EDUCATION

Bachelor of Science in Data Science

Bellevue University - Bellevue, NE, 2025

Academic Honors: CGPA = 4.0

PROFESSIONAL SKILLS

- Statistical Quality Control
- Survey Data Analysis
- Outlier Management
- Class Imbalance Handling
- Time Series Forecasting
- Clustering Techniques
- Data Merging, Transformation & Annotation
- Data Retention & Archival
- ETL (Extract, Transform, Load) Processes
- Confusion Matrix & ROC-AUC Evaluation
- F1-Score & Recall Optimization
- Root Cause Analysis
- Dashboard Development
- CRM & Customer Data Management
- Stakeholder Engagement
- Excellent Communication
- Business Acumen
- Team Collaboration
- Technical Documentation & Writing

DATA ANALYST / DATA SCIENTIST

An analytical and detail-oriented professional with foundational expertise in quantitative analytics, statistical computing, and modeling techniques. Proficient in data wrangling, visualization, and exploratory analysis. Skilled in predictive modeling, regression, classification, and hypothesis testing. Experienced in working with large datasets to generate actionable insights. Seeking early-career opportunities to support business intelligence, reporting, and performance optimization through data-driven strategies across cross-functional environments.

PROFESSIONAL EXPERIENCE

Junior Data Analyst

Docsumo - Lewes, DE

Jan 2022 - Present

- Review and interpret documents, raising information extraction accuracy by 5% through automated quality monitoring.
- Enhance quality and validation accuracy via rule-based workflows in financial and insurance operations, achieving a 10% reduction in transformation time.
- Build and manage 4+ dashboards that deliver live sales and customer metrics, resulting in a 30% revenue boost and 20% improvement in forecasting efficiency.
- Compile weekly reports with performance summaries and visual insights that support trend analysis and operational planning.
- Write SQL queries and Python scripts to automate cleanup, transformation, and analysis workflows across multiple structured sources.
- Contribute to product testing cycles, evaluating user patterns and validation outcomes, that strengthen logic and optimize user experience.
- Monitor key performance indicators to identify process gaps across document types, client accounts, and automation stages.

ADDITIONAL EXPERIENCE

Financial Representative

Alorica - Omaha, NE

Aug 2020 - Dec 2021

- Responded to 100+ financial service inquiries daily, achieving a 95% first-contact resolution rate and reducing average resolution time by 10%.
- Maintained accurate records for over 10,000 customer accounts, supporting clean audits and smooth operational reporting.
- Developed a predictive model to identify irregular transaction activity that drove a 30% boost in fraud detection rates.

KEY PROJECTS

Project 1: Customer Churn Prediction

Apr 2025 - May 2025

- Predicted customer churn in telecom using ensemble models and deep learning techniques, following structured data exploration, feature engineering, and class balancing.
- Applied classification algorithms with oversampling methods to address data imbalance, evaluating performance using recall, F1-score, and confusion matrix, with a focus on fairness, ethical modeling, and interpretability.

- Project 2: Walmart Sales Forecasting**

May 2025 - Jun 2025
- Engineered regression and time series models using tree-based and statistical methods to forecast weekly department-level sales, improving inventory and staffing.
 - Implemented machine learning with predictive modeling and data merging to enhance sales forecasts, designing scalable systems across multiple stores to drive operational efficiency and workforce planning.

- Project 3: Predicting Default Credit Case Study**

Jun 2025 - Jun 2025
- Designed a model to predict 90+ day delinquencies in European credit data with a 0.172% default rate using targeted cleaning, outlier treatment, and advanced feature engineering.
 - Employed interpretability techniques to pinpoint credit usage and delinquency history as top predictors within an imbalanced dataset, leveraging explainability frameworks to understand and validate model behavior.

TECHNICAL SKILLS

Data Visualization:
Tableau | Power BI | Excel | Seaborn | Plotly | Matplotlib

Database Management:
SQL | Relational Databases (MySQL)

Programming Languages & Libraries:
Python (NumPy, Pandas, Scikit-Learn, Matplotlib, SHAP, LIME) | R (in progress)

Machine Learning & Deep Learning:
Random Forest | XGBoost | CatBoost | Neural Networks (applied in project work) | Logistic Regression | General Regression Models | Time Series Forecasting (ARIMA) | SMOTE for Imbalanced Data | Basic Applications in Fraud Detection

Development & Deployment Tools:
Jupyter Notebook | Git & GitHub | Streamlit (in progress)

CERTIFICATIONS & TRAINING

Udemy	
Pandas, Data Mining & Data Wrangling	In Progress
Data Visualization in Tableau & Power BI	Jun 2025
SQL using MySQL & Database Design	Jun 2025
Excel for Financial Analysts
