

CHINTA KEERTHI

Dallas, TX • (657) 468 7121 • keerthichinta047@gmail.com • [LinkedIn](#)

SUMMARY

Data Analyst with 3+ years of experience specializing in business process mapping, application modeling, and translating requirements into actionable solutions. Proficient in Agile and Waterfall methodologies, with expertise in crafting BRDs, FRDs, and RTMs. Skilled in Python (NumPy, Pandas, Matplotlib), R (ggplot2, forecasting), Tableau, Power BI, and advanced Excel functions. Experienced in database design (MySQL, PostgreSQL, AWS) and data visualization.

EXPERIENCE

American Express, Data and Research Analyst , contract

Apr 2023 - Present

- Participated in data integration tasks, utilizing Oracle tools to merge data from diverse sources.
- Utilized Azure DevOps for project management, source control, and CI/CD pipeline automation, enhancing collaboration and deployment efficiency.
- Collected and integrated diverse financial data from multiple sources using SQL queries and Python packages like Pandas and NumPy, ensuring data accuracy and consistency.
- Implemented data management and analysis tasks using PostgreSQL, leveraging its robust features such as indexing, transactions, and JSON support for reliable and scalable database solutions.
- Developed serverless applications with Azure Functions, reducing operational overhead and improving scalability.
- Created Python automation scripts for daily liquidity analysis, identifying trends and generating alerts, resulting in a 40% reduction in manual effort and a 50% decrease in ad-hoc reporting requests.
- Designed an ETL workflow using Informatica to extract customer data from multiple sources and load it into a centralized database, ensuring data quality and consistency.
- Mastered SAP Business Warehouse (BW) for efficient data extraction, transformation, and loading (ETL) procedures.

Prodigy Technologies, Associate Data Analyst

Jan 2023 – Apr 2023

- Collaborated with departments to develop and implement data workflows and operational changes, determining system configurations to enhance data processing efficiency.
- Conducted extensive data analysis and provided support using SQL throughout the project lifecycle, ensuring data accuracy and relevance.
- Assisted senior analysts and served as a team member on complex data projects, often reporting to a project manager.
- Contributed to defining data requirements, system design, architecture, functional specifications, user acceptance testing (UAT), data mapping, go-live planning, and post-implementation audits.
- Troubleshoot data-related issues, resolved operational questions, and addressed data anomalies while working with system analysts.

Cognibot AI Research Firm, Machine Learning Intern

Apr 2020 – May 2020

- Applied deep learning techniques to analyze customer data and predict upcoming issues in mobile devices, reducing downtime and improving customer satisfaction.
- Used Pandas, NumPy, Scikit-Learn, PyTorch, TensorFlow, Keras, Spark, Matplotlib, SciPy, and NLTK in Python for developing various machine learning algorithms and utilizing techniques such as Regression, Random Forest, Association Rules, Support Vector Machine (SVM), Logistic Regression, k-Means Clustering, Classification, and Deep Learning for data analysis.
- Implemented, tuned, and tested the model on AWS EC2 with the best-performing algorithm and parameters.
- Wrote and executed various MySQL database queries using Python MySQL connector and MySQL Db package.
- Worked with relational databases such as MySQL and SQL Server, as well as NoSQL databases on MongoDB.

Visualpath IT Solutions, Data Analyst Intern

Dec 2019 – Mar 2020

- Collaborated effectively with cross-functional teams, including HR and Operations, to develop capacity planning processes, optimize staffing, and conduct ad-hoc analyses using Tableau dashboards, showcasing key performance indicators (KPI) insights and key metrics reporting.
- Created interactive Tableau dashboards for real-time insights into workforce performance and resource allocation, providing stakeholders with clear and actionable data for enhanced decision making.
- Conducted exploratory data analysis on large datasets using SQL and Python, identifying trends, patterns, and actionable insights that resulted in over an 80% increase in the accuracy of risk assessment.
- Automated reporting to the team using Power BI, enhancing efficiency and visibility in risk management processes.

EDUCATION

University of North Texas, Master of Science – Computer and Information Sciences, *GPA: / 4*

Aug 2021 – Dec 2022

RVR & JC College of Engineering, Vellore, Bachelor of Technology – Computer Science and Engineering

Jun 2017 - Jul 2021

SKILLS

Languages: Python, SQL, HTML, CSS, JavaScript

Technologies/Tools: GCP, Jupyter Notebook, Visual Studio, Snowflake, Docker, Jenkins, Jira, Rally, Oracle, GitHub

Full-Stack Development: REST API, HTML5, CSS3, JavaScript, gRPC

Data & Analytics: SQL, NoSQL, Tableau, Excel, PowerPoint, Power BI, Excel VBA

Documentation: BRD, FRD, UAT, A/B Testing

Methodologies: Agile, Scrum, Waterfall, SDLC

Packages: NumPy, Pandas, Matplotlib, Seaborn, SciPy, Scikit Learn, ggplot2

Other Skills: Data Cleaning, Data Wrangling, Critical Thinking, Communication Skills, Presentation Skills, Problem-Solving, Data Analytics, Decision-making, Data Architecture, Data Management

CERTIFICATIONS

Google Cloud Platform- Google

Introduction to Blockchain Technology - NPTEL

Data Science for Engineers - NPTEL

PROJECTS

User Engagement Analytics Platform - Designed and developed a dynamic Q&A website emulating the core functionalities of Quora. Utilized MySQL for database management, PHP for server-side scripting, and HTML, CSS, and jQuery for front-end development.

Inventory Management Analytics System - Built a robust application for tracking book movement and maintaining member records in a library. Implemented MySQL for database management, PHP for backend development, and HTML and CSS for user interface design.

Predictive Market Analysis Model - Developed and deployed machine learning models to forecast gold prices using historical data. Leveraged Python, Apache Spark, and the Random Forest algorithm to ensure high prediction accuracy.

AI-Driven Property Valuation Tool - Created a deep learning model using Convolutional Neural Networks (CNN) to estimate real estate values. Employed OpenCV for image processing and TensorFlow and Keras for model development and training.
