G.Dramgotchian@gmail.com | (215) 605-5059

SUMMARY

Motivated computer scientist, currently working as a Patent Examiner, specializing in machine learning and artificial intelligence technologies. Skilled in analyzing complex technical concepts, conducting in-depth research, and solving problems with precision. Passionate about transitioning into the field of data science to apply analytical and programming expertise in new ways. Actively pursuing opportunities to grow in this field and planning to further my knowledge through a master's degree in data science.

EDUCATION

Eastern University

Expected Completion: 2026

Data Science, Masters of Science

Temple University

Graduated: December 2023

Computer Science, Bachelor of Science

SKILLS

Microsoft Office, GitHub, HW Testing, Reliability Testing, Failure Analysis, Troubleshooting, Project Management, Operation System Testing, Virus and Malware Mitigation, OS Testing, Software Development, UX/UI Design, MySQL, PostgreSQL, Software Installation

EXPERIENCE

USPTO, Media, PA (Remote)

April 2024 - Present

Patent Examiner – Machine Learning/Artificial Intelligence

- Performed thorough examination of patent applications related to machine learning and artificial intelligence technologies to grant or reject patent rights to applicants based on United States patent law
- Conducted in-depth prior art searches to assess novelty and non-obviousness of submitted patent applications with the use of internal database tools
- Provided clear and concise written decisions and office actions, detailing grounds for patentability or rejection
- Collaborated with inventors, attorneys and stakeholders to clarify technical terms and redefine scope of claims
- Utilized internal examination tools and databases for case management and analysis

Apple Inc., Willow Grove, PA

September 2017 – April 2024

Data Science – Apple Maps

November 2023 – April 2024

- Selected to participate in a competitive corporate career experience with Apples Maps Team
- Executed SQL queries to retrieve and analyze data within specified date ranges, comparing results against expected values to identify discrepancies and ensure data accuracy
- Performed QA testing on pre-release iterations of Apple Maps to discover and identify bugs in software
- Gathered and analyzed app analytic data over extended periods to identify common trends and discrepancies between actual performance and expected outcomes with the use of terminal commands

GEVORK DRAMGOTCHIAN

Mac Hardware Technician

May 2021 – April 2024

- Conducted failure and root cause analysis to assess user customer impact on Apple devices and communicate hardware mitigation and testing to hardware engineers
- High level of focus on peer relationships, team building, mentorship, and development
- Developed strategies to help increase productivity and results of teammates
- Proficient in use of software systems to manage queues of repairs, appointments, and performance metrics
- Certified in repairing hardware and software on all Apple products including Mac and Mac OS, providing service to hundreds of devices weekly

Hardware Reliability Engineer

July 2019 – November 2019, February 2022 – July 2022

- Selected to participate in two, six-month, competitive corporate career experiences with Apples Hardware Systems Reliability Team
- Provided imaginative, practical, and comprehensive support for next-generation products, as well as performed on-going testing of current shipping products
- Supported the research of Reliability Engineers by conducting experiments that include set up of test equipment, assembling test fixtures, data collection, and analysis reporting
- Tests included controlled drop, random drop, thermal cycling, tumble, high heat, and humidity
- Worked on testing which resulted in the direct creation of a worldwide quality program to address a manufacturing defect in certain models of Apple Watch

Technical Expert

March 2018 – May 2021

Technical Specialist

September 2017 - March 2018
