

Sravya Ragi
Senior Full Stack .NET Developer
Phone: +1(980) 288-5716
Email: sravyaragi2601@gmail.com

PROFESSIONAL SUMMARY:

- Full Stack .NET Developer with 9+ years of experience designing, developing, and delivering enterprise-grade applications across healthcare, banking, government, and automotive domains, following Agile Scrum and Waterfall methodologies.
- Strong expertise in C#, .NET 8, .NET 7, .NET 6, .NET Framework 4.x, ASP.NET Core, ASP.NET MVC, Web API, and Microservices, with hands-on experience in Clean Architecture, Domain-Driven Design (DDD), CQRS, and SOLID principles.
- Experienced in designing and developing RESTful APIs, Minimal APIs, and distributed backend services using MediatR and event-driven patterns to support secure, high-performance system integrations.
- Hands-on experience building applications using Microservices, Clean Architecture, Onion Architecture, N-Tier, and MVC design patterns, following SOLID principles and modular development practices.
- Strong front-end development experience using React, Angular, TypeScript, JavaScript, HTML5, CSS3, and Bootstrap to build responsive Single Page Applications (SPA) and enterprise dashboards.
- Experienced in implementing LLM-based capabilities and RAG workflows using Azure OpenAI Service, with hands-on experience in Prompt Engineering, Embedding Models, and Vector Search for AI-assisted features.
- Strong database experience with SQL Server, Azure SQL, Oracle, T-SQL, stored procedures, indexing, query optimization, and performance tuning across high-volume transactional systems.
- Experienced in data access technologies including Entity Framework Core, ADO.NET, Dapper, and LINQ for efficient and maintainable database interactions.
- Hands-on experience with Microsoft Azure and AWS, using services such as Azure App Services, Azure Functions, Azure Logic Apps, Azure API Management, Azure DevOps, AWS EC2, AWS RDS, AWS S3, and AWS CloudWatch.
- Experienced in implementing application security using OAuth 2.0, OpenID Connect, JWT, Azure Active Directory, RBAC, and OWASP Top 10 practices to meet enterprise compliance standards.
- Hands-on experience with containerization and deployment using Docker, Kubernetes (AKS), and Azure Container Registry to support scalable and consistent cloud deployments.
- Experienced in building event-driven systems using Apache Kafka, RabbitMQ, Azure Service Bus, and message-based communication patterns for asynchronous processing.
- Experienced in CI/CD, testing, and code quality practices using Azure DevOps, Jenkins, Git, xUnit, NUnit, Postman, Swagger, and SonarQube.
- Hands-on experience in production support, root cause analysis, and performance troubleshooting using Azure Application Insights, Log Analytics, and AWS CloudWatch.
- Experienced in mentoring junior developers, conducting code reviews, and promoting clean coding standards and best practices across Agile development teams.

TECHNICAL SKILLS:

Programming Languages	C#, TypeScript, JavaScript, SQL, PL/SQL, Python, PowerShell, Bash, C++, VB.NET, PHP
.NET Technologies	.NET 8, .NET 7, .NET 6, .NET Framework 4.x, ASP.NET Core, ASP.NET MVC, Web API, Minimal APIs, gRPC, Blazor, Razor Pages, WCF, LINQ, Windows Services
Architecture & Patterns	Microservices, Clean Architecture, Onion Architecture, Domain-Driven Design (DDD), CQRS, SOLID Principles, N-Tier, MVC, SOA, Repository Pattern, Event-Driven Architecture
Web & Frontend	React, Angular, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, jQuery, AJAX, JSON, Single Page Applications (SPA)
Databases	SQL Server, Azure SQL, Oracle, PostgreSQL, MySQL, Cosmos DB, MongoDB
ORM & Data Access	Entity Framework Core, Entity Framework, ADO.NET, Dapper, LINQ
Cloud – Azure	App Services, Azure Functions, AKS, API Management, Logic Apps, Service Bus, Event Hub, Container Registry, Azure DevOps, Azure OpenAI
Cloud – AWS	EC2, RDS, S3, Lambda, API Gateway, DynamoDB, CodePipeline, CloudWatch
AI & ML	Azure OpenAI Service, LLMs, RAG, Prompt Engineering, Embedding Models, Vector Search, Semantic Search
Messaging & Integration	Apache Kafka, RabbitMQ, Azure Service Bus, MSMQ, SignalR, WebSockets, SSIS, SSRS, REST, SOAP
Security & Identity	OAuth 2.0, OpenID Connect, JWT, SAML, IdentityServer, Azure Active Directory, RBAC, OWASP Top 10, CORS, CSRF, CSP, SSL/TLS
Infrastructure & IaC	Docker, Kubernetes, Terraform, Helm, ARM Templates, Bicep, Ansible, Azure CLI, AWS CLI
CI/CD & Testing	Azure DevOps, GitHub Actions, Jenkins, Git, GitHub, xUnit, NUnit, Moq, Postman, Swagger, SonarQube
Monitoring	Azure Application Insights, Log Analytics, Prometheus, Grafana, ELK Stack, Splunk, AWS CloudWatch, Dynatrace
Methodologies	Agile Scrum, Waterfall, TDD, BDD, SDLC, JIRA

PROFESSIONAL EXPERIENCE:

- Designed and developed enterprise healthcare supply chain and logistics applications using **C#, ASP.NET Core, Web API, and .NET 8**, supporting medical product distribution, order processing, inventory validation, stock updates, and shipment tracking workflows.
- Developed secure, high-performance **RESTful APIs** and **Minimal APIs** to support order processing, inventory updates, and shipment tracking, with centralized exception handling, request validation, and standardized response patterns.
- Implemented data access layers using **Entity Framework Core** and **LINQ**, ensuring efficient querying, transactional consistency, and maintainable persistence logic across healthcare data workflows.
- Designed and optimized **SQL Server** database schemas including tables, relationships, indexes, and stored procedures to support high-volume transactional workloads and improve query performance.
- Designed and supported **ETL workflows using SSIS**, ingesting and transforming data from external vendor systems and flat files into relational databases to maintain data consistency across systems.
- Designed and developed **React-based Single Page Applications** using **TypeScript, JavaScript, HTML5, and CSS3** to build interactive dashboards for monitoring inventory availability, order status, shipment progress, and supply chain activities.
- Integrated **React** front-end with **ASP.NET Core Web APIs** to provide real-time visibility into stock levels, shipment updates, order activity, and operational exceptions for business users.
- Developed and deployed **Azure Functions** with HTTP and Timer triggers to automate scheduled data processing, inventory synchronization, and shipment updates, and used **Azure Logic Apps** to orchestrate supply chain workflows with external vendor systems.
- Integrated backend services with **Azure API Management** to securely expose and manage microservices, and deployed applications on **Azure App Services** and **AKS** using **Docker** containers and **Azure DevOps CI/CD pipelines**.
- Designed backend services following **Clean Architecture** and **Domain-Driven Design (DDD)** principles, separating services into well-defined bounded contexts for Orders, Inventory, and Shipments to improve maintainability and scalability.
- Implemented **CQRS using MediatR** to separate read and write responsibilities across order and inventory services, improving service maintainability and query performance.
- Implemented enterprise-grade security using **OAuth 2.0, OpenID Connect, JWT, Azure Active Directory, and RBAC** to meet healthcare compliance and data protection standards.
- Implemented event-driven communication using **Apache Kafka** to enable asynchronous and fault-tolerant data processing across microservices for order and inventory events.
- Integrated **LLM-based POC capabilities** using **Azure OpenAI Service** with **ASP.NET Core Web APIs**, applying **Prompt Engineering** and **Embedding Models** to support natural language querying of order, inventory, and shipment data.
- Implemented a **Retrieval-Augmented Generation (RAG)** workflow using **Vector Search** and **Semantic Search** to retrieve relevant supply chain records, enabling accurate AI-generated responses for healthcare operations teams.
- Supported **CI/CD pipelines** using **Azure DevOps, Git, and Jenkins** to enable automated builds and deployments across environments.
- Implemented application monitoring using **Azure Application Insights** and **Log Analytics**, configuring alerts and distributed tracing to support proactive issue detection and faster troubleshooting.
- Performed unit and integration testing using **xUnit, NUnit, and TDD practices** to ensure code quality, application stability, and regression coverage.
- Mentored junior developers through code reviews and pair programming sessions, promoting **SOLID principles** and **OWASP Top 10** security practices across the team.

Environment: C#, .NET 8, ASP.NET Core, Web API, Minimal APIs, Clean Architecture, DDD, CQRS, MediatR, React, TypeScript, Entity Framework Core, SQL Server, T-SQL, SSIS, Apache Kafka, OAuth 2.0, OpenID Connect, JWT, RBAC, Azure OpenAI, RAG, Prompt Engineering, Vector Search, AKS, Docker, Azure Functions, Logic Apps, API Management, Azure DevOps, Git, xUnit, Application Insights, Log Analytics, Agile Scrum

- Designed and developed enterprise banking applications for **Commercial Real Estate financing** using **C#, ASP.NET Core, ASP.NET MVC, and Web API**, supporting the full loan lifecycle including loan setup, disbursement tracking, repayment processing, and financial data management.
- Built secure **RESTful APIs** to support account management, loan processing, transaction validation, and internal banking integrations, ensuring high data accuracy and reliability for financial operations.
- Implemented backend business logic using **C#**, applying object-oriented principles, asynchronous programming, and structured exception handling to ensure system reliability across banking workflows.
- Developed and maintained **WCF services** for internal system integrations, supporting legacy banking workflows alongside modernized ASP.NET Core services.
- Designed and optimized **SQL Server databases** using complex **T-SQL** stored procedures, CTEs, window functions, and performance tuning to ensure transactional accuracy and data integrity for high-volume financial operations.
- Implemented **Entity Framework** data models and mappings to support relational banking data, balancing ORM convenience with raw SQL performance for complex financial queries.

- Supported **data migration and reconciliation** efforts across multiple banking systems, validating transactional data accuracy and ensuring consistency during system transitions.
 - Designed and developed **Angular-based Single Page Applications** using **TypeScript, HTML5, and CSS3**, delivering responsive banking interfaces for loan detail views, transaction history, account balances, and financial reporting dashboards.
 - Integrated **Angular** front-end applications with **ASP.NET Core Web APIs**, ensuring seamless communication between UI and backend banking systems.
 - Orchestrated workflow-based processing using **Azure Logic Apps**, enabling automated orchestration of backend banking services and integration across loan processing systems.
 - Deployed and supported banking applications on **Azure App Services** with **Azure SQL Database** and **Azure API Management**, ensuring scalability, secure API access, and reliable backend service communication.
 - Designed backend services following **Clean Architecture** and **SOLID principles**, organizing loan processing, account management, and transaction modules into independently testable and maintainable layers.
 - Implemented **JWT-based authentication, OAuth 2.0, OpenID Connect, and RBAC** to enforce banking compliance and ensure only authorized users could access sensitive financial data.
 - Applied **OWASP Top 10** security practices across API development, including input validation, **CORS** policy enforcement, and **CSRF** protection to meet banking security and audit requirements.
 - Implemented monitoring and logging using **Azure Application Insights** and **Log Analytics**, enabling performance tracking, anomaly detection, and faster troubleshooting for transaction processing issues.
 - Performed unit and integration testing using **xUnit** and **NUnit** to validate banking business logic, ensure data accuracy, and maintain application stability across releases.
- Ensured applications adhered to **banking compliance, security, and audit standards** throughout development and deployment lifecycles

Environment: C#, .NET 7, .NET 6, ASP.NET Core, ASP.NET MVC, Web API, Clean Architecture, SOLID Principles, Angular, TypeScript, Entity Framework, SQL Server, T-SQL, WCF, OAuth 2.0, OpenID Connect, JWT, RBAC, OWASP Top 10, CORS, Azure App Services, Logic Apps, API Management, Application Insights, Azure DevOps, Git, xUnit, Agile Scrum

Toyota Motor North America – Franklin, TN
.NET Full Stack Developer

Sep 2020 – Aug 2022

- Designed and developed enterprise automotive applications supporting **vehicle lifecycle management, inventory tracking, dealer allocation, and dealership operations** using **C#, ASP.NET Core, ASP.NET MVC, and Web API**.
- Built and maintained secure **RESTful APIs** to support vehicle inventory, order processing, VIN tracking, shipment updates, and dealership system integrations.
- Developed backend services using **C#** and **ASP.NET Core** to handle high-volume vehicle, parts, and inventory data processing with structured exception handling and modular coding practices.
- Designed and optimized **SQL Server** databases including tables, relationships, stored procedures, indexes, views, and query tuning to support high-volume transactional automotive data.
- Used **Entity Framework Core** and **LINQ** for efficient data access, repository-layer implementation, and business logic processing.
- Worked with **Oracle databases** for data retrieval, reporting support, and integration with enterprise automotive systems.
- Designed and developed **Angular-based responsive dashboards** using **TypeScript, JavaScript, HTML5, and CSS3** to track vehicle availability, order status, shipment updates, and dealership inventory activities in real time.
- Built reusable **Angular components**, services, and modules to support dealer-facing workflows, vehicle inventory tracking, and order processing dashboards.
- Enhanced UI performance by optimizing **Angular components**, implementing **lazy loading**, and improving API integration patterns.
- Developed and maintained **WCF services** for internal integrations within a **Service-Oriented Architecture (SOA)** environment.
- Built asynchronous processing workflows using **RabbitMQ** and **MSMQ** to handle vehicle order updates, inventory synchronization, and background processing reliably.
- Integrated applications with third-party vendor APIs for **parts procurement, shipment tracking, and supplier coordination**, ensuring accurate data exchange across the automotive supply chain.
- Designed backend services following **Onion Architecture** principles, enabling clear separation of domain logic, infrastructure concerns, and application services across vehicle, order, and inventory domains.
- Implemented **JWT-based authentication** and **Role-Based Access Control (RBAC)** to secure dealer, customer, vehicle, and inventory data across all application layers.
- Developed reporting solutions using **SSRS** and **SQL Server** to analyze vehicle sales, inventory levels, and order fulfillment metrics for dealership operations teams.
- Deployed and supported automotive applications on **AWS EC2**, integrating with **AWS RDS, S3, API Gateway, and CloudWatch** for scalable hosting, data storage, API management, and operational monitoring.
- Supported automated build and release pipelines using **AWS CodePipeline, Jenkins, and Git**, enabling consistent deployments across development, test, and production environments.
- Troubleshot production issues related to vehicle order processing, inventory synchronization, and API performance, performing root cause analysis and implementing fixes to improve system stability.

Environment: C#, ASP.NET Core, ASP.NET MVC, Web API, Onion Architecture, SOA, Angular, TypeScript, JavaScript, HTML5, CSS3, Entity Framework Core, LINQ, SQL Server, Oracle, T-SQL, Stored Procedures, WCF, RabbitMQ, MSMQ,

JWT, OAuth 2.0, RBAC, AWS EC2, RDS, S3, API Gateway, CloudWatch, CodePipeline, Jenkins, Git, SSRS, Agile Scrum, JIRA

State of South Carolina
.Net Developer

Feb 2019 - Aug 2020

- Designed, developed, and maintained state government web applications using **C#, ASP.NET MVC, ASP.NET Core MVC, and Web API**, supporting internal agency operations and citizen-facing services.
- Developed secure and scalable **RESTful services** to integrate multiple government systems and third-party vendor applications.
- Built backend business logic using **C#**, applying object-oriented design principles, structured exception handling, and validation techniques to ensure application stability.
- Designed and maintained **SQL Server** databases, creating tables, relationships, constraints, and indexes, and wrote optimized **T-SQL queries** to retrieve, update, and validate application data across government workflows.
- Developed data access layers using **ADO.NET** and **Entity Framework**, balancing raw performance with maintainability based on workload requirements.
- Developed responsive and accessible **React-based user interfaces** using **JavaScript, HTML5, CSS3, and Bootstrap** for internal agency users and citizen-facing government portals.
- Integrated **React components** with **ASP.NET Web API** services to support asynchronous data loading, form submissions, search features, and dynamic user interactions.
- Implemented **Role-Based Access Control (RBAC)** and session-based security to restrict access to sensitive government data based on user roles and permissions.
- Modernized selected application modules by transitioning from **ASP.NET MVC to ASP.NET Core MVC**, improving performance, maintainability, and long-term supportability.
- Created operational and audit reports using **SSRS** and **SQL queries**, supporting compliance and oversight requirements for state agency operations.
- Supported application deployments across environments using **Azure DevOps CI/CD pipelines, Azure App Services, IIS, and Windows Server**, following state change-management procedures.

Environment: C#, ASP.NET MVC, ASP.NET Core MVC, Web API, N-Tier Architecture, React, JavaScript, HTML5, CSS3, Bootstrap, ADO.NET, Entity Framework, LINQ, SQL Server, Azure SQL, T-SQL, SSRS, RBAC, Azure App Services, Azure DevOps, CI/CD, IIS, Windows Server, Git, Agile, Waterfall, JIRA, Visual Studio

Innova Solutions - Hyderabad, India
.Net Developer

July 2016 - Oct 2018

- Designed, developed, and maintained enterprise web applications using **C#, .NET Framework 4.x, ASP.NET WebForms, and ASP.NET MVC**, supporting internal business processes and client-facing workflows.
- Implemented **N-Tier Architecture**, separating presentation, business logic, and data access layers to improve modularity and maintainability of enterprise applications.
- Developed backend business logic using **C#**, applying object-oriented programming principles, exception handling, and validation techniques.
- Implemented data access using **ADO.NET**, working with DataSets, DataTables, DataReaders, and parameterized SQL queries to interact with **SQL Server** databases.
- Wrote and optimized **SQL Server** queries to retrieve, insert, update, and validate application data supporting enterprise business workflows.
- Developed **Angular-based UI modules** using **JavaScript, HTML, CSS, and Bootstrap**, supporting interactive workflows with form validations and reusable components.
- Assisted in migrating selected modules from **ASP.NET WebForms to ASP.NET MVC**, improving separation of concerns and application maintainability.
- Deployed enterprise applications on **AWS EC2** with **IIS and Windows Server**, integrating with **AWS RDS** for database support and **AWS S3** for file storage.
- Maintained source code using **SVN and Git**, supporting build and deployment activities through **Jenkins** for controlled application releases.

Environment: C#, C++, .NET Framework 4.x, ASP.NET WebForms, ASP.NET MVC, ADO.NET, SQL Server, N-Tier Architecture, Angular, JavaScript, HTML, CSS, Bootstrap, RBAC, AWS EC2, RDS, S3, Jenkins, IIS, Visual Studio, SVN, Git, Waterfall, Agile, Windows Server
