EDUCATION

New York University

May 2025

Bachelor's of Science in Data Science / Analytics & Visualization

Relevant Coursework: Database Design, Principles of Data Science, Data Analytics II, Programing Tools for a Data Scientist, Advanced / Special Topics D.S Regression, Data Visualization II, Calculus III, Probability and Statistics

EXPERIENCE

Team One (Publicis)

Los Angeles, CA

Strategic Data Scientist / Advanced Analyst Intern

June 2023 — March 2025

- Implemented a real-time sentiment analysis pipeline on AWS with 90% accuracy, informing cross functional teams about audience engagement based on weekly insights delivered with automated dashboards
- Analyzed a CDP with SQL to identify user behavior, refined ad placements, and drove Lexus digital monetization strategy
- Engineered predictive models in Python to forecast monthly and year-end website traffic, guiding strategic decisions on high-traffic site investments and campaign planning
- Developed Tableau dashboards and analyzed KPIs with Pandas, enabling 20+ clients to optimize campaigns and improve ROI

Machine Learning Research Intern

Riverside, CA

University of California Riverside Research

January 2023 — June 2023

- Modeled a stock analysis application using XGBoost to model price movements, achieving average daily return rates of 1.6% through optimized model predictions
- Constructed an object-oriented Python pipeline to ingest and transform 500K+ stock data points from multiple APIs, enabling advanced market analysis and investment insights

University of California Berkeley

Remote

Bootcamp Financial Technology

May 2022 — November 2022

- Programmed Python scripts leveraging SQL and Pandas to extract and analyze 4 years of cryptocurrency data via Alpaca, delivering insights on volatility to guide risk-aware trading
- Organized and managed ETF data and financial Databases with MySQL, streamlining data analysis workflows
- Assembled Tableau dashboards monitoring 50+ cryptocurrencies, enabling data-driven strategies that increased ROI by 35%

PROJECTS

Car Company Marketing Campaign Performance

Python, GitHub, Tableau, Pandas

May 2025

- Monitored 50+ U.S markets to identify top performing marketing tactics by tracking delivered traffic and conversion rates
- Generated performance insights that drove a 30% reduction in low performing spendings and scaled high return strategies
- Built visuals on Python and Tableau to support quarterly planning, optimize media investment, and guide stakeholder decisions

Taxi Tipping Prediction

Python, SQL, Statistical Algorithms, DuckDB

March 2025

- Designed an end-to-end pipeline to preprocess 2.5M+ NYC taxi records; trained Random Forest models to predict tipping behavior with up to 80% AUROC
- Reduced dimensionality with PCA and KMeans, enabling behavioral groupings and improving performance by 6%

Realestate of Mind

Python, SQL, Pandas, Web Application

July 2022

- Led a team to build an application analyzing Zillow data with Monte Carlo and MACD simulations for forecasting investment
- Integrated 25 years of county property data in SQL to create 3D models highlighting greater investment regions
- Analyzed over 150,000 property records to deliver actionable insights that improved forecasting and data driven decisions

TECHNICAL SKILLS AND ABILITIES

- SQL, Python (Numpy, Pandas, PySpark, Scikit-learn), Tableau, Databricks, AWS, Microsoft Excel, JupyterLab, GitHub
- Data Analysis, Statistical Analysis, Machine Learning Modeling, Predictive Analysis, Causal Inference, Bayesian Inference, Data Visualization, Ad Performance Optimization, Microsoft Outlook
