

Vinay Kishor Badgujar

Chicago, IL | +1 7738282188 | vinaybadgujar22@gmail.com | www.linkedin.com/in/vinay-badgujar-92619a182/

Summary

Cloud and DevOps Engineer with experience supporting Linux and cloud infrastructure, automating deployments and provisioning with GitHub Actions, Terraform, Ansible, Python, and Bash. Skilled in AWS, Azure, Docker, Kubernetes, monitoring, and troubleshooting, with experience building CI/CD pipelines and centralized observability solutions. AWS Solutions Architect and Certified Kubernetes Administrator.

Education

DePaul University

Masters of Science in Cybersecurity (Concentration: Networking & Infrastructure) | GPA 4.0

• **Coursework:** Information Security Management, Network Security (LAN, WAN), Cloud Security, Compliance (NIST / CIS Controls)

Sep 2024 - Jun 2026

Chicago, IL

University of Mumbai

Bachelor of Engineering Information Technology

Aug 2019 - May 2023

Mumbai, India

Skills Summary

- **Cloud & Infrastructure:** AWS, Azure, Linux, PostgreSQL, Docker, Kubernetes, Cloud Computing, Network Troubleshooting, Windows, Google Cloud Platform
- **Observability:** AWS CloudWatch, Datadog, Splunk, Zabbix, Grafana, Dashboards & Alerting, SLO/SLI Tracking
- **Automation & IaC:** Python, Ansible, Terraform, GitHub Actions, Java, Bash/Shell, YAML, CI/CD
- **Networking:** OSI Layer, TCP/IP, BGP, OSPF, VLAN, NAT, L2/L3 Switching, IPv4/IPv6 Subnetting, VPN, DNS, Palo Alto NGFW

Experience

Zoetis Inc | Network Automation Intern

Jun 2025 - Sep 2025

- Automated credential rotation for Palo Alto firewalls and F5 load balancers using Ansible, eliminating manual configuration steps and reducing operational risk from credential drift.
- Collaborated with the network team to build a Python-based firewall route request tool that quickly identified device groups and zones across multiple firewalls, cutting cross-firewall diagnosis time from 30 minutes to 2 minutes.
- Integrated F5 load balancers with DigiCert Trust Lifecycle Manager to automate end-to-end SSL certificate renewal and deployment, reducing certificate-related downtime and ensuring continuous secure traffic.
- Documented cloud and network architectures in Lucidchart and Confluence, improving visibility into infrastructure topologies and supporting collaboration across technical teams.

CitiusCloud Services LLP | Associate Cloud Engineer

Jun 2023 - Jun 2024

- Built a centralized monitoring system using AWS CloudWatch, Zabbix, and Grafana, improving server uptime by 25% and accelerating incident triage through actionable dashboards and alerting.
- Reduced client server provisioning time by 70% by designing and implementing multi-cloud Terraform infrastructure as code solutions across AWS and Google Cloud Platform for application service deployments.
- Automated AWS cloud resource provisioning with AWS Lambda, EventBridge, CloudWatch, and Python using boto3, reducing infrastructure costs by 30% through predictive auto-scaling.
- Designed a scalable, highly available 3-tier network architecture on AWS, implementing VPC peering across production VPCs to ensure secure, low-latency inter-service communication with 99.5% network uptime.
- Provided production support for Windows and Linux servers across compute, network, and storage tiers using Bash scripts and Grafana monitoring; updated runbooks and communicated with stakeholders, cutting mean time to resolution by 20%.
- Partnered with development and operations teams to troubleshoot infrastructure issues, support application deployments, and adopt CI/CD practices, increasing deployment frequency and reducing rollback rates by 15%.

PatilKaki Ecom Ventures | DevOps Intern

Feb 2023 - May 2023

- Built and maintained CI/CD pipelines using GitHub Actions and CodePipeline for microservices, automating 95% of the deployment process across application environments.
- Created firewall rules using AWS WAF, reducing unauthorized network traffic and helping ensure continuous availability for applications and services.
- Optimized AWS cloud resource utilization, leading to a 30% reduction in costs while maintaining application performance.

Projects

HomeLab - Security optimized Cloud-Native Infrastructure

- Deployed microservices on an AWS Elastic Container Service cluster using AWS CodePipeline, CodeBuild, and CodeDeploy to support CI/CD across application environments.
- Developed Terraform-based security automation for the AWS environment, enforcing role-based access control and infrastructure-as-code practices.
- Implemented centralized logging and infrastructure monitoring with Zabbix, then visualized metrics and dashboards in Grafana.

Certifications

- AWS Certified Solutions Architect - Associate
- AWS Certified Cloud Practitioner
- Certified Kubernetes Administrator
