SUMMARY

Computer Science graduate with hands-on full-stack software engineering experience building web applications, backend systems, and data-driven software projects. Proficient in Python, JavaScript, TypeScript, and Linux environments, with experience developing APIs, validation pipelines, blockchain-based data systems, and production websites. Strong foundation in debugging, Git workflows, and software architecture, with a demonstrated ability to learn quickly, and collaborate effectively.

EDUCATION

B.S Computer Science, Cum Laude May 2025
Arizona State University, Tempe, AZ 3.51 GPA

A.S Computer Science December 2022
Mesa Community College, Mesa, AZ

SKILLS

Programming Languages: JavaScript, C/C++, C#, Python, Bash, PowerShell, CMD
Front-End: HTML, CSS, Bootstrap, React, Next.js, Tailwind CSS
Backend & Data: Node.js, REST APIs, JSON Schema Validation, SQL, PostgreSQL, Data Processing Tools, Databases, and OS: SQL, PostgreSQL, Git, Github, Windows, Linux/Unix, Office 365

SOFTWARE PROJECTS

Meaning: The Glossary <https://github.com/Duder963/meaning-the-glossary>

- Developed a full-stack web application that provides searchable access to Magic: The Gathering terminology through a responsive user interface.
- Implemented fuzzy-search functionality and dynamic filtering to efficiently handle large glossary datasets.
- Built data validation workflows using Node.js and JSON Schema to maintain data integrity and automate consistency checks.
- Utilized Git-based version control and iterative development practices to manage project enhancements and feature delivery.

Expense Tracker <https://github.com/Duder963/expense-tracker>

- Utilized Claude Code to develop a web-based tracker of bank transactions and expenses
- Collects imported information and sorts by category, with options to visualize data
- Allows for custom categories and recategorization of imported transactions for accurate analysis

Educational Digital Experience - Lunar Experience February 2024 - May 2024

- Utilized Unity engine with C# to construct a three stage interactive educational experience for students detailing scientific elements of going to moon
- Devised systems for picking up game objects, combining two objects together, tracing position from a certain point, and modifying gravity for different scenes

WORK EXPERIENCE

Website Developer - Clear For The Option/Miller Aviation Training Tech February 2026 - May 2026

- Built and deployed two production-ready websites using Webflow with responsive design and optimized page structure.
- Planned and structured digital advertising campaigns in Google Ads for two businesses, including keyword research, targeting strategy, and budget planning.
- Managed social media account, posting regular content to raise and maintain brand awareness
