

Professional Summary

Accomplished .NET Software Engineer & Solution Architect with 10 years of experience modernizing legacy systems and delivering secure, cloud-native applications across finance, healthcare, and marketing. Skilled in enterprise architecture, microservices, APIs, and databases, with a strong record of improving scalability, compliance, and business value. Collaborative, adaptable, and quick to master new technologies.

Core Skills

- C# .NET, ASP.NET MVC/Web API, Blazor, React, Angular, LINQ, SOAP, REST, FHIR, gRPC, T-SQL
- Microservices, Event-Driven Design, CQRS, DDD, Clean Architecture, SOLID, API Gateway (YARP)
- Azure, AWS, OpenAI APIs, Azure Cognitive Services, ML.NET, GitHub, Bitbucket
- Azure Data Lake, Synapse, Grafana, OpenTelemetry, AWS CloudWatch, SQL optimization, SSRS, Telerik, Kendo UI
- Azure DevOps (YAML), NuGet, Terraform, Bicep, Docker/Linux, GitHub Actions, Jenkins
- OAuth2/JWT, Entra ID, RBAC, IAM, HIPAA, PCI-DSS, SOX, Audit Logging, EF, EF Core, Dapper
- Agile/Scrum, Mentorship, Stakeholder Alignment

Education

B.S in Computer Science, Georgia State University

2013 – 2017

Professional Experience

Prudential Financial

Newark, NJ

Senior Lead Software Engineer | Solution Architect

Mar 2021 – Sep 2025

Modernized Prudential's onboarding platform with ASP.NET Core/.NET 7 microservices, Angular, Istio, and AI-driven KYC, cutting account setup time from days to minutes while ensuring security and compliance.

- Contributed as part of the **Digital Onboarding & Compliance Engineering team**, responsible for modernizing Prudential's account onboarding and fraud prevention platform used by **3k+ new customers daily**.
- Migrated legacy **ASP.NET WebForms** onboarding and payments workflows to **.NET 7 microservices** with **Angular 14** dashboards, enabling real-time compliance checks and reducing customer account setup time from days to minutes.
- Developed **Kafka** producers and consumers for high-volume financial transaction streams, powering fraud detection pipelines and reducing false positives by 25% through real-time anomaly detection.
- Built **secure APIs (REST/gRPC)** with **OAuth2/JWT** and **Entra ID**, ensuring regulatory compliance and strong identity protection during onboarding.
- Built event-driven workflows with **Azure Functions**, **Service Bus**, **Event Grid**, and **Key Vault** to automate KYC, payments, and compliance, improving reliability and fraud detection.
- Optimized backend services with **EF Core** and **Dapper**, tuning 60+ high-impact **stored procedures** and **queries** cutting execution times by 70%+ and sustaining sub-100 ms lookups for millions of daily transactions.
- Delivered **fraud detection and KYC automation features** by integrating **Python** pipelines with **OpenAI**, **Azure Cognitive Services**, and **ML.NET**, cutting manual document review effort by 70% and reducing false positives by 25%.
- Developed **ETL pipelines** consolidating customer and transaction data from **Microsoft Dynamics 365 CRM**, **payment systems**, and **KYC vendors** into **SQL Server**, **Cosmos DB**, and **Azure Data Lake**, powering unified compliance and reporting.

- Leveraged **Azure Synapse Analytics** to accelerate financial close cycles from 5 days to 2, improving reporting efficiency for finance teams.
- Migrated onboarding workflows into **cloud-native services** using **Docker** containers on **Azure Kubernetes Service (AKS)** with **Istio service mesh**, providing traffic resiliency, policy enforcement, and secure east-west communication.
- Automated infrastructure provisioning with **Terraform**, reducing environment setup times and ensuring consistency across dev/test/stage/prod.
- Enhanced application reliability with **Grafana dashboards, OpenTelemetry tracing, and Istio metrics**, cutting incident response times by 40% and improving uptime.
- Established **CI/CD** pipelines in **Azure DevOps** with automated unit and integration testing (**xUnit, NUnit, Moq, Jest, Jasmine/Karma for Angular 14**), reducing release errors by 40%.
- Published **NuGet libraries** for validation, data access, and logging, increasing developer productivity across teams.
- Mentored 6 engineers through **code reviews, design sessions, and Agile ceremonies**, raising technical maturity and delivery quality within the onboarding engineering team.

ShareCare, Inc
Senior Full Stack Engineer

Atlanta, GA
Apr 2018 – Feb 2021

- Modernized **healthcare** platforms with **SOAP, REST, and FHIR APIs**, ensuring secure and **HIPAA-compliant** data exchange between EHR systems and external providers.
- Migrated legacy **ASP.NET, VB.NET** systems to **AWS ECS microservices**, cutting release cycles from months to weeks and improving patient data and billing workflows.
- Built **React** and **Blazor** dashboards with patient search, history, billing, and secure messaging, streamlining clinician workflows and cutting support tickets by 20%.
- Designed **secure data pipelines** with **C#, AWS Lambda, S3** and **RabbitMQ** to process millions of patient records daily, ensuring reliable **EHR** synchronization and reducing delays in clinical reporting.
- Optimized 50+ **SQL Server stored procedures** and fine-tuned **Entity Framework** queries, reducing average query latency from 820 ms to 190 ms and improving billing and patient lookup performance.
- Migrated **SSRS** reports into **ASP.NET MVC** with **Kendo UI**, empowering clinicians with self-service analytics and reducing dependency on IT for routine reporting requests
- Balanced transactional and non-relational workloads by embedding **AWS RDS** for **SQL Server** and **DynamoDB**, ensuring both billing accuracy and scalable storage of unstructured patient data.
- Introduced observability with **AWS CloudWatch** and **Elasticsearch**, enabling proactive detection of data pipeline failures and reducing incident resolution times by 35%.
- Secured healthcare apps with **IAM** role policies, **KMS encryption**, and **CloudTrail** logging, achieving **HIPAA** audit compliance with minimal remediation.
- Worked closely with clinicians, product owners, and compliance officers in **Agile** sprints to ensure solutions matched healthcare workflows and regulatory needs.

SimplePart LLC
Software Engineer

Atlanta, GA
Aug 2015 – Mar 2018

- Contributed to **ASP.NET MVC marketing** backend modules for dealership sales applications, implementing dashboards and admin tools that improved tracking of agent performance.
- Assisted in building and maintaining **SOAP** and **REST APIs** for CRM and lead integrations, ensuring leads were routed correctly and in real time to dealerships.
- Wrote and debugged **SQL Server queries, triggers, and stored procedures** using **Dapper**, improving reporting accuracy and campaign ROI tracking by up to 50%.
- Helped modernize **Telerik** and **SSRS reports**, reducing reporting turnaround time for automotive campaigns.
- Debugged and maintained a 40K+ line **ASP.NET** and **C++ codebase**, fixing production issues and improving stability for high-volume dealership campaigns.
- Built basic monitoring tools in **.NET** to detect errors and troubleshoot issues during peak traffic, reducing downtime.
- Used **Git** for version control, managing feature branches and resolving merge conflicts during **Agile** sprints.
