streamline build validation steps.
- Implemented Git branching and tagging strategies for versioned releases.
- Created cron-based automation for daily system health checks.
- Participated in incident response and post-release validations.

- Trained new team members on CI/CD and environment setup.

Dell — Systems Engineer / DevOps (2016 – 2017 (Hyderabad, India))

- Configured Jenkins CI for automated builds and deployments of Java applications.
- Used Docker to containerize legacy applications reducing deployment time.
- Implemented infrastructure monitoring using Nagios and ELK stack.
- Created Terraform scripts for reproducible infrastructure provisioning.
- Developed Ansible playbooks for configuration management and patch automation.
- Monitored Linux servers for performance tuning and resource utilization.
- Supported production releases and rollback validation activities.
- Built and maintained Git repositories for configuration control.
- Created cron jobs for backup and cleanup operations.
- Coordinated with developers for release validation and environment fixes.
- Implemented security policies for SSH and system access management.
- Developed Python scripts for log analysis and reporting automation.
- Deployed internal tools on Tomcat and WebLogic servers.
- Worked closely with network teams for proxy and DNS configurations.
- Provided L2/L3 support for production infrastructure and deployment failures.

Technical Skills

DevOps & CI/CD: Jenkins, GitLab CI/CD, Azure DevOps, Bamboo, ArgoCD, Spinnaker, TeamCity

Containers & Orchestration: Docker, Kubernetes (EKS, AKS, GKE), Helm, Istio, OpenShift

Infrastructure as Code (IaC): Terraform, AWS CloudFormation, Ansible, Puppet, Chef

Cloud Platforms: AWS (EC2, S3, Lambda, EKS, RDS, CloudWatch), Azure, GCP

Monitoring & Logging: Prometheus, Grafana, ELK/EFK Stack, Splunk, CloudWatch, Dynatrace, AppDynamics, Datadog

Source Control & Versioning: Git, Bitbucket, GitHub, Gerrit

Security & Compliance: HashiCorp Vault, AWS IAM, KMS, SonarQube, Twistlock, Aqua Security, Snyk

Networking & Load Balancing: Nginx, HAProxy, F5, Route53, DNS, SSL/TLS

Scripting & Automation: Python, Bash, Groovy, PowerShell, Shell scripting

Build Tools: Maven, Gradle, Ant, Nexus, Artifactory

Operating Systems: Linux (RHEL, Ubuntu, CentOS), Windows Server

Databases & Messaging: PostgreSQL, MySQL, MongoDB, Kafka, RabbitMQ, Redis

Project Management & Agile: Jira, Confluence, ServiceNow, Agile/Scrum methodology

Education

Bachelor of Technology in Computer Science and Engineering

Jawaharlal Nehru Technological University, Hyderabad
