EDUCATION

HACKBRIGHT ACADEMY, July 2024

- Cyber Engineering Student

CODE FIRST GIRLS DEGREE PROGRAM, June 2023

- Specialization in Software, Completed with Merit

RELAY GRADUATE SCHOOL OF EDUCATION, May 2020

- Masters of Arts in Teaching (5th-9th Grade Mathematics Concentration)

CORNELL UNIVERSITY, College of Agricultural & Life Sciences, May 2015

- Bachelors of Science, Applied Economics and Management

SKILLS/CERTIFICATIONS

- Programming Languages: Python, SQL, JavaScript, HTML, CSS
- Cybersecurity Tools: Wireshark, Nessus, Git, GitHub
- Cybersecurity Frameworks: Familiarity with NIST Cybersecurity Framework and ISO/IEC 27001
- Data Analysis and Visualization: Proficient in data collection, statistical analysis, and creating visual reports and dashboards
- Performance Evaluation: Skilled in conducting performance assessments and providing constructive feedback to optimize outcomes
- MS Office Applications: PowerPoint, Intermediate Excel, Outlook
- Adaptive Learning and Analytical Problem-Solving
- Google Data Analytics Certificate
- Multilingual: French, Arabic, Bambara

PROJECTS

Data Pipeline Development & ETL Processes (Code First Girls Bootcamp)

Developed and managed data pipelines as part of a simulated bootcamp project, focusing on building and improving ETL solutions using mock store data. Key tasks included:

- Constructed data pipelines to handle and process large-scale datasets, utilizing SQL for querying and Python for scripting.
- Implemented ETL processes to extract, transform, and load data from various sources, ensuring data integrity and consistency.
- Applied data validation techniques and performed quality checks to maintain accuracy in the simulated data environment.
- Created data visualizations and reports to provide insights and support decision-making based on the processed data.

PCAP Project using Wireshark

- Analyzed network traffic and captured packets using Wireshark to identify potential malicious activity.
- Conducted manual reviews of packet data to spot unusual patterns and behaviors, such as anomalous IP addresses, suspicious port activity, and unusual payload sizes.
- Applied knowledge of common network protocols (TCP/IP, HTTP, DNS) to differentiate between normal and abnormal traffic.
- Utilized various filtering techniques within Wireshark to isolate and examine suspicious packets in detail.
- Performed deep packet inspection to understand the content and context of network communications.
- Correlated findings with known attack signatures and threat intelligence sources to identify potential security threats.
- Documented findings and created detailed reports on network vulnerabilities and threats, including recommendations for remediation.

Quran Tracking App

- Developed a web application to help users track their progress in reading the Quran during Ramadan, applying software development and project management skills to deliver a functional product on time.
- Designed an intuitive, user-friendly interface using HTML, CSS, and JavaScript for easy navigation and interaction, demonstrating strong front-end development and user experience design skills.
- Enabled input of ayahs read, storing this data in a server-side SQL database to calculate the percentage of the chapter and entire Quran read, showcasing expertise in database management and data analysis.
- Implemented features for users to select the date and surah using a preloaded dropdown list with chapter and ayah information, emphasizing attention to detail and user-centered design.
- Displayed a progress bar visualizing the percentage of the Quran read to provide users with a clear sense of accomplishment, utilizing data visualization techniques.
- Included a feature for users to write reflections on each chapter after completion, promoting user engagement and content personalization.
- Added daily inspirational quotes to motivate and inspire users on their Quran reading journey, incorporating elements of user motivation and experience enhancement.
- Ensured the security of user data and application functionality by applying best practices in web development and data protection.

Interactive and Customizable Monopoly Game Development Project

- Collaborated in a four-member team to develop an interactive Monopoly game using Python and SQL, applying project management and teamwork skills to meet deadlines and deliver a high-quality product.
- Implemented core Monopoly rules, enabling users to customize player count, rounds, and difficulty, demonstrating strong problem-solving and analytical abilities.
- Led specific aspects: (1) Welcome page and player setup, (2) Land functions and debugging, (3) Casino and jail functions, (4) Database, Card function, and Testing, showcasing leadership and coordination.
- Utilized Test-Driven Development (TDD) for robust functionality, conducting extensive unit testing and mocking, ensuring code quality and reliability.
- Managed version control via GitHub, ensuring seamless code integration through code reviews and conflict resolution, highlighting experience with collaborative tools and best practices.
- Overcame challenges and optimized code for efficiency to achieve successful implementation, demonstrating adaptability and a continuous improvement mindset.

- Designed user-friendly interface with Tabulate and Prettytable libraries for enhanced gaming experience, emphasizing the importance of user experience and interface design.
- Conducted thorough system testing, evaluating performance across multiple user scenarios, ensuring a secure and efficient application.
- Addressed system limitations arising from user variability and proposed potential enhancements for future development, reflecting a proactive approach to risk management and continuous improvement.

Python Projects (Learn Python 3 Course)

- **Number Guessing Game:**
 - Developed a Python program that generates a random number within a specified range and allows the user to guess it.
 - Implemented features to provide feedback to the user on whether their guess was too high or too low, enhancing user interaction.
 - Utilized loops and conditional statements to create an engaging and dynamic user experience.
 - Applied error handling to manage invalid inputs, ensuring the robustness and reliability of the program.
 - Documented the code and provided comments to explain the logic and flow, demonstrating clear and maintainable coding practices.
- **Python Mad Libs:**
 - Created a fun and interactive game using Python that generates a story based on user input.
 - Designed a user-friendly input mechanism to collect various parts of speech (e.g., nouns, verbs, adjectives) from the user.
 - Implemented string manipulation techniques to dynamically insert user inputs into a pre-defined story template, showcasing proficiency in Python string operations.
 - Enhanced the user experience by incorporating error handling and input validation, ensuring the game runs smoothly and without interruptions.
 - Tested the game across different scenarios to ensure accuracy and enjoyment for the user, highlighting attention to detail and commitment to quality.

COURSES

Cyber Risk Management, Codecademy

- Enhancing cyber resilience, risk mitigation, and decision-making strategies.
- Developing practices, policies, and procedures to protect individuals and organizations.
- Acquiring skills in risk management techniques and analysis for informed decision-making.
- Gaining insights into trade-offs involved in cybersecurity strategies.
- Improving organizational cyber resilience through proactive measures.
- Establishing effective cyber analysis practices to identify and respond to potential threats.

PROFESSIONAL EXPERIENCE

Uncommon Charter School – Brooklyn, NY

Lead 6th Grade Mathematics Teacher/Instructional Coach

September 2016-Present

- **Performance Assessment:** Conducted comprehensive reviews of project plans and execution, offering detailed evaluations to drive improvements in performance and effectiveness. Applied analytical methods to assess and enhance team productivity and project outcomes.
- **Constructive Analysis and Improvement:** Provided data-driven feedback on project execution, identifying areas for optimization and implementing strategies to improve efficiency. Utilized insights from performance evaluations to support professional growth and advance team capabilities.
- **Data Analysis and Visualization:** Collected and analyzed student performance data using Excel and other tools to identify trends, gaps, and improvement opportunities. Created visual reports and dashboards to present findings to stakeholders.
- **Process Improvement:** Utilized data-driven insights to develop and implement strategies that improved student performance by 32% within 7 months. Continuously monitored and adjusted strategies based on data analysis.
- **Database Management:** Maintained and managed student performance databases, ensuring data accuracy and integrity. Used SQL for querying and extracting relevant data for analysis.
- **Statistical Analysis:** Applied statistical techniques to evaluate the effectiveness of teaching methods and interventions, leading to a 46% increase in student proficiency from October 2021 to March 2022.
- **Data-Driven Decision Making:** Engaged in regular data review sessions with school leadership to inform decision-making and action plans. Developed data-driven strategies that contributed to top percentile assessment results.
- **Technical Skills Application:** Adapted to virtual learning environments by leveraging technology to collect, analyze, and visualize student data, ensuring continuity and effectiveness of instruction.
- **Stakeholder Reporting:** Prepared detailed reports and presentations for parents and school leadership, translating complex data into actionable insights and recommendations.
- **Project Management:** Led projects to enhance curriculum based on data analysis, coordinating with multiple stakeholders to ensure timely and effective implementation.
- **Professional Development:** Conducted training sessions for teachers on data analysis and interpretation, enhancing the overall data literacy and performance tracking within the team.
