

Nikunj Kumar
Contact No- +17149003296
Email- nikunjdhani66@gmail.com
Visa- GC Holder
Current Location- Cerritos, CA

PROFESSIONAL SUMMARY

- 8+ years IT experience, involving 4 years in Java based applications analysis, 5 years in Android based Mobile Applications, design & development for multiple screen sizes for both Android phones & tablets.
- Experience in Android core concepts like Activities, services, Broadcast receivers, and content providers
- Familiar with the usage of two main classes in RX Java such as observable and subscriber.
- Experience in mobile development in Retail Applications using Native Android SDK.
- Familiar using AIDL in allowing clients to access our service from various applications.
- Hands on experience in using GCM (Google Cloud Messaging) to send data from server to user's devices.
- Experience in Media handling using Video player in Android.
- Good knowledge in Android Architecture, Android Concurrency, Android Middleware and competent with Android Framework API's (Maps, Location, Notifications, Camera).
- Experience in working with public API such as Twitter, Facebook, Google, YouTube.
- Good experience in application development using Android SDK.
- Excellent mobile and web design skills using HTML 5, CSS 3, JavaScript, jQuery and Angular JS.
- Extensive experience in developing data services such as JSON, XML, XHTML, RESTful and SOAP APIs, etc.
- Experience in Automation testing using tools like Espresso, Robotium, Appium.
- Proficient with Atlassian tool (JIRA) to track project progress.
- Familiar with application deploying in Google Play Store, Samsung App Store, Amazon App Store and good knowledge of Version control tools like GIT, GITHUB, and SVN.
- Excellent problem - solving skills and debugging with IDE's like NetBeans, Eclipse and Android Studio.
- Good Knowledge on implementation and testing of material design and UI/UX design.
- Expertise in Java, Android SDK version Android 2.2 to Android 7.0.
- Experience in Android core concepts like Activities, services, Broadcast receivers, and content providers .
- Hands on experience in mobile development in Retail Applications using Native Android SDK.
- Expertise in working with scrum masters that impact velocity.
- Experience in using various development environments like Eclipse and My Eclipse.
- Proficient in gathering requirement analysis, functional analysis, conceptual and logical thinking.
- Experience working with Google Maps APIs, In-App Purchases, In-App advertising, Geocoder API, Ticketmaster, Geo locations, PayPal, Google Analytics.
- Expertise in modifying and using source code version with tools like SVN, GIT and CVS.
- Experience in using services like Messaging, Bluetooth and Wi-Fi, Optimum Wi-Fi.
- Firm understanding and experience of interfacing to web services using XML/JSON, GSON, REST, OAuth 2.0 and parsing their contents.
- Experience with query languages including SQL Server, MySQL, and SQLite3.
- Good knowledge in designing and developing adaptive UI components, different Custom Views and Widgets for Android phones with different screen resolutions.
- Experience in integrating Mobile applications with Web based applications via web Services.
- Hands on experience in using data persistence both on-device and in the cloud.
- Experience in requirements gathering and Full Cycle Development Planning & Implementation.
- Expertise in all aspects of Android version phones application development including designing for all types of screen sizes and orientations.

TECHNICAL SKILLS:

Languages: C, C++, Java 8, Python, kotlin, GO, Elixir.

Operating Systems: Windows (10/8.1), Ubuntu, Mac, Linux

IDE: Android Studio, Eclipse, IntelliJ

Version controls: SVN, GitHub, CVS, SVN, ClearCase, XCode 3.0, Bitbucket.

Web Servers/Services: JBoss, WebLogic, WebSphere, Tomcat, Jetty, JProfiler, Apache, SOAP, REST, WSDL, UDDI, SpringBoot Microservices

Frameworks: Retrofit, Espresso, Glide, Picasso, Dagger, OKHttp, OAuth, Google, ionic junit, mocha, EventBus.

Build Automation Software: ANT, Maven, Jenkins, Shell Scripts, Batch Scripts, Robotium, Testing, Code Quality and Bug Tracking Tools JUnit, Mockito, JIRA.
XML Technologies: DOM, SAX, JAXP, JAXB, XML-RPC and XML Beans.

Career Background

Client- Anthem, Cerritos, CA
Sr. Android Developer
Jan 2023 to Present

Responsibilities:

- Developed Single Page Applications (SPA) i.e. web applications using Angular js, Backbone.js, node.js, handlebars and mustache.js
- Involved in detecting the device rotation by implementing the Accelerometer using the Sensor Event Listeners.
- Integrated audio, video, and images into application using Android Multimedia framework.
- For authenticating and interacting with APIs and sending network requests with OkHttp used Retrofit which provides a powerful framework.
- Involved in Web design and development, application development using Photoshop, Dreamweaver, HTML, JavaScript, and Angular JS.
- Implemented Kotlin with Android content providers for implementing features like sending E-mails, SMS, etc., from the app and designed suitable GUI for these applications.
- Incorporated and used languages such as Kotlin and Java in the development processes.
- Responsible in designing and developing the user interaction screens using XML, Java, Kotlin, gradle components and deploying the applications to play store
- Involved in discussions with the clients regarding constraints and examined them.
- Debugged the code using TDD and eliminated the occurrence of expectations.
- Designed dynamic and multi-browser compatible pages using HTML, CSS, JQuery, Angular js and JavaScript.
- Worked on getting the data from the Contact on the device using content providers. Design screens for an application with Native Android Studio IDE using MVC pattern.
- Developed alerts such as breaking news, severe weather by implementing Toast, Dialog notifications.
- Developed a robust Native Android mobile application for utilizing and managing secure API.
- Dagger 2 analyzes these dependencies for you and generates code to help wire them together.
- Implemented activities, linear, frame, relative layouts, and fragments. Displayed information by designing custom List Views.
- Customized look and feel of an application by editing images and altering photos using Illustrator CS5 and Photoshop CS5.
- Detected the location of the user using Network provider and GPS to find the nearby ATM and using Google Play Services.
- Developed the SQLite database to store the articles offline as per user requirements. Used shared preferences to store data. Exchanged and stored data using JSON.
- Responsible for bug fixes and peer reviews. Performed debugging and testing of code on various Android devices. Developed apps using Eclipse IDE and Android SDK.
- Expanding support to regular updates and UI development based on user feedback and reviews.
- Handled long time processes by implementing multithreading. Displayed HTML pages using web view.
- Involved in developing conventional view for cropping the scanned image before processing for both landscape and portrait modes.
- Maintained Google design guidelines and Android best practices to update an application regularly.
- Incorporated the Barcode Scanner library to scan the payment cards of customers. Developed the Barcode Scanner library to give the better-scanned results.
- Incorporated SQLite Database framework for an easier Database transaction.
- Used XML to develop GUI. To optimize the efficiency, implemented and evaluated new technologies. Displayed background progress by implementing Animated Progress Dialog.
- Performed debugging and testing to an application on various Android devices using Logcat and DDMS.
- Worked as a Team Lead for a group of 7 members while developing a Native mobile application.
- Used Angular JS and Node JS to implement rich functionality in various pages: form validation, CRUD, grid, search, sort, pagination, multi-selection, tags-input, advanced directives, authentication, server-side proxy, unit tests, cloud integration, slide pages, users switch etc.
- Performed streaming of media files such as videos and presented them for playback in the application.
- Used one of the most key component of media framework Media player.
- Used Media Controller object to let the user control playback.
- Used JUNIT to develop test cases by interacting with the testing team. To optimize scalability designed components using OOP.
- Worked on a team with other departments within App development. Testing and debugging on different devices of Android. Used GIT to maintain source code of an application.
- Used JSON to communicate between server and application. Managed the information transferred across the network by using app security. Processed Credit Card Payments for mail orders by Integrating the Payment Gateway in the app.
- Used Navigation Drawer, List View, and View Pager to develop an UI for most of the application modules.

Environment: Java, Kotlin, Android SDK, Android Version 2.3. 4.4 Android Studio, JSON, MVC, XML, and Google Maps API.

Client- Yami IT Solutions, Gujrat
Android Developer
May 2017 to Nov 2022

Responsibilities:

- Developed front end pages in a professional manner using HTML, CSS, JavaScript, Node.js and JQUERY.
- Involved in the implementation of client side and server side programming using HTML and JavaScript.
- Developed advanced Java Script modules such as capture visitor information, browser version, button animation, and timing object. Extensively used JSTL tag libraries.
- Developed and Implemented CSS themes for Project and worked on front end technologies HTML5, CSS3, Ember, Bootstrap and Java Script.
- Designed cross-browser companionable and compliant CSS-based page layouts.
- Involved in fixing Front-End issues with the layouts. Created templates with dynamic data from XML file using XML.
- Converted HTML/CSS non-functional pages into dynamic JSP pages by working with backend developers.
- Designed UI with JavaScript, HTML5, AJAX, CSS, and JQuery to develop new screens for an application.
- Developed client-side validation using JQUERY and JavaScript.
- Improved User Interface interaction by using Angular.js extensively. Experience in using SOAP UI for performing testing.
- As per the addition of new features modified an existing database, written SQL queries, and stored procedures.
- Used in-house custom tag libraries, Struts framework and Standard tag libraries for the presentation layer.
- Developed client-side JavaScript framework using Angular and Knockout.
- Used CSS, HTML, DHTML and JavaScript to develop web pages. Performed application debugging.
- Designed pages with Search Engine Optimization (SEO) techniques.
- Integrated Kotlin Koin dependency injection to describe dependencies into modules and sub-modules, provide a factory bean definition and resolve a component dependency.
- Maintained comprehensive knowledge of the mobile development cycle and addressed challenges arising in each phase.
- Managed aspects of Android app lifecycle from research and planning through deployment and post-launch support.
- Tested applications prior to final review to verify issue resolution.
- Provided dedicated support and timely issue resolution to clients following successful app launch.
- Successfully integrated one signal push notifications into apps, bolstering user engagement.
- Familiar with Firebase integration in building of apps, release and monitor app performance and understand and improve user engagement.
- Working with parsing Json using Retrofit, Loopj and Volley and several other third party libraries or dependencies which are used for accomplishing tasks.
- Integrated App monetization platform like Admob, Facebook Audience Network.
- Check and identify the bugs and faults in applications and to solve them.
- Familiar with version control systems like Git and Github to manage and deploy code with several developers synchronously.
- Integrated Services, Receivers and Widgets and Android Permission related tasks.
- Worked with SQLite and Room Database for data caching.
- Worked on designing user interfaces for a web-based internal system.
- Used JQUERY to perform AJAX calls for creating collaborative web pages on JSON response.
- Used third-party libraries, custom libraries and APIs to develop new applications. • Created custom mobile applications using native technologies.
- Worked in Android Studio with coding in Kotlin using an MVVM Android app architecture.

Environment: JIRA, Android Studio, Kotlin, Android OS 4.0, Linux OS and above, BitBucket, Github.

Client- Quest Software, Hyderabad
Android Developer
Feb 2015 to April 2017

Responsibilities:

- Involved in all phases of Software Development Life Cycle (SDLC) like Analysis, Design, Development, Implementation and Testing of the project.
- Participated in all the business to gather and analyze the requirement and created a high-level documentation for the release plan and shared to business.
- Involved in team level meetings and analyzed the code for requirements and developed team level documentation with the tasks and estimations.
- Designed modules with MVVM architectural pattern and developed using Kotlin programming language.
- Implemented Composable UI to design UI screens to minimal the use of xml.
- Involved in Zulu enhancement project to migrate and enhance the existing features from legacy Java code to Kotlin using Jetpack components.
- Used RxJava as a library for composing asynchronous and event-based programs by using observable sequences and used Retrofit to consume and parse JSON from Restful APIs.

- Integrated external modules in the project to consume common UI attributes across app.
- Redesigned the code to implement networks calls to consume Zulu cloud endpoints and parse the data.
- Implemented global toggles for Android and iOS platform to navigate across legacy flow or zulu flow based on toggle. U
- Used frameworks like Mockito for client-side validation and Robolectric for business logic testing
- Created various custom views for the application using standard Android components, composable, and various UI widgets types.
- Used Jetpack components such as Dagger for dependency injection, Data Binding, Live Data and Coroutines for background tasks.

Environment: Kotlin, Java, Coroutines, Composable UI, Rx Java, Retrofit, MVVM, Rest API, JSON, GSON,

Client- Byteridge, Telangana
Software Developer
Feb 2014 to Jan 2015

Responsibilities:

- Involved in implementing design patterns such as Data Access Objects, Data Transfer objects, MVC, and Singleton.
- Used SVN as a version control system and transferred the application data between client and server using XML.
- Used MVC (Spring) to implement MVC controllers and to deploy execution flow in the servlet Environment.
- Performed code reviews and provided technical guidance to other team members. Resolved customer related issues and assisted in quality assurance.
- Worked with the Subject matter experts and business analysts to communicate effectively, to propose new solutions, and to identify the gaps in the requirements.
- Performed testing using JUNIT, programming using Hibernate, actively participated in Maven setup and Spring IOC configuration.
- Communicated with other dependent systems by implementing SOAP/RESTFUL web services.
- To receive updates and to track the different tasks about the project worked with an offshore team and attended their meetings daily.

Environment- JSP, Core Java, Servlets, kotlin, Struts, AJAX, SQL, JUNIT, JavaScript, Eclipse, JIRA, HTML, CSS.

EDUCATION BACKGROUND

B.E. in Electronics from Nagpur University, 2013
