PROFILE SUMMARY

- Experienced in building data pipelines, predictive models, and BI dashboards using Python, SQL, Power BI, and Snowflake.
- Delivered insights across finance, healthcare, and logistics by transforming large datasets into business-ready solutions.
- Proficient in cloud tools (AWS, Azure, GCP) and modern data stack including Spark, Airflow, Kafka, and DBT.

EXPERIENCE

Hasbro,Rhode Island(Remote)

Jan 2024 – Nov 2024

Data Analyst

- Extracted and cleaned sales, inventory, and marketing data from PostgreSQL, AWS S3, and APIs using Python, SQL, and advanced Excel modeling to support business insights..
- Developed dynamic Power BI dashboards for real-time tracking of toy sales, regional performance, and inventory turnover, improving stock allocation efficiency by 25% and decision-making speed by 15%.
- Automated ETL workflows using AWS Glue and Athena, integrating data from e-commerce platforms and internal ERP systems.
- Collaborated with marketing and supply chain teams to track promotional campaign performance and optimize stock distribution
- Delivered executive-level reporting on revenue, sell-through rates, and regional performance, increasing forecast accuracy by 20%.

DXC Technology, Bangalore, India

Jun 2022 – Jul 2023

Data Analyst

- Supported monthly and quarterly business reporting by designing Power BI dashboards for KPIs such as AUM growth, revenue breakdown, and operational metrics using Excel and VBA.
- Conducted fallout and trend analysis, using SQL and Python to extract, clean, and structure data from Salesforce and BigQuery
- Provided strategic analytics for cross-functional teams including Finance, Product, and Institutional Sales, delivering actionable insights for business reviews.
- Created and maintained Excel-based tools and reports aligned with stakeholder needs, ensuring robust data validation and reporting accuracy
- Produced documented KPI reports and participated in post-code change validations to ensure consistency across systems.

TECHNICAL SKILLS

Big Data	:	Spark, Hive, Kafka, Snowflake, Databricks, Flink.
Cloud	:	AWS (Glue, S3, Redshift, Lambda), Azure (Synapse, ADF, ADLS 2), GCP(Big query, Dataproc, Data prep)
Databases	:	PostgreSQL, MySQL, Cosmos DB, Cassandra, MongoDB
Programming	:	Python, SQL, Scala, Shell Script, Java, R
Visualization	:	Tableau, Power BI, ggplot2, Matplotlib, SSRS.
ML & Analytics	:	TensorFlow, XG Boost, Regression, Classification, Clustering, Neural Networks, Decision Trees
Tools	:	Airflow, DBT, ServiceNow, Slack, Grafana

PROJECTS

Patient Readmission Risk Analytics

Dec 2024 – Feb 2025

- Constructed Py Spark workflows in ADF to extract, clean, and join structured and unstructured EHR data automated pipeline decreased manual data preparation by 65%.
- Applied NLP (tokenization, lemmatization, entity extraction) using spaCy and TF-IDF on discharge summaries to capture clinical indicators and care complexity which enriched input features for modelling.
- Trained an XGBoost model on combined features to predict 30-day readmission risk – improved precision to 89%, outperforming baseline logistic regression by 7%.
- Visualized BI dashboards to visualize patient risk segments and care unit performance enabled clinicians to target high-risk cases, estimating a 15% readmission drop.

Supply Chain Delay Risk Analysis

Dec 2023 – Jan 2024

- Developed Spark ETL pipelines to extract shipment logs, vendor schedules, and weather feeds, stored in AWS S3 & automated with Airflow DAGs to support daily delay risk scoring and minimized manual effort by 80%.
- Created a logistic regression model in Python using features like carrier reliability, route distance, delay history, and real-time weather disruptions and achieved 30% lift in delay prediction accuracy, supporting route optimization for logistics ops.
- Deployed Power BI dashboards displaying delay probability by route, top risk factors by vendor, and time-of-day analysis assisted making proactive rerouting decisions, improving on-time deliveries by 18% across 5 major zones.

Flight Delay Analysis

Aug 2023 – Oct 2023

- Assembled ETL workflows with AWS Glue and PySpark to ingest data into Snowflake enabling centralized analysis
- Refined performance through clustering keys & partitioned views reducing query execution time by 40% across reports.
- Presented Power BI dashboards connected to Snowflake to track delays by route and airport – improved schedule planning accuracy and eliminated disruption impact.

EDUCATION

Master of Science in Computer Science, Data Science

Aug 2023 – Dec 2024

University of North Carolina at Charlotte

Bachelor of Technology in Computer Science and Engineering

Jul 2018 – Apr 2022

Gitam University

CERTIFICATION

- Certified in Microsoft Azure DP-900, Power BI Data Analyst Associate, AWS Certified Data Engineer, Introduction to AI.
