

EXECUTIVE SUMMARY

- **8+ years of Professional experience** as a **Business Data Analyst** in **IT industry** with solid understanding of **Agile Scrum** and **Waterfall Methodology**.
- Strong expertise across **Payments, Lending, Credit Risk, Treasury, Fraud Detection, KYC/AML, Regulatory Reporting, and Customer Onboarding** functions.
- Deep understanding of **banking regulations** (Dodd-Frank, Basel III, SOX) and financial products, including loans, deposits, derivatives, equities, and mortgages.
- Skilled in core banking concepts including **ACH, RTP, FedNow, SWIFT, MT/MX, ISO20022**, loan servicing, posting rules, and message transformations.
- Hands-on experience in **data governance, metadata management, data lineage, data quality frameworks**, and enterprise data standardization.
- Expert in **SQL, data analysis, data mapping, profiling, modeling (ERD, Star, Snowflake)**, and building KPIs to support analytics and regulatory controls.
- Adept at designing **process flows, sequence diagrams, interaction maps, prototypes, wireframes**, and UI mock-ups to align business and technology stakeholders.
- Proven ability in conducting **requirements workshops, stakeholder interviews, GAP analysis, SWOT analysis, cost-benefit and ROI analysis**, and impact assessments.
- Strong command of **Agile Scrum & Kanban**, with hands-on experience in story creation, story slicing, backlog grooming, release planning, sprint planning, reviews, and retrospectives.
- Skilled in **facilitating Scrum ceremonies**, removing impediments, driving adoption of Agile best practices, and supporting continuous integration/testing.
- Knowledgeable in **API requirements, JSON/XML payloads, REST/SOAP services, data transformations**, and multi-system integration patterns across upstream/downstream systems.
- Supported complex integrations across **core banking, CRM, AML, fraud systems, treasury, payments engines, and digital channels**.
- Strong background leading **UAT cycles**, including test planning, scenario creation, test case development, defect triaging, execution, and production checkout.
- Proficient with tools including **Jira, Azure DevOps, HP ALM/Quality Center, Power BI, Tableau, MS Project, Visio, Lucidchart, MS Office, Hadoop, SQL** and collaboration with cross-functional teams.
- Known for high attention to detail, documentation quality, data accuracy, and ensuring **audit readiness and regulatory compliance**.
- Experienced in delivering **workflow automation, process optimization, and system modernization** to improve operational efficiency and reduce manual effort.
- Demonstrated ability to partner with **QA, developers, architects, product owners, and business stakeholders** to ensure technical feasibility and business alignment.
- Developed/executed **test scenarios, Test Cases, Test Plans** and use cases to support the development team and business groups.
- Performed **requirements review** with the business stakeholders, developers, and **QA team**.
- Conducted **User Acceptance Testing (UAT)** and verification of performance, reliability and fault tolerance issues for **web based** and **client/server applications**.

EDUCATION

Master of Science in Management Information Systems, Cleveland State University, Cleveland, Ohio

Bachelor of Engineering in Information Technology, Vidyalankar Institute of Technology, India

Learning Power BI Desktop

Data Analytics Job Simulation

Scrum: Advanced

Advanced Power BI: DAX Language, Formulas, and Calculations

Advanced Snowflake: Deep Dive Cloud Data Warehousing and Analytics

PROFESSIONAL EXPERIENCE

TD BANK, CHERRY HILL, NJ

SEPT 22 – TILL DATE

BUSINESS DATA ANALYST

Project 1: Fraud Detection & Real-Time Transaction Monitoring Modernization

Led the modernization of TD Bank's enterprise fraud-monitoring platform to enhance real-time detection across CNP, ACH, Zelle, RTP, and wire transactions. Implemented behavioral analytics, optimized velocity checks, and refined fraud rules to reduce false positives and improve case-handling efficiency. Additionally, developed an end-to-end KYC/AML automation solution using Pega to streamline CDD and EDD processes, integrate third-party data providers for real-time screening, and embed rule-based triggers, audit trails, and SLAs to ensure full regulatory compliance and transparency.

Project 2: Payments Modernization – ISO20022 Migration & Real-Time Payments (RTP/FedNow) Enablement

Led TD Bank's payments modernization initiative, transitioning legacy MT formats to ISO 20022 MX messages while enabling Real-Time Payments (RTP) and FedNow capabilities. Redefined the payment lifecycle from initiation to settlement, enhancing compliance, liquidity

visibility, and operational efficiency. Collaborated with architecture and compliance teams to integrate enriched data structures, strengthen fraud and sanctions screening, and align with industry standards for seamless, high-speed payment processing

Responsibilities:

- Led **Agile ceremonies** and worked extensively within the **Agile/Scrum methodology**, driving continuous improvement across sprint planning, reviews, retrospectives, and daily standups.
- Prioritized and managed the **product backlog**, ensuring alignment with business value, dependencies, and sprint goals.
- Gathered and documented **business/technical requirements** for **fraud-rules configuration**, anomaly-detection models, **velocity thresholds**, and alert workflows.
- Performed **end-to-end MT → MX message mapping** for SWIFT, FedWire, RTP, and international payment flows, including gap analysis, field-level harmonization, and data-quality alignment with ISO20022 standards.
- Collaborated with **Treasury, Liquidity, Compliance, Operations, and Payment Strategy** teams to redesign posting logic, R-messages handling, returns/exceptions, and reconciliation workflows.
- Conducted validation and **QA** for **incoming/outgoing payment files**, ensuring compliance with ACH/NACHA rules, FedNow schemas, **RTP message structures**, and cross-border clearing requirements.
- Defined **API integration requirements** for payment orchestration, including acknowledgements, status updates (e.g., pain.002), notifications, audit logs, and downstream reconciliation.
- Led **UAT planning and execution** for the full payment lifecycle—initiation → validation → clearing → settlement → posting—coordinating business users, SMEs, and system integrators.
- Supported **FedNow and RTP go-live readiness** by preparing system configurations, testing scenarios, operational checklists, and runbooks for business/technical teams.
- Partnered with architecture, middleware, and data engineering teams to enable **real-time payment processing**, improve STP rates, and enhance exception visibility.
- Utilized tools including **SWIFT, ISO20022 MX, MT/MX Mapping Tools, RTP/FedNow frameworks, NACHA, Mulesoft, SQL, Swift Alliance, and Jira** for requirements, validation, and solution delivery.
- Analyzed customer spending patterns, **digital-banking behavior**, and **high-risk indicators** to develop and refine TD's fraud scenarios.
- Mapped end-to-end data flows and designed integration workflows across card processors, **ACH/NACHA, Zelle, RTP/FedNow**, and TD core-banking systems.
- Collaborated with **Fraud Strategy, Risk, Compliance, and Data Science teams** to tune model thresholds and reduce false positives.
- Conducted fraud analytics in **Snowflake** to evaluate hit rates, trend patterns, loss drivers, and rule-model performance.
- Facilitated **PBI grooming/refinement sessions**, breaking down epics into actionable PBIs and defining clear acceptance criteria.
- Elicited and documented detailed **business and functional requirements** by collaborating with SMEs, stakeholders, and cross-functional teams, resulting in well-defined user stories and clear project deliverables.
- Managed end-to-end **user story lifecycle** in JIRA, including requirement tracking, sprint progress, issue management, and defect triaging.
- Supported **UI/UX design** by developing **wireframes and interaction flows** to visualize application screens, user journeys, and enhancements.
- Performed extensive **data analysis, data profiling, and source-to-target data mapping** to validate business rules and ensure data integrity.
- Reviewed and validated **stored procedures, SQL queries, and ETL logic** across SQL Server, Oracle, and reporting systems to ensure accuracy of analytics and reporting outputs.
- Developed SQL queries to create **views, datasets, and automated reports**, supporting merchandising, marketing, and customer-analytics use cases.
- Assisted QA teams by preparing **test plans, test cases, and test data**, supporting system testing, integration testing, and regression testing.
- Coordinated and facilitated **User Acceptance Testing (UAT)**, including training end users, preparing scenarios, validating outputs, and ensuring production readiness.

Tools & Technologies:

NICE Actimize, FICO Falcon, Feedzai, Snowflake, SQL, Python, Splunk, ACH/NACHA, Zelle, RTP/FedNow, API Integrations

CHARLES SCHWAB CORPORATION, WESTLAKE, TX

JUL 20 – AUG 22

BUSINESS DATA ANALYST

Project 1: Credit Card Fraud Reissue (CCFR)

This application is designed to manage and mitigate potential fraud risk for Visa and MasterCard accounts. It processes account data through a statistical analysis system to assess the likelihood of fraudulent activity. When a high probability of fraud is detected, affected customers are promptly reissued a new credit card, along with a new account number, expiration date, and CVV/CV2 for enhanced security.

Project 2: Digital Trust Verification Platform

This platform facilitates digital trust verification during customer onboarding by incorporating essential features such as the Customer Identification Program (CIP), Customer Due Diligence (CDD), and electronic Know Your Customer (eKYC). It streamlines processes related to digital account opening, accounting, bill payments, P2P transactions, debit card issuance, contactless card payments, wallet provisioning, and core banking operations like ACH and Wire Transfers. The platform serves both B2B and B2C parties, enhancing the security and efficiency of digital financial transactions.

Responsibilities:

- Involved with the **project management, systems analysis and design** of a **web-based application** to track and manage various **case and customer data**.
- Authored **Business Requirement Document (BRD), Functional Requirement Document (FRD), Software Requirement Specifications (SRS), and Functional Specification Documents (FSD)**.
- **Design** using **UML** includes development of **class diagrams, Sequence diagrams, and State diagrams** and implemented these diagrams using **MS Visio**.
- Gathered and documented requirements for **FR Y-14M/Q** schedules, **CCAR datasets**, and **Basel III capital-ratio calculations (CET1, Tier 1, Total Capital)**.
- Performed **data lineage and source-to-target mapping (STTM)** for regulatory-critical data elements across **Snowflake, SAS, and AxiomSL**.
- Supported verification and testing of **Basel III RWA** calculations for **Credit, Market, and Operational Risk**.
- Designed and executed **data-quality validation rules**, reconciliations, and controls for capital and liquidity metrics (**LCR/NSFR**).
- Conducted **UAT cycles** for capital-reporting pipelines and **FR Y-14 submissions**, identifying defects and validating calculations.
- Collaborated with **Risk Modeling, Treasury, Regulatory Reporting, and Data Engineering teams** to harmonize **CCAR datasets** and streamline reporting workflows.
- Prepared **Business Process models** defined present state flows that cover “**AS-IS**” then defined the future state that covers “**TO-BE**” diagram based on the requirements.
- Facilitated **business processes** and **re-engineering (BPR)** efforts and Analyzed **user requirements**, attended **change request meetings** to document changes as per user’s request.
- Used **SQL queries** to extract data from the **database** to perform **data analysis**.
- Created & managed **Business Requirements, Product Backlog** in **HP Quality Center**.
- Regularly interacted with the **Testing team** for executing the **Test Plans**, providing **Test Data**, creating **Test Cases**, and resolving issues upon detection of **bugs** and collecting the **Test Metrics**.
- Assisted the **testing team** with documenting the **system requirements** and testing **system development**. Designed and implemented basic **SQL queries** for **QA testing and report / data validation**, set up definitions and process for **test phases** including **Product, Integration, System, and User Acceptance testing (UAT)**.

PNC BANK, PITTSBURGH, PA

MAY 18 – JUN 20

BUSINESS ANALYST

PNC Bank – Online Banking Platform Enhancement

Enhanced **PNC Bank’s online banking platform** to deliver an improved customer experience for both retail and commercial clients. Implemented new features to support **pending/canceled transaction views, deposit tracking, transfer history, and customer profile management**. Upgraded loan and mortgage modules with **application tracking, payment management, and digital loan statements** to streamline servicing. Strengthening commercial banking capabilities by enabling **real-time loan balance monitoring, payment scheduling, ACH, and wire transfer management**. Delivered a **secure, scalable, and user-friendly solution**, driving greater efficiency and customer satisfaction across personal and business banking operations.

Responsibilities:

- Worked with the **Technical team** and **Product Manager** to understand the functionality.
- Utilized **agile software development methodology** to manage and control **software and product development**.
- Worked with the **Product Manager** and the **Scrum team** on a daily basis for **sprint-related standard activities**.
- Worked in **Agile fashion, sprint planning** (2-3 weeks' sprints), schedule and drive **SCRUMS** to track progress, communicate periodic status to **stakeholders** and **senior management**.
- Facilitating the **daily scrum meetings, sprint planning, sprint review, and sprint retrospective**.
- Managed **bugs** using **Defect Tracking Tool JIRA** and **Confluence**, reviewed each defect and assigned **development team** to resolve problems.
- Designed and implemented basic **SQL queries** for **QA testing and report**.
- Writing **Complex SQL queries**, optimizing **SQL Queries** and performing **Data Analysis** of existing data through **SQL**.
- Create final **UAT test summary** and facilitate approval, create and distribute regular reports on **UAT results, metrics, and status**; Support **UAT execution** and **results tracking** as needed.
- Regularly interacted with the **Testing team** for executing the **Test Plans**, providing **Test Data**, creating **Test Cases**, and resolving issues upon detection of bugs and collecting the **Test Metrics**.

LOWE’S, MOORESVILLE, NC

DEC 17 – MAY 18

BUSINESS ANALYST

Project scope was to build an Omni-channel Digital Wallet called “My Offers” which will be across concept and cross channels i.e. Desktop, Web, mobile APPs and POS. Customers to benefit from an updated shopping experience that provides the ability to manage and redeem offers in a single location based on their preferred behavior. Of significant note, have Big Blue Coupon to be configurable for use both online and in-store, as well as options for it to be visible and shareable from the Digital Wallet. The ultimate vision was to provide the Marketing and Operations Teams with the ability to easily manage and optimize the creation, issuance, redemption and tracking of Omni-channel offers (coupons and savings certificates) and to minimize the use of manual spreadsheets, dependencies on third parties, and custom applications specific to Concepts and / or channels.

Responsibilities:

- **Worked in Agile framework** across the board.

- Created **User Stories** into **Product Backlog Items (PBIs)** and lead **PBI grooming sessions** for **Prioritization** and **Sprint planning**.
- Actively worked with the **Scrum Master & Product Manager** to monitor and prioritize **product backlog** on an ongoing basis to meet **release timelines** and **value to the business**.
- Prepared **project vision**, and **project scope document** along with the **product manager** and other team members.
- Collaborated with **business teams** in setting up the opportunity attributes like **Budget, Timelines, Scope**, and **ROI** etc.
- Worked towards continuous improvement of **Agile** and **scrum practices**.
- Held the **Daily Stand-up Meeting**, documented and updated the **Burn-Down Chart**.
- Expertise in broad range of technologies, including **business process tools** such as **Microsoft Project, MS Excel, MS Access, MS Visio, JIRA, Confluence**, and **Share point**.
- Managed **bugs** using **Defect Tracking Tool JIRA**, reviewed each defect and assigned **development team** to resolve problems.
- Regularly interacted with the **Testing team** for executing the **Test Plans**, providing **Test Data**, creating **Test Cases**, and resolving issues upon detection of bugs and collecting the **Test Metrics**.
- Designed structured **functional testing**, including review of **test scenarios, test cases** and execution/support of **User Acceptance Testing (UAT)**.
