

Someshwar Sreeram | Data Analyst

AR, USA | +1 (870) 800-0587 | Someshwarsr87@gmail.com | [LinkedIn](#)

SUMMARY

Data Analyst with **3+ years of experience** in healthcare analytics, claims analytics, population health, HEDIS reporting, Medicare/Medicaid programs, and risk adjustment. Proficient in SQL, Python, Power BI, Tableau, and healthcare reporting, with experience analyzing datasets exceeding 15 million records and transforming complex healthcare data into actionable business insights. Skilled in developing executive dashboards, KPI scorecards, and automated reporting solutions that support quality improvement, operational performance, regulatory compliance, and data-driven decision-making. Experienced collaborating with cross-functional clinical, operational, and business stakeholders to deliver accurate reporting and drive healthcare outcomes.

SKILLS

Healthcare Analytics: Claims Analytics, Clinical Data Analysis, Population Health, HEDIS Reporting, Medicare & Medicaid Analytics, Risk Adjustment, Value-Based Care Analytics, Healthcare KPI Reporting

Data Analysis: SQL, Advanced SQL, Joins, CTEs, Window Functions, Data Validation, Data Cleansing, Data Transformation, Data Quality Management, Trend Analysis, Root Cause Analysis

Business Intelligence: Power BI, Tableau, Dashboard Development, Data Visualization, KPI Reporting, Executive Reporting, Power Query, DAX

Databases & ETL: SQL Server, Oracle, PostgreSQL, Data Warehousing, ETL Processes, Data Extraction, Data Modeling

Healthcare Systems: EHR/EMR, Claims Processing Systems, ICD-10, CPT, HCPCS, HIPAA Compliance, Healthcare Data Governance

Tools: Advanced Excel, Pivot Tables, VLOOKUP, XLOOKUP, Power Query, DAX, Jupyter Notebook, Microsoft Office Suite

Collaboration: Requirements Gathering, Stakeholder Management, Cross-Functional Collaboration, Process Improvement, Agile, Scrum

PROFESSIONAL EXPERIENCE

Elevance Health, USA

Jun 2025 - Present

Healthcare Data Analyst

- Analyzed 15M healthcare claims and membership records using SQL and Python to support Medicare, Medicaid, risk adjustment, and value-based care reporting initiatives.
- Developed 20 Power BI dashboards and KPI scorecards tracking quality measures, utilization patterns, care outcomes, and operational performance for 50 business stakeholders.
- Validated, reconciled, and transformed datasets containing 10M records, improving reporting accuracy and supporting enterprise healthcare data governance standards.
- Generated recurring and ad hoc reports using complex SQL queries, joins, and data transformations across SQL Server and PostgreSQL environments, reducing report preparation time by 30%.
- Partnered with clinical, operational, and business teams to define reporting metrics and deliver insights supporting quality improvement and strategic planning initiatives.
- Supported HEDIS and population health programs by monitoring 30 performance measures, identifying care gaps, and assisting quality reporting activities.
- Maintained reporting documentation, validation procedures, and metric definitions for 30 healthcare reports, supporting audit readiness, HIPAA compliance, and regulatory reporting requirements.

Optum, India

May 2021 - Jul 2023

Healthcare Data Analyst

- Evaluated 8M healthcare claims, eligibility, and clinical records using SQL and Advanced Excel to support Medicare, Medicaid, and population health reporting programs.
- Built Tableau and Power BI dashboards tracking 25 healthcare KPIs, improving visibility into utilization trends, quality measures, and operational performance.
- Performed data extraction, cleansing, validation, and reconciliation across datasets containing 5M records, improving data consistency and reporting reliability.
- Assisted HEDIS reporting initiatives by monitoring 20 quality measures, analyzing performance trends across 500K member records, and supporting annual healthcare quality measurement activities.
- Utilized EHR/EMR and claims data while applying ICD-10, CPT, and HCPCS coding knowledge to support healthcare analytics and reporting requirements.
- Automated recurring reporting processes and ad hoc data requests, reducing manual effort by 25% and improving report delivery timelines.
- Collaborated with 15 cross-functional stakeholders in Agile environments to resolve data issues, validate business requirements, and support operational decision-making across healthcare reporting initiatives.

EDUCATION

Master of Science in Engineering Management

Aug 2023 - May 2025

Arkansas State University, USA

PROJECT

Healthcare Claims & Population Health Analytics Platform

- Architected a healthcare analytics solution using SQL, Python, and Power BI to analyze claims, eligibility, and population health data from multiple healthcare sources.
- Built automated ETL workflows to cleanse, validate, and transform healthcare datasets, improving data quality and reporting consistency.
- Designed interactive dashboards tracking healthcare utilization, care gaps, quality measures, and operational KPIs for business stakeholders.
- Performed trend analysis and risk stratification reporting to support population health management, value-based care, and quality improvement initiatives.

HEDIS Quality Reporting & Risk Adjustment Analytics

- Built a reporting framework using SQL, Python, Tableau, and healthcare claims data to support HEDIS measurement and risk adjustment programs.
- Assessed Medicare and Medicaid member data, identifying performance trends, coding opportunities, and gaps in preventive care measures.
- Engineered KPI dashboards monitoring quality metrics, provider performance, member outcomes, and regulatory reporting requirements.
- Collaborated with clinical and business teams to validate reporting logic, improve measure accuracy, and support healthcare decision-making.
