SUMMARY

Data Analyst with 5+ years of experience transforming complex data into actionable business insights across healthcare, education, retail, and manufacturing industries. Proficient in Python, Oracle SQL, Azure Databricks, Tableau, Power BI, Snowflake, and Looker Studio for large-scale data analysis, SQL query optimization, dashboard development, and business intelligence reporting. Experienced in building scalable ETL/ELT pipelines using dbt, SSIS, PySpark, Alteryx, and Azure Data Factory, integrating data from multiple sources, and developing interactive Power BI dashboards connected to enterprise data platforms. Strong expertise in data modeling, KPI reporting, statistical analysis, data visualization, and performance analytics, enabling data-driven decision-making and operational improvements. Proven ability to collaborate with cross-functional stakeholders, gather business requirements, and deliver high-quality analytics solutions in Agile environments while maintaining HIPAA compliance.

PROFESSIONAL EXPERIENCES

Data Analyst

Teladoc Health

Oct 2025-Present

- Developed an end-to-end Risk Stratification Model for 14K+ healthcare members as part of Population Health Analytics and Value-Based Care initiatives by engineering 50+ clinical, claims, pharmacy, laboratory, utilization, and Social Determinants of Health (SDOH) features using Snowflake SQL, Python, and Azure Databricks. Applied regression methodologies to classify members into low, medium, and high-risk cohorts, enabling care management, preventive interventions, and health outreach.
- Engineered healthcare analytics datasets by integrating EPIC EHR, Oracle Database, SQL Server, Snowflake, Amazon Redshift, and Databricks sources. Developed complex SQL queries, CTEs, window functions, stored procedures, and analytical transformations to support clinical reporting, quality measurement, risk analytics, and enterprise healthcare insights.
- Developed feature engineering logic using ICD-10-CM, CPT/HCPCS, LOINC, SNOMED CT, RxNorm, and NDC data to analyze chronic diseases, cardiometabolic conditions, diabetes, hypertension, behavioral health, utilization, inpatient admissions, readmission risk, medication adherence, and SDOH indicators supporting Population Health and Value-Based Care programs.
- Analyzed HEDIS measures and healthcare quality indicators to identify care gaps, preventive care opportunities, chronic disease management patterns, and quality-related risk factors used in member-level risk stratification.
- Designed a Medication Adherence Framework using NDC and RxNorm mappings to calculate rolling-window Proportion of Days Covered (PDC) metrics supporting HEDIS quality measures and care management initiatives.
- Built member-level Hypertension Risk Model datasets by integrating longitudinal claims, clinical encounters, laboratory results, medication history, and comorbidity indicators for outreach campaigns. Conducted provider performance and SOAP Note analysis using Oracle SQL and Amazon Redshift to identify care gaps, utilization trends, and quality improvement opportunities.
- Improved the External Referrals Dashboard by implementing referral lifecycle analytics, aging analysis, turnaround time metrics, and drill-through reporting for 80+ Clinical Operations users. Developed a 24/7 Healthcare Program Launch Monitoring Dashboard in Power BI to track operational KPIs, consultant activity, and program performance.
- Performed source-level validation between Tableau and Power BI reports, identified 12–15% reporting discrepancies, and collaborated with data engineering teams to standardize reporting logic and establish a trusted source of operational analytics.
- Supported migration of Coaching Outreach workflows from Amazon Redshift and MuleSoft Salesforce integrations to Teladoc's Pulse-Snowflake platform. Updated SharePoint coaching workflows by modifying intake fields and business rules, redesigned SQL transformations and member eligibility logic for 14K+ members, and automated outreach population generation for Diabetes, Hypertension, Weight Management, and Cardiometabolic Care programs, reducing campaign preparation effort by 60–70%.
- Migrated legacy analytics workflows from EDW and Amazon Redshift environments to Teladoc's centralized Pulse-Snowflake analytics platform by redesigning SQL transformations, validating source-to-target mappings, and optimizing data models using dbt. Implemented incremental models, automated testing, documentation, and scheduled job execution to improve data scalability, reliability, and accessibility for downstream analytics and reporting.

Senior Data Analyst

Hartford Healthcare

Jul 2025 – Oct 2025

- Developed automated ETL workflows using Python, SQL, and AWS Redshift to integrate healthcare datasets including EHR, claims, billing, and demographic data. Built analytical datasets and feature transformations to support clinical reporting, quality metrics, and population health analytics.
- Performed large-scale healthcare data analysis using Python (Pandas, NumPy), SQL, and Amazon Redshift to clean, transform, validate, and analyze clinical and claims datasets. Conducted data profiling, reconciliation, and root cause analysis to improve data quality and reporting accuracy.
- Optimized Amazon Redshift SQL queries, joins, aggregations, and window functions across 20M+ healthcare records, improving query performance, dashboard responsiveness, and analytics delivery for clinical and business users.
- Designed and developed interactive Tableau and Looker dashboards by creating analytical data models, calculated fields, dimensions, measures, filters, drill-down capabilities, and KPI visualizations. Delivered reporting solutions tracking readmission rates, patient throughput, utilization trends, cost efficiency, staffing metrics, and operational performance.
- Collaborated with clinical stakeholders, compliance officers, data engineers, and public health analysts to develop governance and compliance dashboards tracking HIPAA adherence, audit findings, AI model validation metrics, and operational KPIs.

Data Analyst

Illinois Institute of Technology, Chicago, IL

Jan 2024 – May 2025

- Built interactive Power BI dashboards connected to enterprise data warehouses, developing KPI scorecards, trend analysis, drill-down reports, and executive dashboards for university leadership.
- Designed Snowflake-based star schema models, optimized DAX calculations, and developed T-SQL stored procedures/views; engineered ETL pipelines using Snowflake SQL, PL/SQL Power Query to improve data reliability and cut reporting delays by 90%.
- Integrated Quantum Metric behavioral data to identify UI/UX drop-offs, partnering with IT to streamline academic portal workflows and increase student engagement by 15%;
- Customized KPIs and created drill-through reports and slicers to allow department heads to analyze performance trends across time, courses, and faculty groups for improved decision-making efficiency and resource allocation planning.
- Created comprehensive documentation covering data model structure, report navigation, KPI definitions, and dashboard usage guidelines, enabling 30+ faculty and administrators to independently explore insights and reduce support queries by over 50%.

Senior Data Analyst

Accenture - Henkel-US & German Client, India

Jan 2021 – Jul 2023

- Designed, developed, and optimized 50+ complex Oracle SQL and PL/SQL solutions including stored procedures, functions, packages, views, and database objects to support supply chain reporting, inventory analytics, procurement analytics, order management, and operational reporting for 200+ business users.
- Developed complex SQL queries using joins, CTEs, subqueries, CASE expressions, aggregate functions, and analytic functions to extract, validate, and transform 30M+ transactional records across supply chain domains including purchase orders, inventory transactions, sales orders, shipment data, supplier information, and fulfillment processes. Optimized Oracle SQL performance through indexing strategies, execution plan analysis, query tuning, and partitioning techniques, reducing query execution time by 35% and improving reporting refresh performance by 40% for supply chain dashboards and operational analytics.
- Developed 20+ automated PL/SQL scripts and SQL-based data extraction processes to support recurring supply chain reporting requirements including inventory availability, order fulfillment status, procurement metrics, supplier performance, and operational KPIs, reducing manual reporting effort by 25 hours per month.
- Created and maintained Oracle database objects including tables, views, indexes, sequences, and materialized views supporting scalable reporting solutions across inventory management, warehouse operations, procurement, and order lifecycle analytics.
- Performed SQL troubleshooting, data profiling, and validation across 150+ normalized Oracle tables, improving data integrity and reducing reporting discrepancies by 30%. Collaborated with business analysts, supply chain teams, procurement stakeholders, operations managers, and product owners to gather reporting requirements and translate complex business rules into scalable Oracle SQL and PL/SQL solutions, reducing turnaround time for new reports by 25%.
- Documented database schemas, supply chain data flows, SQL workflows, stored procedures, and reporting processes to support production operations, onboarding, and cross-team knowledge sharing for 15+ team members.

Data Analyst

Indobytes, Hyderabad, India

Jun 2019 – Dec 2020

- Collaborated with production and supply chain teams to gather requirements, translate business needs into structured data models, and support migration of operational reporting workflows from SQL Server to Oracle Database.
- Optimized Oracle SQL queries, stored procedures, and ETL workflows, and implemented automated job scheduling using SQL Server Agent/Oracle Scheduler to execute data loads, refresh reporting tables, and maintain timely dashboard updates. Reduced manual reporting effort by 20%, improved refresh performance by 15%, and ensured reliable delivery of operational insights.
- Developed migration documentation, source-to-target data mapping documents, workflow diagrams, and supported User Acceptance Testing (UAT), data validation, and issue resolution through Jira. Monitored scheduled ETL jobs, analyzed job failures, and performed troubleshooting.

SKILLS

- **Business Intelligence & Visualization:** Tableau, Power BI, Paginated Reports, Power BI Service, Advanced DAX, Power Query, Drill-through Reports, KPI Dashboards, Data Modeling, Row-Level Security (RLS), Deployment Pipelines, SSRS
- **Data Analytics & Data Science:** Exploratory Data Analysis (EDA), Statistical Analysis, Hypothesis Testing, A/B Testing, Predictive Analytics, Feature Engineering, Healthcare Analytics, Data Wrangling, Data Validation, Data Profiling, Model Evaluation
- **Programming & Query Languages:** Python, SQL, T-SQL, Oracle SQL, PL/SQL, DAX, R, C#, Snowflake SQL, Excel (Advanced)
- **Machine Learning & Libraries:** scikit-learn, pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook, TensorFlow, PyTorch
- **Data Engineering & ETL:** dbt, SSIS, AWS Glue, Azure Data Factory, PySpark, ETL/ELT Pipeline Development, Data Transformation, Workflow Automation, Python Automation Scripts, Data Integration
- **Databases & Cloud Platforms:** Snowflake, Microsoft SQL Server, Oracle, Amazon Redshift, AWS, Azure, Salesforce, MuleSoft
- **Healthcare & Governance:** HIPAA Compliance, ICD-10 Coding, Clinical Data Analytics, Population Health Analytics, Data Governance, Audit Readiness, Role-Based Access Control (RBAC), Documentation, Data Lineage
- **Collaboration & Project Tools:** Jira, Confluence, Git, SharePoint, Agile/Scrum, Cross-functional Collaboration, Stakeholder Management, Power Automate, Power Apps, Visual Studio

EDUCATION

Illinois Institute of Technology, Chicago, IL – **Master of Science, Computer Science**

May 2025
