SUMMARY

Experienced Data Engineer and Analyst with 5 years of expertise in designing, developing, and optimizing data pipelines, big data solutions, and analytics models across diverse domains, including healthcare, finance, supply chain, and consumer goods. Skilled in leveraging cloud platforms (AWS, Azure, GCP), big data technologies (Hadoop, Spark, Kafka, Databricks), and ETL tools (Informatica, Airflow, Glue) to manage and analyze complex data ecosystems. Proficient in Python, SQL, Tableau, Power BI, and other analytical tools, with a strong focus on delivering actionable insights, building scalable solutions, and ensuring data accuracy, compliance, and privacy (e.g., HIPAA, financial regulations). Adept at integrating business acumen with technical expertise to solve data challenges, drive operational efficiencies, and support data-driven decision-making to achieve strategic goals.

SKILLS

Core Skills: Advanced Analytics, API Integration, Asset Management, Business Analytics, Compliance, Customer Churn, Data Accuracy, Data Analysis, Data Engineering, Data Integration, Data Privacy, Data Quality Framework, Data Visualization, Designing Data Pipelines, Donor Management, ETL Processes, Healthcare Data, HIPAA Regulations, Machine Learning, Optimizing Data Pipelines, Performance Optimization, Predictive Modeling, Real-Time Decision-Making, Supply Chain Management

Programming Languages: Python, Java, JavaScript, SQL, R, SAS (Flask, Django, REST APIs)

Cloud Platforms: AWS (Redshift, S3, Glue), Azure, Google Cloud Platform (GCP)

Big Data Tools: Hadoop, Spark, Databricks, Kafka, Apache Airflow

ETL & BI Tools: Informatica IICS, Azure Data Factory, AWS Glue, Data Pipelines, Tableau, Power BI

Databases: MySQL, PostgreSQL, MongoDB

DevOps & Infrastructure: Docker, Kubernetes, Terraform, Jenkins

Other Tools: Git, GitHub, Jupyter Notebook, Excel (Pivot Tables), Process Automation, Microsoft Word, Microsoft Access, Microsoft Stack, Looker, PowerPoint, VBA, Crystal Reports

EXPERIENCE

Carter BloodCare, USA | Data Analyst

Jan 2024 - Present

- Developed and deployed an asset management system using Power BI and SQL, optimizing operational workflows and achieving a 20% improvement in efficiency through enhanced resource tracking, inventory management, and cross-team data visibility.
- Conducted in-depth analysis of donor and patient data using advanced SQL queries and Power BI, delivering actionable insights that improved supply chain and donor management strategies.
- Automated reporting dashboards for compliance, donor statistics, and performance metrics, reducing manual reporting efforts by 40% and enabling timely, data-driven decision-making.
- Spearheaded the creation of real-time data visualizations in Power BI, allowing better stock level tracking and faster delivery of critical blood inventory, minimizing shortages and enhancing supply chain responsiveness.
- Collaborated with IT and cross-functional teams to integrate healthcare datasets into AWS cloud platforms (e.g., AWS S3), supporting real-time analytics and predictive forecasting for blood collection and distribution.
- Implemented a data-driven approach to identify trends, anomalies, and opportunities for operational improvement within donor and inventory systems.
- Contributed to developing a cloud-based data architecture compliant with HIPAA standards, ensuring secure, scalable healthcare data management and enabling real-time reporting and analytics.

Cognizant Technology Solutions | Big Data Engineer

Jun 2019 - Dec 2021

- Spearheaded the migration of healthcare datasets from Hadoop to AWS cloud, optimizing storage and retrieval using AWS S3 for secure, scalable storage and AWS Redshift for high-performance data warehousing and analytics.
- Led distributed data processing initiatives using PySpark and Scala, leveraging Spark's MapReduce to efficiently process large datasets and improve system-wide data transformation and flow.
- Achieved a 35% improvement in data processing efficiency and a 40% reduction in query latency by implementing optimized PySpark and SQL solutions within AWS Redshift, boosting reporting system performance.
- Managed the transfer of massive datasets from Hadoop's HDFS to AWS S3, ensuring secure migration and streamlined cloud workflows, while maintaining compliance and performance standards.
- Designed and developed scalable ETL pipelines to automate extraction, transformation, and loading of healthcare data, reducing manual effort by 30% and enhancing multi-system integration.
- Employed Apache Spark for real-time and batch analytics, reducing latency and improving application responsiveness to deliver faster insights for healthcare decision-making.
- Ensured HIPAA compliance throughout migration, verifying data integrity and security while sustaining high performance across the AWS ecosystem.
- Provided training and ongoing support to team members to facilitate adoption of new tools and processes, improving department-wide usability and long-term efficiency.

- Utilized MS Office tools (SharePoint, OneDrive, Outlook) to manage projects, collaborate across teams, and effectively share insights.
- Compiled and presented detailed reports using Excel, PowerPoint, and OneNote, improving communication and supporting strategic decisions across the organization.

Philips Healthcare | Data Analyst

May 2018 – Jun 2019

- Designed and implemented middle-tier APIs to integrate backend healthcare databases with front-end applications, enhancing the flow of patient and operational data for more effective healthcare decision-making.
- Optimized analytics systems by identifying and resolving performance bottlenecks, resulting in a 25% improvement in data processing speeds and more efficient healthcare data analysis.
- Conducted in-depth analysis and visualizations of large healthcare datasets using Python and Tableau, delivering actionable insights that influenced patient care strategies, supply chain management, and resource allocation.
- Supported and automated ETL operations using Informatica and SQL, ensuring high data integrity and consistency across systems—key to maintaining HIPAA compliance and accurate healthcare reporting.
- Created thorough documentation for analytics processes, promoting better team collaboration, knowledge sharing, and adherence to best practices in healthcare data management.

EDUCATION

Masters in Business Analytics

Jan 2022 - Dec 2023

University of Texas • Dallas, TX

Bachelor of Technology in Electronics and Communication Engineering

Aug2017 – Jul 2021

SRM Institute of Science and Technology

PROJECTS

Data-Driven Strategies for Table Spreads – Conagra Brands

- Spearheaded predictive analysis initiatives to optimize brand portfolio performance and profitability, leveraging PySpark, SQL, and AWS Redshift to efficiently manage and analyze large datasets.
- Streamlined data processing workflows by 25% and reduced report generation time by 30% through advanced data engineering techniques, enabling faster insights and more agile decision-making.
- Collaborated with cross-functional teams to generate comprehensive insights into consumer trends, supporting data-driven marketing strategies and operational improvements.

Applied Machine Learning Project on Airfares

- Developed and deployed advanced cost forecasting models for the air travel industry, achieving a 20% improvement in prediction accuracy through machine learning algorithms.
- Utilized AWS SageMaker to enable scalable and efficient model training, reducing training time by 40% and ensuring robust handling of large-scale datasets.
- Conducted exploratory data analysis and feature engineering to uncover critical pricing patterns, significantly enhancing the predictive performance of the models.
