TECHNICAL SKILLS

Languages and DataBases: Java, Python, C++, JavaScript, React, Angular, JQuery, HTML/CSS, SQL, MySQL

Tools and Platforms: GitHub, Azure, AWS, GCP, Dialogflow CX, IntelliJ, Maven, Gradle, Linux/Unix, Terraform, Spring Boot

Skills: Cloud Computing, Cloud Security, LLMs, CI/CD Pipelines, Agile Methodology

EDUCATION

Florida State University

Bachelor of Science in Information Technology

May 2020

Tallahassee, FL

WORK EXPERIENCE

General Motors

May 2021 – September 2024

Software Engineer

Roswell, GA

- Participated in multiple engineering projects, adapting and applying software and automation solutions, conducting testing, and preparing detailed technical reports and documentation to support cross-functional teams.
- Developed and maintained clear system documentation, including API specifications, design diagrams, and business requirements to ensure accuracy and knowledge sharing.
- Designed and deployed serverless APIs using Azure Cloud Functions and event-driven architecture, improving scalability, reducing costs, and supporting continuous system improvement for over 6 million customers.
- Collaborated with system engineers to define requirements, analyze data flows, and align solutions with strategic technology goals.
- Built and migrated Spring Boot applications to Azure, integrating cloud services (Storage Accounts, Cognitive Search, Key Vault) and achieving measurable system performance improvements.
- Created and maintained CI/CD pipelines with GitHub Actions, ensuring automated testing, one-click deployments, and reduced release errors by 50%.
- Partnered with cross-functional teams in an Agile environment to contribute to technology strategy, share ideas for innovation, and continuously learn new technologies for system optimization.
- Communicated technical concepts and project updates to both technical and non-technical stakeholders, ensuring alignment across teams.

FSU College of Communication & Information

May 2019 – June 2021

Research Assistant – Language Learning Application Developer

Tallahassee, FL

- Designed and developed interactive language-learning applications, applying full-stack software solutions using HTML, CSS, JavaScript, and React to improve student engagement.
- Documented system designs, technical requirements, and testing results to support faculty research projects and ensure reproducibility.
- Prototyped alternative interfaces with Angular, comparing performance and analyzing data flows to recommend improvements in usability and maintainability.
- Collaborated with professors and student teams to share findings, present results, and communicate technical ideas in a clear and accessible way.
- Contributed to continuous system improvement by introducing new features and suggesting innovative design approaches for educational tools.

The Children's Campaign

August 2018 – October 2018

Database Administrator & Web Developer Intern

Tallahassee, FL

- Installed, configured, and maintained software and hardware systems, assisting with troubleshooting to support reliable system operations.
- Analyzed web performance using Google Analytics and SQL queries, preparing reports and actionable insights to guide decision-making.
- Developed and maintained WordPress-based websites using HTML5 and MySQL, with a focus on documentation and optimization for enhanced system performance.
- Assisted staff with technical issues and maintained clear communication and customer service while resolving support requests.
