PROFESSIONAL SUMMARY

Senior Business Analyst candidate with 3+ years of combined professional and graduate experience in product analytics, test-and-learn experimentation, and statistical modeling across consumer and financial contexts. M.S. in Business Analytics (Finance minor) + B.Tech in Engineering + McKinsey Forward Program selectee; fluent in SQL, Python, and SAS, with a track record of turning analysis into data-driven business recommendations that drive profitability for cross-functional partners.

EDUCATION

Purdue University, Daniels School of Business <i>M.S. Business Analytics & Information Management, Minor in Finance</i> • GPA: 3.7 / 4.00 — Honors: McKinsey Forward Program selectee (2025) — Coursework: Statistical Modeling, Experimental Design, Causal Inference, Finance.	West Lafayette, IN Aug 2025
Nirma University <i>Bachelor of Technology, Electronics & Communication Engineering</i>	Ahmedabad, India May 2023

TECHNICAL SKILLS

Programming & Data: SQL (complex queries, CTEs, window functions), Python (Pandas, NumPy, scikit-learn, statsmodels), SAS, Excel (advanced)
Analytics & Experimentation: A/B Testing (Test-and-Learn), Causal Inference, Regression, Segmentation, Cohort & LTV Analysis, Credit Risk Modeling, Pricing Analytics, Forecasting
BI & Data Stack: Tableau, Looker, Power BI, Snowflake, dbt, AWS
Business: Card Portfolio Analytics, P&L & Profitability Drivers, KPI Design, Strategy Development, Stakeholder Communication

EXPERIENCE

Aurat Aroma <i>Senior Product & Business Analyst</i> • Run test-and-learn experiments (A/B tests, regression) on 5M+ user interactions; segmentation and personalization strategies drove 20%+ engagement and conversion lift, informing pricing and CAC strategy with revenue partners. • Built KPI frameworks, cohort retention, and LTV analyses on Snowflake/Looker; framed findings as stakeholder memos and recommendations that shaped roadmap priorities and profitability decisions. • Wrote complex SQL across warehouses; partnered with engineering, finance, and GTM on data quality and decision-ready analysis.	Aug 2025 – Present Chicago, IL
Google <i>Data Scientist, YouTube Recommendation Systems</i> • Analyzed engagement patterns and CTR/watch-time metrics across 1,000+ YouTube channels (SQL, Spark); identified ranking strategy opportunities driving 25% precision lift on cold-start segments. • Designed offline/online experimentation framework; built structured stakeholder readouts on what worked, what didn't, and recommended next steps for product roadmap.	May 2025 – Aug 2025 Remote
Lockheed Martin <i>Data Scientist, Strategic Intelligence</i> • Led a 7-person team to design and deploy automated data pipelines (Spark, SQL, Selenium); cut manual collection effort 30% and accelerated reporting cycles. • Trained NLP and BERTopic classification models on text from 150+ countries, lifting analytical accuracy 40%; presented insights and recommendations to defense and investment leadership.	Jan 2025 – May 2025 Remote
Adani Renewables <i>Data Science Intern</i> • Built predictive and time-series models (XGBoost, Random Forest, LSTM) on operational sensor data at 92% accuracy; modeling cut error rates from 7% to 2% and prevented \$100K+ in downtime.	Jan 2024 – May 2024 Ahmedabad, India
Amazon <i>Operations Analytics Intern, Supply Chain</i> • Analyzed operational data across two e-commerce fulfillment centers using SQL and Excel; data-driven process recommendations adopted by leadership lifted quality 8% and productivity 3% within 3 weeks.	Jun 2023 – Aug 2023 Mumbai, India

PROJECTS

CreditScope <i>Credit Risk & Pricing Analytics</i> SQL, Python, SAS, XGBoost • Built a probability-of-default model on 1M+ lending records (logistic regression + XGBoost, AUC 0.82); segmented borrowers by risk tier. • Translated risk segments into pricing cutoffs and a stakeholder memo showing portfolio yield trade-offs across underwriting policies.	2026
PortfolioLens <i>Card Portfolio & Profitability</i> SQL, dbt, Snowflake, Tableau • Modeled cohort retention, attrition, and lifetime value across a simulated 500K-account card portfolio; built executive dashboards on profitability drivers. • Surfaced a segment driving 40% of charge-offs; proposed targeted underwriting and credit-line strategy changes.	2026
ExperimentHub <i>Pricing & Product Test-and-Learn</i> Python, GrowthBook, BigQuery • Designed an A/B testing library with CUPED variance reduction and Bayesian decision rules; cut average experiment runtime ~30% vs. fixed-horizon designs and documented as a playbook for product and pricing teams.	2025
