

JYOTHI REDDY SEELAM

Java Full Stack Developer

Email: jyoreddy222@gmail.com | Phone: +12563658092 | LinkedIn: [Jyothi Reddy S | LinkedIn](#)

PROFESSIONAL SUMMARY:

- Over 5 years of professional experience in **Java Full Stack Development**, working across multiple domains using **Java**, **Spring Boot**, **Angular**, and **Microservices** to deliver robust and scalable enterprise applications.
- Expertise in developing backend components using **Java 8/11**, **Spring Boot**, **Spring MVC**, and **Hibernate**, focusing on clean code principles, high performance, and maintainability.
- Strong hands-on experience with frontend frameworks such as **Angular 12+** and **React.js**, developing user-centric and responsive web interfaces with high usability and dynamic content rendering.
- Implemented **RESTful APIs** and consumed external services using **Spring REST**, ensuring secure, scalable, and interoperable interfaces between microservices and third-party systems.
- Proficient in working with **SQL and NoSQL databases** like **MySQL**, **Oracle**, and **MongoDB** for data persistence and complex querying using **JPA** and **Hibernate**.
- Developed microservices architecture using **Spring Cloud**, **Eureka**, and **API Gateway**, enabling modular development, CI/CD integration, and better fault tolerance.
- Integrated **Kafka** messaging systems to enable asynchronous communication and real-time data processing in distributed systems with high throughput.
- Experience in **CI/CD** pipeline setup using **Jenkins**, **Maven**, **Git**, and **Docker** for automated build, test, and deployment processes in Agile environments.
- Proficient in developing and deploying cloud-native applications using **AWS EC2**, **S3**, **Lambda**, and **Elastic Beanstalk** to support scalable and high-availability applications.
- Extensive experience with **Agile/Scrum methodologies**, attending sprint planning, daily standups, reviews, and retrospectives to ensure transparency and rapid delivery.
- Skilled in **unit testing** and **integration testing** using **JUnit**, **Mockito**, and **Postman**, ensuring all components are thoroughly tested before deployment.
- Designed and consumed **SOAP web services** using **JAX-WS** and **Spring WS**, maintaining backward compatibility and supporting legacy systems.
- Strong understanding of **HTML5**, **CSS3**, **JavaScript**, **jQuery**, **Ajax** and **TypeScript**, building responsive UIs and optimizing page performance and accessibility.
- Used **Bootstrap** and **Material UI** for styling and layout enhancements across web pages, improving consistency and responsive design.
- Involved in performance tuning of APIs and database queries using **Java profiling tools** and **SQL optimizers**, reducing execution time significantly.
- Experience in **version control systems** like **Git** and **Bitbucket**, managing source code, branching strategies, and merge conflict resolutions in team environments.
- Built and managed backend services using **Spring Data JPA**, writing custom queries and projections for efficient and optimized data access patterns.
- Collaborated with **DevOps** teams to containerize applications using **Docker** and orchestrate them via **Kubernetes** in cloud environments.
- Around 2 years of **Mule ESB** experience with implementing service-oriented architecture(SOA) and enterprise application using **Mule Server 3.x**.
- Experience in integrating third-party services like **Twilio**, **Stripe**, and **SendGrid** for payment processing, notifications, and communications.
- Worked with **Swagger/OpenAPI** for API documentation and testing, making endpoints easily testable and transparent for frontend/backend teams.

- Experienced in **log management** and **monitoring tools** such as **ELK Stack** and **Splunk**, assisting in quick diagnosis and incident response.
- Familiar with **TDD** and **BDD** methodologies using **Cucumber**, **Selenium**, and **JUnit**, improving test coverage and code quality.

TECHNICAL SKILLS:

- **Languages:** Java 8/11, JavaScript, TypeScript, SQL, HTML5, CSS3
- **Java Technologies:** Spring Boot, Spring MVC, Hibernate, JPA, JUnit, Mockito
- **Web Technologies:** Angular (10–14), React.js, Bootstrap, Material UI
- **Databases:** MySQL, PostgreSQL, MongoDB, Oracle
- **ORM Frameworks:** JPA, Hibernate, Spring Data JPA
- **Web Services:** RESTful, SOAP, Swagger, OAuth2
- **Cloud/DevOps:** AWS (EC2, S3, RDS, Lambda), Azure, Docker, Kubernetes, Jenkins, Git, GitHub Actions, Bitbucket
- **CI/CD:** Jenkins, Azure DevOps, GitHub Actions
- **Version Control:** Git, SVN
- **Monitoring/Logging:** ELK Stack, Splunk, Log4j
- **Methodologies:** Agile Scrum, Kanban

PROFESSIONAL EXPERIENCE:

Advent Health

June 2024 – Present

Sr Java Full Stack Developer

- Developed robust healthcare applications using **Java 11**, **Spring Boot**, and **Hibernate**, enabling seamless patient appointment scheduling and centralized record management with real-time updates.
- Designed interactive and mobile-responsive UIs using **RxJs**, **TypeScript**, and **Bootstrap**, improving usability for both hospital staff and patients across different devices.
- Built and secured **REST APIs** with **Spring Boot** for patient intake, treatment status, and discharge modules integrated into a distributed microservices architecture.
- Implemented secure role-based authentication using **Spring Security** and **JWT**, ensuring only authorized users accessed sensitive patient data and internal hospital services.
- Configured **Docker** containers and deployed services on **AWS EC2**, enabling scalability and reducing manual infrastructure provisioning by over 50%.
- Leveraged **Kubernetes** for automatic scaling, fault-tolerance, and high availability of critical microservices such as EHR, billing, and lab results.
- Integrated **Twilio API** for sending automated SMS and voice notifications to patients about appointments, prescriptions, and test reports.
- Created reactive health dashboards using **RxJS**, displaying patient vitals, treatment updates, and staff schedules in real time.
- Built NoSQL repositories using **MongoDB** for unstructured data like scanned documents, doctor notes, and images, improving data retrieval performance.
- Utilized **Swagger** to document APIs and facilitate collaboration with frontend and QA teams across multiple departments.
- Conducted unit and integration testing with **JUnit** and **Mockito**, maintaining over 90% test coverage and minimizing defects in production.
- Created dynamic, department-specific forms using **RxJs**, allowing hospital admins to customize workflows without backend changes.

- Migrated legacy .NET modules into **Java Spring Boot microservices**, increasing maintainability and decreasing deployment time by 35%.
- Enabled single sign-on (SSO) through **OAuth2** integration, supporting secure login across multiple health systems with federated identity.
- Developed CI/CD pipelines using **AWS**, enabling fast and safe releases across staging and production environments.
- Implemented logging and monitoring using the **ELK Stack**, ensuring all application logs were traceable and filterable for real-time analysis.
- Used **Splunk** to create custom dashboards and alerts for proactive monitoring of errors, memory issues, and downtime.
- Designed and deployed a document upload module using **AWS S3**, securely storing insurance forms, consent forms, and scanned IDs.
- Followed **Agile Scrum** with sprint planning, retrospectives, and daily standups, collaborating with cross-functional teams across QA, DevOps, and Business Analysts.
- Participated in code reviews and pair programming, promoting best practices in **clean code**, **SOLID principles**, and unit testing.

Charles Schwab Bank

May 2021 – August 2023

Sr Java Full Stack Developer

- Developed secure, scalable financial transaction APIs using **Java 8**, **Spring Boot**, and **Spring JDBC**, enabling efficient management of user portfolios, trades, and real-time market data feeds.
- Designed and implemented responsive front-end components with **React.js**, **Redux**, **JavaScript**, **Html**, **Css** and **Bootstrap**, delivering a seamless and intuitive user experience across desktop and mobile platforms.
- Integrated the Plaid **API** to securely aggregate customer financial data from multiple external banking sources, enhancing data accuracy for portfolio analysis and reporting.
- Created robust authentication and authorization mechanisms using **Spring Security** and **JWT tokens**, protecting sensitive customer information and ensuring compliance with banking regulations.
- Developed an asynchronous, event-driven architecture using **Apache Kafka** to handle transaction events and notifications, improving system responsiveness and fault tolerance.
- Optimized complex SQL queries, stored procedures, and indexing strategies in **PostgreSQL** to boost performance in high-volume financial data processing scenarios.
- Automated build and deployment processes using **Jenkins**, **Docker**, and **Git**, reducing manual intervention and increasing release frequency and stability.
- Implemented unit and integration tests with **JUnit** and **Mockito**, ensuring robust validation of business logic and REST API endpoints with over 85% code coverage.
- Utilized **Swagger** for API documentation, facilitating clear communication between backend teams, frontend developers, and external API consumers.
- Containerized microservices using **Docker** and deployed to **AWS ECS**, enhancing scalability and enabling smooth rolling updates with zero downtime.
- Monitored application health and performance using **Splunk** and **Prometheus**, proactively identifying and resolving bottlenecks and errors before impacting users.
- Refactored legacy monolithic banking applications into modular **Spring Boot microservices**, significantly improving maintainability, scalability, and deployment speed.
- Coordinated closely with QA teams to implement automated UI testing with **Selenium WebDriver** and integration testing for complex workflows.
- Led sprint planning and backlog grooming sessions within **Agile Scrum** teams, fostering collaboration and ensuring timely delivery of new features and fixes.
- Implemented secure document upload and storage system using **AWS S3** with encryption for handling KYC and compliance-related documents.

- Enhanced customer-facing dashboards by integrating third-party visualization libraries such as **D3.js** and **Chart.js** for advanced portfolio analytics.
- Mentored junior developers on best practices in **Java**, **Spring Boot**, and frontend development, helping raise overall team skill levels and code quality.
- Participated in post-deployment support and troubleshooting, swiftly addressing production issues to minimize downtime and maintain customer trust.

Wayfire

June 2019 – May 2021

Java Full Stack Developer

- Developed and maintained core enterprise web applications using **Java 8**, **Spring MVC**, and **Hibernate**, enabling efficient order processing and inventory management workflows for retail clients.
- Designed dynamic, responsive web pages with **Angular 8**, **TypeScript**, and **Bootstrap**, improving the user interface and reducing page load times by 30%.
- Created and exposed **RESTful APIs** for integration with third-party logistics and payment gateways, facilitating real-time order tracking and secure payment processing.
- Implemented client-side form validation and reactive UI components using **Angular Reactive Forms** and **RxJS**, enhancing data accuracy and user experience.
- Optimized backend database operations with **MySQL**, creating stored procedures and indexing strategies that reduced query response times by 40% under peak loads.
- Integrated OAuth2-based **authentication and authorization** using **Spring Security**, ensuring role-based access control for admin and customer portals.
- Automated builds and deployments using **Maven**, **Jenkins**, and **Docker**, reducing deployment times and improving overall release quality.
- Conducted rigorous unit testing with **JUnit** and **Mockito**, achieving over 90% test coverage and improving application reliability and maintainability.
- Collaborated with UI/UX designers to translate wireframes into functional frontend code using **Angular Material** and custom CSS.
- Refactored legacy JSP-based views into modular **Angular components**, improving code reuse and simplifying maintenance efforts.
- Utilized **Git** for version control, managing feature branches and pull requests to ensure smooth team collaboration and code reviews.
- Developed asynchronous processing modules using **Java Concurrency API** and **ExecutorService**, improving system throughput for batch order processing.
- Integrated with external REST services for shipping carrier APIs, automating label generation and shipment tracking with **Spring RestTemplate**.
- Participated in daily **Scrum meetings**, sprint planning, and retrospective sessions, ensuring alignment with product owners and timely delivery of features.
- Enhanced system security by implementing input validation, parameterized queries, and protection against CSRF and XSS attacks.
- Improved error handling and logging using **Log4j2**, facilitating easier debugging and faster incident resolution.
- Worked closely with QA engineers to create detailed test cases and support integration and UAT testing phases.
- Migrated monolithic applications towards a modular structure, laying the foundation for future microservices adoption.
- Designed scalable database schema changes and implemented data migration scripts to support new business requirements.
- Provided post-production support and incident troubleshooting, resolving critical issues and ensuring high system uptime.

EDUCATION:

**Masters in Computer Science,
Jacksonville State University**
