

George Ndegwah

DevOps Support Engineer

E-Mail: kamaugeorge55@live.com | Contact No.: 832-916-7153

PROFESSIONAL SUMMARY

Experienced DevOps Support Engineer with 5+ years in production support. I have a comprehensive understanding & proficiency in CI/CD pipeline Administration, Technical Support, Application Maintenance, technical procedure documentation, and customer support administration. I am a committed team player, adaptable, and excited to learn new technologies.

KEY EXPERTISE

CI/CD pipeline Administration	Continual service improvement	Team building
Technical Support	Software Support & Installation	Zena Workstation, Putty, Gitbash
System & Server Administration	MySQL, Python, SQL	Documentation
Unix commands	Disaster Recovery	Nexus, SonarQube
IBM-UrbanCode Deploy, Jenkins, Github	Jira, Q-test	Service Now ticketing system

EDUCATION & CERTIFICATION

- B.S. in Computer Science – **Southern New Hampshire University (Honors)**
- Associate of Art in Computer Science - **Montgomery College (Honors)**
- UrbanCode Deploy (UCD) – **Udemy**
- Qtest, Jira - **Udemy**

EMPLOYMENT

2020 – Present: cognizant technology solutions | DevOps Support Engineer

Project: HCSC – ARES IT-Core Services Client: HCSC, Chicago

Work location: Richardson, Texas

Project Summary:

Assisted developers in migrating and auto deploying the Health Care Service Corporation (HCSC) applications into development/test/production environments. The deployment used a series of CI/CD tools and multiple platforms, such as IBM WebSphere middleware (WAS), Pivotal Cloud Foundry (PCF), Talend, UiPath, and MuleSoft Anypoint. The tools used are IBM - UrbanCode Deploy (UCD), Jira, GitHub, Jenkins, Nexus, SonarQube, Q-test, MyEclipse, IntelliJ, and Visual Studio code.

Roles and Responsibilities:

- Ensured UCD application availability and addressed performance issues.
- Mapped applications to resources in UCD.
- Configured UCD components in different environments.
- Debugged and fix deployment failures to different platforms.
- Managed access to applications and addressed UCD pipeline-related issues.
- Ensured Jenkins availability and performed pipeline configuration.
- Debugged and fixed Jenkins build configuration issues.
- Configured Jira workflows, managed user permissions and maintained overall system efficiency.
- Addressed Jira performance issues.
- Assisted users with Jira issues configurations.
- Performed Jira post-upgrade checkout.
- Provided GitHub access to Repositories, branches, and protected branches.

- Debugged and fixed GitHub commit and integration issues.
- Performed manual upload of artifacts to Nexus.
- Debugged and fixed Q-Test requirements/test plan/test design/ test execution issues.
- Assisted users in installing and configuring MyEclipse, IntelliJ, and Visual Studio code software.
- Prepared business and technical maintenance documents.

2019 – 2020: cognizant technology solutions | System Analyst / Big Data Analyst

Project: HCSC – AMS Data & Analytics Solutions Client: HCSC, Chicago

Work location: Richardson, Texas

Project Summary:

I worked on batch jobs running on the Zena client scheduler, which migrated Health Care Service Corporation (HCSC) products, plans, and data from vendors and sources into Datalake in Hadoop. Zena client also supplied data to different downstream systems or entities as Extracts. The tools used are Teradata, Pig, Hive, HBase, Sqoop, Zena client, Shell Script, Spark, and IBM Infosphere (Data Replication Console).

Roles and Responsibilities:

- Analyzed data quality issues in the data ingestion and consumption layer.
- Worked on batch jobs importing and exporting data from various databases (Teradata, Oracle, DB2) into HDFS using Sqoop.
- Loaded data from various data sources to Hadoop production and Hive by designing and developing programs to run on Hadoop Clusters using Spark, HQL, Scala, Kafka, and Python to build and improve the business reporting layer in the enterprise data lake.
- Troubleshooted Datalake performance issues using Shell, Hive, Scala, and Python and support technical challenges during development, testing, and production.
- Debugged shell, MapReduce, Python, and PIG scripts to troubleshoot failures in production.
- Prepared business and technical maintenance documents for applications.
- Automated manual processes and reports using UNIX shell, HQL, and Zena
- Excelled in Zena client for scheduling/monitoring/abend resolution.
- Handled subscriptions using IBM infosphere Data Replication (IIDR) to load data to Hadoop production and Hive from different sources (DB2/Oracle)
- Managed applications by suppressing alerts, which reduced incident counts during upgrades.
- Knowledge in Agile/Scrum software development environment.
- Maintained reports, fix data, visualization, analytical issues/defects, and add new features.
- Mentored other team members on any ongoing issues, provide technical support, and ensure no impact on the project and incident deadlines.

2018 – 2019: Platform by Per Scholas (Cognizant) | Big Data Programmer Analyst

Project: AMS/AVM support

Work location: Irving, TX

- Selected to participate in a full-time, 12-week intensive training program sponsored by Cognizant as a pipeline into a career in Big Data and Application Value Management
- Trained on how to evaluate, improve, and manage internal ITIL framework utilizing big data tools without disrupting a company's current operations
- Completed a case study that utilized several tools and processes. It involved using JDBC to connect to Databases and manipulate queries, Data Extraction and Transportation with Sqoop, Data Loading with Hive, Process Automation and Optimization with Oozie, Filtering with Spark, and Data Visualization with Hive.
- The training curriculum included Agile, ITIL, MySQL, Java, JDBC, Unix/Linux, Big Data, Data Warehousing, Hadoop, Hive, Oozie, and Spark.

OTHER SKILLS & ABILITIES

- Highly organized with excellent time management skills.
- Ability to work under minimal supervision
- A committed team player, able to motivate and inspire others and work in a cohesive team
