PROFILE

Data Engineer with 5+ years of experience in building large-scale data pipelines, ETL processes, and data warehouse solutions. Utilized technologies like **ETL, Python, SQL, Spark, Kubernetes, Databricks, and Kafka** to develop multi-terabyte scalable big data solutions for Banking, Ecommerce and Telecom companies.

TECHNICAL SKILLS

Programming Languages:	Python, SQL, Java, Dot Net, C++, PLSQL
Big Data Technologies:	Spark, PySpark, Spark SQL, Kubernetes, Hadoop, Hive, Kafka, Airflow
AI/ML Technologies :	Tensorflow, Keras model, Auto encoder, Diffusion
Cloud computing:	ADF, Databricks, ADLS, Amazon S3, AWS Glue, AWS EMR
Data Engineering Tools:	Azure DevOps, Data Modelling, ETL/ELT data Pipeline
Orchestration:	CA7, ESP, Control M, Autosys
Familiar:	Rest API, Elastic search, html, CSS, angular9, SOAP

EXPERIENCE

Chicago State University <i>Research Assistant/Programmer</i>	January 2024 - Present Chicago, USA
- I utilized Generative AI technology in the NASA HDTN simulation project, employing supervised machine learning techniques to train the model, achieving an impressive 93% accuracy. - Assisted a professor in text-to-image Generative AI modeling and developed a system to analyze body movement gestures, using few AI algorithms to classify movements as aggressive or non-aggressive. - Processed 10 years of data from cloud sources like AWS S3, Azure SQL/Blob using SSIS ETL tools using .NET language for data handling and successfully loaded the data into the Snowflake cloud database.	
CGI <i>Data Analyst</i>	August 2022 - August 2023 Hyderabad, India
- Build a separate pipeline for API service using Python, loaded into the data mart in Oracle database. - Designed and implemented advanced scheduling capabilities using Informatica and Azure data factory for data pipeline orchestration, reducing manual intervention time by 13% and streamlining workflow efficiency. - Developed a share price forecasting model for the next 5 years using revenue data from AWS cloud, implemented logic for CCAR reporting via stored procedures, and visualized insights using Power BI reporting tools. - Reduced effort by 70% in data validation by using shell scripting automations and cost savings by 10% of projects.	
Infosys <i>Data Engineer</i>	June 2020 - July 2022 Bangalore, India
- Delivered a project to migrate legacy on-premises processes to the cloud using Big Data technologies (Spark), reducing processing time by 20%. - Conducted in-depth data analysis using Hive, Informatica, and Spark SQL, providing SIT/UAT fixes and ensuring smooth operations in the production environment. - Optimized overall process performance through SQL performance tuning, improving job run times by 20% and efficiently managing a 15Terabyte (TB) dataset containing approximately 12 billion records. - Worked on data ingestion pipeline to ingest the flat file in the Data Lake.	
Capgemini <i>ETL Developer</i>	April 2018 - April 2020 Bangalore, India
- Analyzed more than 30,000 customer sales data to find the bottlenecks in the business process. - Consumed source data from AWS Redshift, SAP Hana using ETL and loaded into Elastic search and Salesforce workforce. - Implemented Java code in Informatica component to handle critical requirements.	

EDUCATION

Chicago State University <i>MS in Computer Science (4.0 GPA)</i>	Chicago, IL August 2023 - Dec 2024
