SUMMARY

Clinical Informatics Analyst with 3+ years of experience in Epic workflows, clinical documentation integrity, CDS optimization, quality and regulatory reporting, HEDIS/CMS STAR measures, utilization review support, and RCM process improvement. Strong focus on workflow redesign, charge capture accuracy, data quality validation, interoperability standards, and cross-functional coordination across clinical, HIM, CDI, and quality teams.

EDUCATION

Masters in Health Informatics The University of Findlay, USA	Aug 2023 - May 2025
Bachelor of Pharmacy TRR College of Pharmacy, Jntuh, India	Aug 2018 - Jun 2022

SKILLS

- EHR & Clinical Systems:** Epic, Cerner, Meditech, Redcap
- Clinical Informatics:** Workflow analysis, documentation review, CDS and alert optimization, order set logic, chart audits
- RCM & Coding:** Charge capture, denial analysis, DRG review, CPT, ICD-10, HCPCS, HCC, EOB/835 review
- Quality & Compliance:** NABH, JCI, HEDIS, CMS STAR, PSI, preventive care metrics, readmission indicators
- Data & Reporting:** SQL, Tableau, Power BI, Excel, audit logs, data validation, ETL and data mapping
- Care Management:** Utilization review, medical necessity checks, IP vs OBS review, LOS analysis
- Interoperability:** HL7, FHIR, HIPAA
- Soft Skills:** Communication, coordination, problem solving, RCA, detail orientation

EXPERIENCE

Cleveland Clinic, USA Clinical Informatics Analyst	Jan 2025 - Current
- Improved Epic clinical workflows by reviewing how providers documented encounters, analyzing charting patterns, correcting encounter-to-template mapping, and ensuring workflows aligned with clinical and billing standards. - Reduced alert fatigue by 25% after reviewing medication alerts, BPA triggers, CDS rules, and order panel logic. Adjusted clinical decision support rules to improve relevance and reduce unnecessary interruptions. - Performed more than 200 monthly chart and documentation audits using Epic Audit Logs, Chart Review, and documentation dashboards to support NABH and JCI readiness and strengthen clinical documentation quality. - Analyzed Patient Movement History, ADT events, discharge pathways, and ED-to-inpatient transitions to identify workflow gaps and support a reduction in average LOS. - Worked closely with HIM, CDI, clinical teams, and CDM groups to fix documentation and charge-related issues inside Epic using Charge Router, Charge Review, and modifier checks, preventing more than 100,000 USD in revenue loss.	

- Built SQL, Tableau, and Excel-based dashboards to support clinical operations, quality improvement, throughput monitoring, and documentation compliance.
- Supported quality teams by identifying gaps in HEDIS and CMS STAR measures, preventive care capture, PSI documentation, and readmission-related indicators, helping improve clinical outcome reporting.

Clarus RCM Infotech, India

Jan 2021 – Jul 2023

Clinical Informatics & RCM Analyst

- Reduced payer denial rate by 18% by reviewing EOB and 835 files, identifying clinical documentation gaps, coding mismatches, missing encounter details, and improving documentation accuracy with clinical and coding teams.
- Maintained a 95% clean claim rate by validating CPT, HCPCS, and charge codes against provider notes, encounter information, and clinical care pathways.
- Supported Utilization Management by reviewing inpatient medical records, validating medical necessity, matching level-of-care documentation to clinical criteria, and resolving gaps that affected reimbursement.
- Improved front-end clinical workflows tied to patient intake by strengthening registration accuracy, referral validation, insurance coverage review, and encounter selection, reducing first-pass rejections by 15%.
- Identified recurring documentation, coding, and care-plan issues and escalated them to CDI and Denial teams to support clinical and operational process improvements.
- Created interactive Tableau and Power BI dashboards to track denial trends, coding quality, clinical review outcomes, and provider performance metrics.
- Performed ETL data checks, data mapping, and record validation to maintain high-quality datasets for clinical, financial, and operational reporting.
