Objective

Dedicated and innovative System Analyst with a robust foundation in Linux systems administration, database management, computer science theory, and AI. Currently advancing expertise through a Master's in Computer Science with a focus on Artificial Intelligence. Eager to leverage skills in high-performance computing environments, automation, database administration, and problem-solving techniques to drive technological innovation and contribute to organizational success across diverse industries.

Education

Master of Science, Computer Science (Artificial Intelligence)

Southern Methodist University, Dallas, TX

Expected: May 2025

Master of Science, Geology/Earth Science

University of Texas Permian Basin, Odessa, TX

July 2021 – December 2022 | **GPA: 4.0**

Demonstrating strong analytical ability and commitment to academic excellence

Bachelor of Science, Geoscience (Minor: Computer Information Systems)

Tarleton State University, Stephenville, TX

2015 – 2020 | **GPA: 3.5**

Solidifying diverse technical background and strong foundation in data analysis

Professional Experience

System Analyst & Database Administrator

University of Texas Permian Basin, Odessa, TX

May 2023 – Present

- **High-Performance Computing Leadership:** Spearheaded deployment and management of advanced Linux-based high-performance computing clusters, significantly enhancing computational efficiency and resource allocation through parallelization technologies, achieving 100%+ increase in system utilization
- **Database Administration:** Serve as Lead Database Administrator for all Microsoft SQL Server systems university-wide, ensuring optimal performance, security, and data integrity while implementing comprehensive backup and recovery solutions for mission-critical applications
- **AI Development & Integration:** Core developer and testing team member for UTPB's variation of the greater UT system AI project, implementing machine learning workflows, AI-assisted research tools, and automated intelligent systems supporting diverse academic and research initiatives
- **Security & Access Control:** Engineered robust access control solutions integrating PAM and LDAP, enhancing security measures while maintaining seamless user experience across research environments and ensuring compliance with institutional security standards
- **Automation & Optimization:** Innovated and automated system administration processes using Python, Bash, and VBA, optimizing performance monitoring, data management, and task automation, reducing workload redundancies by 30% and improving operational efficiency
- **System Reliability:** Diagnosed and resolved complex technical challenges in hardware, software, and network configurations, ensuring 99.9%+ uptime and optimal system performance across critical infrastructure components
- **Web Development & APIs:** Developed secure web portals and RESTful APIs for system access, user management, and real-time monitoring of computing resources, enabling seamless integration with existing university systems

- **Technical Documentation:** Authored comprehensive performance reports, system documentation, and operational procedures, supporting informed decision-making processes and continuous improvement of IT infrastructure

Technologies: Linux (RHEL/Rocky), SLURM, Kubernetes, Docker, Python, Bash, SQL Server, AWS, Azure, Git, REST APIs

Staff Geologist

Larson & Associates, Inc., Midland, TX

January 2023 – May 2023

- **Advanced Data Analysis:** Conducted in-depth geological analyses utilizing advanced data management software (Petra and Neuralog), contributing to discovery of new resource opportunities and enhancing geological understanding of target sites
- **Cross-Functional Collaboration:** Collaborated effectively with multidisciplinary teams to deliver data-driven insights that supported strategic exploration and production decisions in oil and gas operations

Graduate Research Assistant

University of Texas Permian Basin, Odessa, TX

July 2021 – February 2023

- **Database Development:** Led critical initiatives to develop and maintain the Geologic Core Research Repository and CUSP Cloud Databases, focusing on integrity and accessibility of large-scale geological datasets
- **Research & Analysis:** Performed comprehensive core and log analyses, integrating diverse data sources to generate actionable insights and advance geoscientific research objectives supporting academic publications

Technical Skills

Systems Administration & Infrastructure

- **Linux Systems:** Advanced proficiency in managing and optimizing Linux-based environments and high-performance computing clusters with hands-on experience in

Bright Cluster Manager and SLURM job schedulers

- **Database Management:** Microsoft SQL Server administration, performance tuning, backup/recovery, data modeling, and security implementation
- **Containerization & Cloud:** Docker, Singularity, Kubernetes, AWS, Azure enabling flexible and scalable computing solutions

Programming & Development

- **Scripting & Automation:** Advanced proficiency in Python, Bash, VBA for automating complex administrative tasks and enhancing system monitoring capabilities
- **Web Development:** Flask, JavaScript, HTML/CSS, RESTful API development and integration
- **Version Control:** Git, GitHub, collaborative development workflows

Networking & Security

- **Network Protocols:** In-depth knowledge of TCP/IP, UDP, multicast protocols
- **Remote Access:** SSH, RDP, VPN configuration and emulation software for secure remote access
- **Security Implementation:** Access control systems, authentication protocols, security best practices

Data Management & Analytics

- **Data Migration:** Expertise in data migration strategies between heterogeneous environments
 - **AI & Machine Learning:** Experience with AI model development, training, and deployment
 - **Data Processing:** ETL processes, data validation, large-scale dataset management
-

Certifications

- **CompTIA Linux+** (2018)
 - **CompTIA Security+** (2017)
 - **Percipio Python Journeyman & Pythonista** (2024)
-

Professional Affiliations

- **DELL Technologies HPC & AI Community**
 - **Texas Advanced Computing Center (TACC) Community**
 - **American Association of Petroleum Geologists (AAPG)**
 - **Geological Society of America (GSA)**
-

Key Achievements

- **Infrastructure Excellence:** Achieved 99.9%+ uptime across critical university computing infrastructure while implementing comprehensive monitoring and optimization systems
- **Performance Optimization:** Delivered 100%+ increase in HPC cluster utilization through strategic system optimization and user-focused improvements
- **Process Improvement:** Reduced operational workload redundancies by 30% through innovative automation solutions and streamlined administrative processes
- **Cross-Disciplinary Impact:** Successfully bridged technical expertise with domain knowledge across geology, computer science, and artificial intelligence disciplines
