EDUCATION

Stony Brook University, Stony Brook, NY

B.S. in Information Systems Engineering, Applied Mathematics & Statistics Aug 2021 – Dec 2025
(Expected)

- **Relevant Courses:** Quantitative Finance • Data Analysis & Statistics • Database Design • Object-Oriented Programming • Data Structures & Algorithms • Technical Communication • Human-Computer Interaction

SKILLS

Data & Database Technologies: SQL (Advanced querying, joins, CTEs), Relational Database Design (MS Access), MS Access → SQL ETL, Familiarity with cloud data-warehouse concepts (Snowflake principles through coursework)

BI & Visualization: Tableau (dashboards & storyboarding), Power BI (reports & interactive visuals), MS Excel (pivot tables, charts)

Programming & Analysis: Python (pandas, NumPy, matplotlib), R (linear models, hypothesis testing), SAS (ANOVA, regression)

Data Modeling & Tools: Regression Modeling, Hypothesis Testing, Data Cleaning & Transformation, Financial Modeling basics, Git, Microsoft Office Suite

PROJECTS

Financial Risk Modeling via Gene-Environment Interactions — R

- Developed and validated **linear regression models** combining environmental and genetic predictors; performed Box-Cox transformations and stepwise selection (BIC/adjusted R^2) to identify significant interactions.
- Executed model validation (k-fold cross-validation, residual diagnostics) to ensure robust statistical inferences—analogue to risk-modeling workflows used in financial analytics.
- Presented results in a concise report that distilled complex statistical findings into business-relevant narratives (e.g., “Interaction effect between variable X and variable Y increases predictive accuracy by 12%”).

Applied Statistical Analysis for Sales Performance | SAS, Excel

- Analyzed a dataset of sales, operational metrics, and durability test results; performed **ANOVA**, post-hoc comparisons (Tukey’s HSD), and regression modeling to uncover factors affecting product performance.
- Translated statistical outputs (p-values, confidence intervals) into “key takeaways” and **recommendations**—such as prioritizing production adjustments to improve ROI.
- Simulated real-world decision-support environment, crafting visual summaries in Excel and communicating insights to non-technical stakeholders.

Social Media Analytics Database | MS Access, SQL, Tableau

- Designed a **relational database schema** in MS Access with hierarchical forms to capture cross-platform user interactions and engagement metrics.
- Populated tables with multi-source social media datasets; wrote complex SQL queries (JOINS, GROUP BY, subqueries) to extract trends in post performance and audience growth.
- Built an end-to-end **Tableau dashboard** that visualized monthly engagement, top content categories, and growth drivers—translating raw data into actionable recommendations for hypothetical marketing teams to optimize ad spend.

EXPERIENCE

Office Assistant / Front Desk, *New Student Programs, Stony Brook University*

May 2024 – Present

- Manage high-volume inquiries (phone, email) and maintain front desk operations; ensure data accuracy in scheduling systems (Google Calendar, Outlook).
- Maintain and organize **digital and physical records** (student forms, attendance logs) with attention to data confidentiality—supporting data integrity for reporting on orientation attendance statistics.
- Collaborate with events team to track logistics (headcounts, equipment needs); develop and maintain an **Excel-based tracker** for event budgets and resource usage.
- Provide timely, data-driven summaries to program managers to inform staffing and material allocation for weekly orientation events.

Peer Assistant Leader, *New Student Programs, Stony Brook University*

May 2023 – May 2024

- Partnered cross-functionally with Admissions, IT, and Academic Affairs to organize orientation sessions for 150+ incoming students—coordinating schedules, room assignments, and resource allocation under tight timelines.
- **Streamlined communication workflows** by developing standardized templates (Excel macros, email scripts) that reduced manual scheduling time by ~30%.
- Collected and analyzed feedback survey data post-orientation using pivot tables and basic statistical summaries—surfaced trends in session satisfaction, enabling program leads to reallocate resources for next term.
- Presented findings in concise slide decks (PowerPoint) to administration, influencing decisions on session formats and staffing levels.

President, *Cardozo Hall Council*

Aug 2023 – May 2024

- Led a council representing 200+ residents; **tracked budget allocations** and forecasted event costs using Excel models—ensuring all 10+ hall events remained within budget while maximizing resident engagement.
- Liaised with university administration (Residence Life, Student Affairs) to gather requirements and present **quantitative evidence** (attendance trends, survey results) when advocating for funding and policy changes.
- Initiated a data-collection campaign to measure event satisfaction, creating simple Google Form surveys and summarizing results in charts to drive improvements in hall programming.
- Developed a conflict-resolution framework by analyzing incident reports, identifying common themes, and proposing policy adjustments to minimize repeat issues.

ADDITIONAL SKILLS

- **Leadership & Communication:** Strong verbal/written communication—experienced in presenting technical findings to non-technical audiences, mentoring new interns/peers, and writing concise executive summaries.
- **Cross-Functional Collaboration:** Proven ability to work with diverse teams (GTM, Operations, Finance, IT) to understand objectives, define KPIs, and deliver actionable insights.
- **Problem Solving & Initiative:** Thrive in ambiguous environments—self-start project from data sourcing to implementation; adept at prioritizing tasks to meet tight deadlines.
- **Tools & Concepts Exposure:** Familiar with the principles of modern data stacks (Snowflake, dbt, Sigma) through coursework and self-study; quick to learn new BI platforms and data-pipeline tools.
