Summary Details:

Data Analyst with 4+ years of experience delivering data-driven insights, building BI dashboards, and optimizing ETL workflows across finance, healthcare, and insurance domains. Highly skilled in SQL, Python, Tableau, Power BI, and cloud data warehousing (Snowflake, AWS Redshift). Proven track record of improving reporting efficiency, reducing manual workload by 40%, and enabling leadership decision-making through accurate analytics, automation, and KPI reporting.

- Strong proficiency in SQL (PostgreSQL, MySQL, Oracle) with expertise in writing complex queries, joins, CTEs, and query optimization for large-scale data environments.
- Delivered measurable impact including 15% cost savings and 40% reduction in manual reporting time through automation, dashboarding, and cloud analytics.
- Skilled in Tableau, Power BI, and Looker for developing interactive dashboards, tracking KPIs, and providing leadership with real-time performance insights.
- Proven expertise in writing and optimizing T-SQL queries for data validation, transformation, and reporting across healthcare, finance, and insurance domains.
- Proven ability to translate complex data into actionable business insights for cross-functional teams and executive leadership.
- Adept at stakeholder engagement, business process optimization, and delivering data-driven recommendations that improve operational efficiency and financial performance.
- Advanced proficiency in Excel (PivotTables, Power Query, VLOOKUP, Macros) for automation, data transformation, and reporting efficiency.
- Experience in Google Analytics and Adobe Analytics for monitoring web traffic, analyzing customer engagement, and optimizing marketing performance metrics.
- Hands-on experience with Alteryx and KNIME for drag-and-drop data blending, cleansing, and workflow optimization.
- Proficient in building and maintaining ETL pipelines using Azure Data Factory (ADF) for cloud-based data integration.
- Practical knowledge of machine learning (scikit-learn, XGBoost, TensorFlow, PyTorch) with applications in regression, classification, and predictive modeling.
- Strong background in ETL tools (Informatica, Talend, Apache NiFi, SSIS) for integrating and transforming data from multiple sources into structured warehouses.
- Proficient in cloud platforms (AWS, Azure, GCP) with expertise in Redshift, Synapse, and BigQuery for cloud-based analytics and large-scale reporting.

- Experience in real-time data processing using Apache Kafka and Spark Streaming for near real-time analytics and decision-making.
- Strong hands-on experience with Snowflake Data Warehouse, including query optimization, computer resource management, and supporting enterprise-level workloads.
- Proficient in Jupyter Notebook for exploratory data analysis, model evaluation, and stakeholder reporting.
- Experienced in API integrations for automated data extraction and workflow efficiency.

Technical Skills:

- Programming Languages: SQL (T-SQL / PL/SQL) , Python, R, JavaScript
- Data Analysis & Statistical Tools: Excel (Advanced), SAS, SPSS
- Business Analysis & Strategy: KPI Definition & Tracking, Strategic Planning Support, Data-Driven Decision Making.
- Data Visualization: Tableau, Power BI, Looker, QlikView
- ETL Tools: Informatica[PowerCenter], Alteryx, Talend, Apache Nifi
- Big Data Technologies: Hadoop, Spark, Snowflake, Apache Hive
- Machine Learning: Scikit-learn, TensorFlow, PyTorch, Keras
- Databases & Data Warehousing: MySQL, PostgreSQL, Oracle, Teradata, Amazon Redshift
- Cloud Platforms: AWS, Google Big Query, Microsoft Azure, Snowflake.
- Statistical Analysis: SciPy, Stats models.
- Data Wrangling: Pandas, NumPy, Dplyr
- Web Scraping & APIs: BeautifulSoup, Selenium, Postman
- Automation & Scripting: VBA (Excel), Power Automate, Bash
- Version Control: Git, GitHub
- Collaboration & Project Management: JIRA, Confluence, Microsoft Teams
- Dashboarding & Reporting: Google Data Studio, Zoho Analytics
- Natural Language Processing (NLP): NLTK, spaCy
- Data Encryption & Security: SSL/TLS, AWS KMS, GDPR
- Data Automation & Workflow Orchestration: Apache Airflow, Luigi
- Data Cleaning & Preprocessing: Open Refine, Trifacta

Education Details:

Master of Science in Information Systems Technology Assurance
Wilmington University, New Castle, Delaware | 2023 – 2025

Bachelor of Engineering in Civil Engineering
Vels University, Chennai, India | 2017 – 2021

Professional Experience:

Senior Data Analyst

OneMain Financial, USA

Jan 2024 - Present

- OneMain Holdings, Inc. is an American financial services holding company.

Responsibilities:

- Led end-to-end financial and operational data analysis using SQL, Python, and R, delivering actionable insights for budget forecasting, resource allocation, and employee services optimization.
- Engineered scalable ETL workflows using Talend and NiFi to unify HR, procurement, and finance data into analytics-ready formats.
- Led cross-functional data governance initiatives, including stewardship of financial and HR data, metadata standardization, and lineage documentation for audit readiness.
- Built executive-facing dashboards in Tableau and Power BI to visualize budget utilization, procurement efficiency, and service delivery metrics.
- Collaborated with business stakeholders across finance, HR, and procurement to define reporting needs, KPIs, and performance metrics.
- Executed complex SQL queries (joins, CTEs, window functions) to extract and transform enterprise datasets for financial forecasting and operational analysis.
- Facilitated requirements gathering sessions and translated business needs into technical specifications for analytics solutions
- Developed and optimized T-SQL queries for budget forecasting, employee services analytics, and financial reporting across large enterprise datasets
- Developed and deployed interactive dashboards in Tableau, Power BI, and Snowflake to track agency-wide KPIs, budget utilization, procurement efficiency, and service delivery metrics.
- Engineered real-time big data processing workflows with Hadoop, Spark, and AWS S3 to enhance operational efficiency, contract management, and performance audit reporting.
- Applied MLOps best practices to deploy ML models via CI/CD pipelines (GitLab, Jenkins) and containerized environments (Docker, Kubernetes), enabling scalable and resilient analytics solutions.
- Managed secure, high-performance cloud data environments in Snowflake and Redshift to support enterprise-wide analytics.
- Automated data ingestion, reporting, and compliance workflows using RESTful APIs, Apache Airflow, SAS, and Python, reducing manual reporting time by 40% and enabling near real-time decision-making.
- Used Python and Hive to wrangle large datasets and create audit-ready visualizations for compliance and financial reporting.

Environment: SQL (T-SQL, PL/SQL), Python, R, Tableau, Power BI, Snowflake, Hadoop, Spark, AWS (S3, Redshift), Informatica, Talend, Apache-NiFi, Airflow, GitLab, Jenkins, Docker, Kubernetes, Scikit-learn, TensorFlow.

Data Analyst / Business Data Analyst

Elanco, USA

Feb 2023 - Dec 2023

- Elanco Animal Health Incorporated is an American pharmaceutical company which produces medicines and vaccinations for pets and livestock.

Responsibilities:

- Engineered scalable ETL workflows using Informatica PowerCenter, Azure Data Factory, Informatica, and Talend to automate ingestion of pharmaceutical and production data, improving reporting speed and data reliability.

- Developed interactive reporting dashboards in Power BI and Tableau to help leadership monitor KPIs, optimize resource allocation, and improve operational efficiency.
 - Applied predictive modeling techniques (TensorFlow, scikit-learn, Python, R) to forecast energy demand, detect equipment failures, and enhance refinery throughput.
 - Delivered executive-ready insights through data storytelling, enabling strategic decisions on cost control and production planning.
 - Migrated legacy reporting workflows to Azure Synapse, improving query performance and scalability for enterprise datasets.
 - Structured production and financial datasets using dimensional modeling techniques, ensuring consistency, scalability, and governance across analytics workflows.
 - Implemented automated T-SQL validation logic to detect anomalies and ensure data integrity across HL7 submissions and provider feeds.
 - Processed large-scale datasets using Hadoop, Spark, Databricks, and PySpark to identify process deviations, quality issues, and supply chain delays.
 - Leveraged real-time streaming platforms (Kafka, Kinesis, Azure Event Hubs) to monitor sensor and transactional data for anomaly detection and continuous production flow.
 - Partnered with finance and production teams to deliver actionable insights on cost drivers, equipment uptime, and energy usage, supporting executive decision-making.
 - Collaborated with compliance and IT teams to define data retention policies, enforce stewardship roles, and ensure regulatory adherence across pharmaceutical datasets.
 - Partnered with finance and production teams to deliver actionable insights on cost drivers, equipment uptime, and energy usage, supporting executive decision-making.
- Environment: SQL, Hive, Snowflake, Python, R, Tableau, Power BI, QlikView, Azure Data Factory, Informatica, Talend, Hadoop, Spark, Databricks, PySpark, TensorFlow, Scikit-learn, Kafka, Kinesis, Azure Event Hubs.

Data Analyst / Business Data Analyst

Acko Insurance, Bangalore, India

Jan 2021 - Nov 2021

- Acko Insurance is a private sector general insurance company in India.

Responsibilities:

- Designed scalable data models and ETL pipelines using SQL, Snowflake, and Python to support real-time financial reporting and customer risk profiling.
- Partnered with product, risk, and compliance teams to define business rules, reporting logic, and fraud detection thresholds, aligning analytics with regulatory standards.
- Delivered interactive KPI dashboards in Tableau, Power BI, and Looker to help fraud and credit teams monitor chargeback rates, delinquency trends, and spend velocity.
- Automated ingestion of multi-source customer and merchant data using Informatica, Talend, Alteryx, and AWS Redshift, reducing manual effort by 35%.
- Built predictive models for credit default risk, fraud probability, and churn using scikit-learn, TensorFlow, and R, improving underwriting and retention strategies.
- Developed real-time transaction pipelines using Apache Kafka, Spark, and AWS Kinesis to enable instant fraud detection and credit decisioning.
- Conducted segmentation and predictive analysis with SAS, R, and Excel to personalize marketing strategies and improve pricing accuracy.

- Defined stewardship roles and implemented data governance checkpoints in ETL workflows to ensure schema consistency and anomaly detection.
- Collaborated with risk and compliance teams to align analytics workflows with regulatory standards, supporting data governance and audit readiness.

Environment: SQL, Python, R, Excel, Tableau, Power BI, Looker, Snowflake, AWS Redshift, Informatica, Talend, Alteryx, Kafka, Spark, AWS Kinesis, TensorFlow, Scikit-learn, SAS.
