Summary

Software Engineer with 8+ years of backend and full-stack experience. I specialize in building API-driven systems, scalable microservices, and cloud-native applications. My background in enterprise Java systems strengthens my ability to design reliable, high-performance backends used by millions of users.

Education

Master Of Software Engineering - Lutsk National Technical University

Skills

Backend	Spring Boot, Java, Kotlin, XML/JSON/YAML, RESTful APIs, JWT, OAuth2, Kafka, RabbitMQ
Databases	SQL, MySQL, PostgreSQL, NoSQL, Elasticsearch, Redis, Hibernate
CI/CD	Kubernetes, Docker, Git, GitHub, Azure DevOps, Gitlab, Firebase
Cloud	Azure, AWS, Terraform, Azure App Services, S3, EC2, RDS, Datadog, GCP
Frontend	React.js, JavaScript, Redux, HTML, CSS, jQuery, Dart, Flutter
Testing	Mocha, Junit, Mockito, Jest, Selenium
Soft Skills	Leadership, Project Management, Mentoring & Team Development, Cross-Functional Collaboration, Technical Communication, Rapport Building, Software Documentation, Time Management, Research and Development.

Professional Experience

Full-Stack Software Engineer (Overhaul) – Enterprise shipment tracking platform **Mar 2023 – Oct 2025**

- Led modernization of enterprise logistics platform; migrated UI from React.JS to Flutter, cutting load times by **60%**.
- Developed Kotlin API microservices and improved data consistency.
- Automated CI/CD with GitHub Actions, accelerating deployments by **50%** and reducing human error.
- Collaborated with cross-functional teams to resolve production defects, increasing system uptime to **95%**.
- Strengthened code security through static analysis.

Full-Stack Lead Software Engineer (LittleAmerica) – Retail (**Part time**) **Feb 2023 – Now**

- Architected multi-tenant sales platform backend using Java/Kotlin and Spring Boot.
- Managed teamwork and planned sprints in collaboration with the founders.
- Integrated caching and query optimizations that cut database load and boosted response time.
- Delivered Flutter apps and admin dashboard that increased user satisfaction scores by **25%**.
- Implemented CI/CD pipelines and monitoring, reducing production deployment issues by **40%**.
- Developed Flutter mobile application and web site features aligned with business requirements.

Full-Stack Senior Software Engineer (Atlassian) – Atlassian Jira Software **Jul 2021 – Mar 2023**

- Created automated test suites increasing coverage from **55% to 88%**, reducing regression defects by **30%**.
- Collaborated with Agile teams to improve sprint delivery consistency and code quality.
- Developed modern UI using React.JS.
- Provided mentorship to new employees and helped them gain new level of proficiency.
- Engineered and optimized core Jira modules using Java/Kotlin and Spring Boot, participated development of API microservices, improving data synchronization efficiency, and enabling large-scale cloud migration of **1M+** records for enterprise clients.

Fullstack Software Engineer (Windorfspro Ukraine) - Woodland production **Feb 2020 – Jun 2021**

- Designed **Android Native** (Java/Kotlin) application and Spring Boot backend to track woodland production from scratch.
- Implemented paperless data processing has reduced the time required by 70%.
- Made synchronization with a local financial platform, eliminating manual data entry and **saving over 20h/week**.
- Built monitoring scripts to ensure **24/7 system reliability**.

Full-Stack Software Engineer – Healthcare **Jan 2019 – Jun 2020**

- Designed and built scalable backend services and mobile application for medical analytics, supporting real-time health **data processing for 5K+ simultaneous users**.
- Optimized data pipelines and SQL queries, reducing response time by 40% and improving scalability and application load times.
- Automated test execution pipelines, increasing test coverage and cutting release defects by **25%**.
- Implemented push notifications and modern UI components that boosted user engagement by **35%**.

Full-Stack Software Engineer - Retail **Dec 2017 – Jan 2019**

- Enhanced backend and frontend functionality, introducing secure authentication and encryption protocols that reduced vulnerabilities by **40%**.
- Refactored legacy modules and refined SQL queries, improving application performance by **45%**.
- Collaborated with cross-functional teams to identify and patch critical issues, increasing platform stability and uptime to **99.8%**.
