Professional Experience

Associate Business Analyst, LogixHealth

Bedford, Massachusetts, October 2022–September 2024

Served as liaison between business stakeholders and Agile technical teams to drive business and organizational goals via prioritized product backlog items.

Responsible for defining user stories and prioritizing the scrum team's sprint backlog. Provided backlog management, iteration planning, and elaboration of user stories. Managed dependencies in and across sprints and releases.

Business Analyst III/Agile Product Owner, The TJX Companies, Inc.

Framingham, Massachusetts, February 2011–October 2019

As Agile Product Owner, partnered directly with product management, business sponsors, key stakeholders, and agile scrum team to ensure delivered solutions met the product vision and business objectives.

Conducted business analysis across the project life cycle for numerous projects. Responsible for solution requirements elicitation and documentation, including process flows, use cases, preliminary data models, entity relationships, and definition of features; project scoping and estimating; process development; project issue and risk management; creation and execution of test scripts; and project implementation.

Sr. Business Analyst, The TJX Companies, Inc. (Contracted through JVT Advisors)

Framingham, Massachusetts, July 2008–February 2011

Responsible for providing business analysis and configuration support for the customization and implementation of the Store Lifecycle Management (SLM) application for the Property Development group. Analyzed existing business processes and conducted interviews with end-users to capture system requirements, identify issues, and optimize the application to support the property development process.

Produced functional specification documents for the development of SLM reports, forms, and dashboard objects. Performed post-development testing. Created Conference Room Pilot (CRP) scripts and participated in CRPs with users to validate business requirements, demonstrate systems features, and elicit user feedback. Created test plans and conducted User Acceptance Testing (UAT).

Developed templates for the functional specification document, functional specification status tracking matrix, and issue list for the SLM project.

Business Analyst, Analysts International Corporation

Lansing, Michigan, February 2002–September 2007

Engaged with numerous government and private sector clients on diverse IT projects, both at the client site and via telecommuting.

Participated in Plan and Define phase for automotive manufacturer online retailing project to provide enhancements to customers' online experience. Met with stakeholders and technical teams to understand system requirements. Utilized UML to model Use Case and System Boundary diagrams. Produced System Requirements Specification and detailed Use Case documents. Employed Traceability Matrix to map business requirements to use cases and system requirements.

Participated in facilitated Joint Application Development (JAD) Business Requirements, Technical Considerations, and document review sessions with business stakeholders, SMEs, and end-users for numerous state department of transportation projects.

Software Engineer Intern, Analysts International Corporation

Lansing, Michigan, June 2001–February 2002

Responsible for various software development tasks including authoring, editing, and testing computer code; authoring and editing design documents and user manuals; end user training; and producing process flow diagrams and data models to meet business and technical needs.

Education and Training

Computer Information Systems, Lansing Community College

Lansing, Michigan, 2000–2001

Coursework in web development and several computer programming languages and applications, including Visual Basic, Java, Active Server Pages, CGI, Perl, VBScript, and JavaScript.

BA, Michigan State University

East Lansing, Michigan, May 2000.

Psychology, with High Honor.
