

Pranjalee Kshirsagar

Boise, Idaho / +1 215 594 5807/ prkshirsagar.5@gmail.com

SUMMARY

Detail-oriented **DevOps and Cloud Engineer** with **6+ years** of experience automating, securing, and scaling **Linux-based infrastructure** across **AWS, Azure**, and hybrid environments, with working knowledge of **GCP**. Strong Linux administration foundation and expertise in cloud deployments, containerization, and CI/CD automation. Skilled in Docker, **Kubernetes (EKS, AKS, OpenShift)**, **Terraform, CloudFormation**, and **AWS CDK**. Proficient with CI/CD tools (**Jenkins, GitHub Actions, Azure Pipelines**) and monitoring stacks (**Prometheus, Grafana, CloudWatch, ELK**). Familiar with applying AI/ML models, Generative AI techniques, and cross-platform application development. Proven record of reducing deployment time, improving reliability, and driving compliance through automation.

SKILLS

- **Cloud & Virtualization:** AWS (EC2, EKS, Fargate, S3, RDS, DynamoDB, Route 53, ALB/NLB, IAM, CloudFormation, Lambda), Azure (VMs, AKS, Key Vault, App Gateway, Azure Monitor/Log Analytics, Storage, Azure DevOps/Pipelines, IAM), GCP (GKE, Compute Engine, Cloud Storage, IAM — familiarity), VMware, Docker, Kubernetes, OpenShift.
- **IaC & GitOps:** Terraform, Ansible, CloudFormation, ARM Templates, Jenkins, GitHub Actions, Azure Pipelines.
- **Monitoring & Observability:** Prometheus, Grafana, ELK, CloudWatch, Azure Monitor.
- **Security & DevSecOps:** SELinux, CIS Benchmarks, firewallld, IAM Policy enforcement.
- **Operating Systems:** Linux (RHEL 6/7/8), Windows.
- **Networking:** HAProxy, nginx, load balancers, VPN, bonding, VLANs, iptables, system.
- **Programming & Scripting:** Bash, Python, Java, PowerShell, HTML/CSS, JavaScript.
- **Deployment & Orchestration:** Helm, ArgoCD, Blue-Green Deployments, Canary Releases.

EDUCATION

Master of Science: Computer Science
Drexel University

Philadelphia, PA
(Graduation: June 2025)

Bachelor of Technology: Information Technology
SGGS College of Engineering and Technology

India
(Graduation: May 2017)

EXPERIENCE

Amdocs Technology

Cloud Engineer

(June 2022 – Jan 2024)

- Designed and deployed secure, scalable AWS infrastructure using services such as **EC2, S3, IAM, and RDS**, leveraging CloudFormation templates to ensure consistent, repeatable, and compliant infrastructure provisioning across multiple environments.
- Built and maintained containerized application environments using **Docker**, and implemented orchestration using **Kubernetes and Amazon EKS**, resulting in a **40%** reduction in deployment time and improved scalability.
- Implemented **Azure AKS clusters** and integrated **Azure Pipelines** into **CI/CD** workflows to complement AWS workloads.
- Supported hybrid adoption by testing workloads on **GCP (GKE, IAM, Compute Engine)** for POCs and validation.
- Built IaaS landing zones on **AWS and Azure** (**VPC/VNet, subnets, NAT/IGW, NSG/NACL**, centralized logging) enabling compliant, repeatable environment provisioning across dev→prod.
- Integrated platform monitoring with **CloudWatch / Azure Monitor** and CI/CD telemetry (**Jenkins / GitHub Actions / Azure Pipelines**) for change visibility, alerting, and release audits.
- Automated **CI/CD** pipelines using **Jenkins, GitHub Actions, Azure Pipelines and Terraform** by adopting a **GitOps**-based delivery model, which reduced manual deployment tasks by 60% and improved code reliability and consistency.
- Participated in **Agile/Scrum** practices, including daily stand-ups, sprint planning, and retrospectives, which

strengthened collaboration between development and operations teams and increased sprint throughput.

- Executed **blue-green** and **canary** deployments, significantly minimizing production downtime and reducing service disruption during application updates by up to **70%**.
- Created modular and reusable Terraform configurations for provisioning **multi-cloud resources(AWS, Azure)** with version control.
- Implemented a comprehensive observability stack using **Grafana, Prometheus, and Kubernetes metrics**, enhancing alerting capabilities, root cause analysis, and system performance diagnostics.

Kyndryl

System Administrator

(Sep 2021 - June 2022)

- Managed and supported over **1,500 RHEL** servers by applying security patches and remediating kernel-level vulnerabilities such as **Spectre** and **Meltdown**, ensuring compliance and high availability.
- Containerized legacy monolithic applications using **Docker** and deployed them using **OpenShift, Kubernetes and Azure AKS** improving scalability and reducing resource utilization by **35%**.
- Created **shell scripts** for automating patch management, **failover testing, and system health checks**, minimizing manual intervention and enhancing SLA adherence.
- Built **Terraform** configurations to provision VMs and cloud resources (**AWS + Azure**), cutting provisioning time by 60%..
- Configured centralized logging using the **ELK** stack, significantly improving log visibility and enabling compliance-ready audits.
- Deployed applications through **Azure DevOps** pipelines, enabling faster release cycles for client workloads.
- Supported change management procedures with **ITIL-compliant** records and emergency maintenance.
- Hardened **RHEL** hosts for IaaS application tiers using **SELinux** and **CIS** baselines; enforced **network segmentation** (private subnets, **NSG/NACL**) and least-privilege **IAM** across environments.
- Improved **HA/DR** readiness on **AWS/Azure IaaS** with runbooks, periodic failover checks, and monitored replication paths; routed signals into centralized alerting to reduce recovery time.

IBM

System Administrator

(Jan 2018 - Sept 2021)

- Installed and maintained **RHEL** servers, performed kernel upgrades, and applied sysctl tuning to optimize performance across mission-critical systems.
- Automated **backup** and **provisioning** processes using **Bash, crontab, rsnapshot, and rsync**, reducing manual workload by **50%** and ensuring consistent backups across environments.
- Managed and configured essential Linux services such as **YUM, DHCP, DNS, FTP, Apache, LDAP, and the LAMP stack**, ensuring secure and stable system configurations.
- Developed advanced **Unix shell scripts** to monitor uptime, disk space, and service health, generating automated alerts to support proactive system monitoring.
- Troubleshooted and resolved complex network issues **involving VLANs, bonding, and static/DHCP** configurations, reducing network downtime by **40%**.
- Prepared **Linux** images and shared services for **IaaS** workloads (**sysctl/limits, baseline hardening, /shared NFS, package repos**) to standardize fleet builds and patching.
- Delivered secure connectivity and web tier patterns using **HAProxy/Nginx** L7 proxying, **TLS** termination, and firewall rules—supporting highly available internal and internet-facing IaaS services.
- Built **DR** workflows using **AWS Backup and Azure Storage**, enabling secure offsite redundancy.
- Conducted **OS-level security audits, SSH hardening, and iptables tuning**, improving system security by **30%**.

CERTIFICATIONS

- AWS SysOps Administrator
- RedHat Certified System Administrator (RHCSA)
- RedHat Certified Engineer (RHCE)
- Python for Data Science
- Data Science (IIT Kharagpur)
