Professional Summary

Full-stack software developer with 3+ years of experience. Proven expertise in Industry specific programming (M), C#, and React/TypeScript development within complex healthcare software environments. Skilled in designing scalable full-stack solutions that fit within external requirements, such as HL7 FHIR, and enhancing clinician workflows through user-centered design. Adept at agile collaboration and cross-team communication to deliver impactful, compliant software products.

Technical Skills

- Languages & Frameworks: M / MUMPS, C#, React, TypeScript, JavaScript, Python, SQL
- Frameworks & Platforms: Web delivered Healthcare platform, .NET
- Healthcare Standards: HL7, SMART on FHIR
- Databases & Analytics: Operational Database, Reporting Database (SQL)
- Tools & Methodologies: Git, Microsoft Loop, Automated Testing

Professional Experience

Software Developer

Epic Systems, Verona, WI | Oct 2022 – Present

- Recognized for leadership in responsive and high-quality code review.
- Led full-stack development on cross-team functionality, enhancing collaboration and integration across different research workflows.
- Collaborated with UX and operations teams to design intuitive workflows and user interfaces, improving clinician experience and usability.
- Developed and documented security models and compliance measures to protect sensitive data and ensure regulatory adherence.
- Spearheaded workflow automation for research encounter linking, improving billing accuracy and reducing manual errors.
- Authored and maintained key documentation, ensuring clarity and alignment across development and stakeholder teams.
- Balanced automation with user feedback to continuously improve processes and systems.

Education

Worcester Polytechnic Institute, Worcester, MA

Bachelor of Science in Mathematical Sciences, High Distinction | May 2021

Presidential Scholarship recipient and Meritorious Senior Award winner

Selected Project

Major Qualifying Project – Transport Network Optimization

Developed novel algorithms optimizing transport networks with ratio constraints, demonstrating advanced problem-solving and analytical skills applicable to software engineering challenges.
