

Jobin Abraham John

Cloud Engineer

(656) 214 9700 || jobinjohn144@gmail.com || [LinkedIn](#) || [GitHub](#) || [Portfolio](#) || Tampa, FL 33612

SUMMARY

Highly skilled and Multi-Cloud Certified Engineer with 3 years of experience designing highly available, fault-tolerant, and secure cloud infrastructure utilizing Azure/AWS. Expertise in Azure Cloud Migration, Linux/Windows Administration, CI/CD Integration working in agile environment. Proven leadership in cross-functional teams driving successful cloud implementations and enhancing DevOps processes. Strong problem-solving skills with a focus on automation and efficiency.

EDUCATION

- Master of Science in Business Analytics & Information Systems** Expected Graduation May 2025
University of South Florida, Tampa, FL GPA: 3.83
- Bachelor of Engineering, Computer Engineering** June 2016 – July 2020
St. Vincent Pallotti College of Engineering, Maharashtra, India

TECHNICAL SKILLSET

- CI Tools:** Azure DevOps, Jenkins
- Scripting:** Bash, Python, YAML
- Cloud Platform:** Azure, AWS
- Version Control:** Git, GitHub, Azure Repos
- Certifications:** Microsoft Azure Administrator Associate (AZ-104), Microsoft Azure Fundamentals (AZ-900), AWS Solutions Architect–Associate, Terraform Associate
- Container Technology:** Kubernetes, Docker
- IaC:** Terraform, Ansible, Azure CLI
- Database:** PostgreSQL, MySQL, SQL Server
- Monitoring:** Prometheus, Grafana, Azure Monitor

PROFESSIONAL EXPERIENCE

Orlando Utilities Commission Orlando, FL May 2024 – August 2024
Data Analyst Intern

- Performed **data migration** from 3 different platforms (Salesforce, Verint and Openscape) into **Qlik Sense** database to create a Dashboard to analyze customer service agent performance.
- Achieved a **30%** increase in performance tracking accuracy and reduced report generation time by **40%**, enabling management to access real-time agent metrics more efficiently and make data-driven decisions faster.

Capgemini Technology Services India Limited January 2021 – June 2023
Senior Cloud Engineer

- Spearheaded the migration of **150+ servers** from on-premises to the **Azure** cloud platform as a Technical Lead, managing servers of 4 subsidiary companies.
- Implemented a scalable **CI/CD pipeline** utilizing **Terraform** to automate cloud infrastructure provisioning and continuous deployments, resulting in a **40% decrease** in execution time and enhanced development efficiency.
- Developed Dockerfiles and built Docker images** as per client requirements to containerize their applications, enabling seamless deployment and consistent performance across diverse environments.
- Conducted **SUSE Linux Server Upgrade from 12 SP to 15 SP 4** for servers hosted in AWS, including the upgrade of SUSE Linux Cluster servers. Performed Fall over and Fall back of cluster servers while upgrade.
- Designed and maintained **Azure Virtual Networks (VNETs), subnets, public IPs, Network Security Groups (NSGs), and route tables** to establish secure and scalable network architectures. Leveraged **Azure Monitor** and **Log Analytics** to track network activity, identify anomalies, and enhance overall security and efficiency by 55%.

PROJECTS

Automated YouTube Clone Deployment Using DevOps CI/CD Pipeline [GitHub](#)

- Deployed a YouTube clone website on **Azure App Services**, harnessing its advanced capabilities for seamless **scalability** and **high availability** to deliver an exceptional user experience.
- Engineered a comprehensive **CI/CD pipeline** using **Azure DevOps** to automate build and release processes, significantly accelerating rollout cycles and ensuring consistent, reliable updates.

CI/CD Pipeline for Azure VM Deployment Using Terraform in Azure DevOps [GitHub](#)

- Automated the provisioning of **virtual machines (VMs)** in Azure by implementing a **CI/CD pipeline** with **Azure DevOps** and **Terraform**, utilizing **Infrastructure as Code (IaC)** to ensure consistent and repeatable deployments.
- Designed and developed a comprehensive Terraform configuration that defined VM specifications, network settings, and associated resources, enhancing provisioning efficiency and reducing execution time.

Automated Static Website Deployment to AWS S3 using Terraform [GitHub](#)

- Employed **Terraform** to automate the deployment of a static website to **AWS S3 Bucket**, created and configured the S3 bucket for public access and enabled static website hosting to ensure efficient file uploads.
- Implemented a streamlined process for deploying website updates by **automating** file uploads to the S3 bucket, significantly reducing deployment time and ensuring consistent website performance.
