yellareddy2929@gmail.com | Address: 2216 Renault drive, Saint louis, Missouri, 63146

Detail-oriented professional with a robust background in data collection, ETL processes, and automated reporting. Holds a Master's in Computer Science and Information systems, I am passionate about Data Scientist, Data Analytics, Data Analyst, Machine Learning Engineer. Proficient in conducting statistical analysis, and leveraging predictive modeling to drive operational excellence. Demonstrates expertise in data visualization, incident management, metrics definitions, and customer success strategies. Adept at analyzing business processes and requirements to deliver data-driven insights and optimize business outcomes.

RELEVANT COURSEWORK

Software Engineering | Information systems and management | Computer Science | Cryptographic engineering | Web-based business development | Cloud computing | Computational Foundations of AI | Information Technology | Management information assurance security | Theory and implementation of database systems| Artificial Intelligence | Sensor Networks & smart systems.

EDUCATION

Masters in Computer and Information Science (Graduation)

(Aug 2023- May 2025)

Southeast Missouri State University

GPA 3.7/4.0

Bachelor of Computer Science Engineering (UnderGraduation)

Aug 2019- May 2023

Veltech university, India

GPA 8.6/10.0

EXPERIENCE

Data Scientist - Epic Solutions(Remote)

(May 2024-Present)

- Collected and analyzed large operational datasets to support data-driven business decisions and performance analysis.
- Wrote SQL queries to extract, transform, and validate data from relational databases.
- Developed Power BI dashboards and reports to visualize KPIs, trends, and operational performance metrics.
- Identified patterns and trends within business datasets to support strategic planning and decision-making.
- Performed data cleaning and preprocessing using Python libraries including Pandas and NumPy.
- Automated data pipelines for efficient data extraction, transformation, and reporting processes.
- Collaborated with cross-functional teams to gather reporting requirements and deliver analytical insights.
- Validated datasets to ensure accuracy, completeness, and consistency across reporting systems.
- Documented analytical methodologies, reporting workflows, and data transformation procedures.
- Delivered actionable insights through dashboards, visualizations, and analytical reports.

Data Analyst – U Future Tech.

(Aug 2022- May 2023)

- Collected, organized, and processed large datasets from multiple business and operational sources.
- Developed SQL queries to extract and manipulate structured data for analytics and reporting.
- Built automated data pipelines supporting ETL processes and analytics workflows.
- Conducted exploratory data analysis to identify patterns, trends, and anomalies within datasets.
- Implemented data cleaning and preprocessing techniques to improve data quality and reliability.
- Created structured datasets to support business intelligence reporting and analytics initiatives.
- Collaborated with engineering and analytics teams to define reporting requirements and deliver insights.
- Developed reusable scripts and modules for efficient data processing and transformation.
- Monitored data integrity and validated datasets to maintain accuracy across reporting systems.
- Documented data workflows, transformation processes, and analytical methodologies.

Machine Learning Intern – TRY-LOGIC Soft Solutions AP pvt ltd.

(Jun 2021- Jun 2022)

- Python Programming: Developed and implemented machine learning algorithms using Python, enhancing model performance through iterative testing and optimization.
- Data Handling: Leveraged NumPy and Pandas for efficient data manipulation, including loading, cleaning, and preprocessing large datasets. Improved data pipeline efficiency by automating CSV file ingestion processes.
- Database Management: Executed complex SQL queries for data retrieval and analysis. Established seamless database connections between Python applications and MySQL, facilitating smooth data flow for machine learning tasks.
- Software Proficiency: Utilized PyCharm and Jupyter for developing and testing machine learning models. Streamlined the workflow by effectively installing and managing third-party Python modules..

TECHNICAL SKILLS

Data Analyst | Data Warehouses | Etl Tools | Data Exploration | Data Visualization | Database Management | Data Structures | Data Manipulation | Data Integration | Data Transformation | Business Analyst | Data Engineering | Data Extraction | Data Migration | Business Decision Making |

SOFT SKILLS

Strategic Insights | Algorithms | Business Workflows | Internal Communication | Requirements Gathering | Project Documentation | Responsibilities | Performance Management | Analytical Support | Troubleshoot | Assist |

TOOLS AND TECHNOLOGIES

- Languages:** Javascript, Angularjs, Nodejs, Python(Coding) Programming Language(Numpy, Pandas, Matplotlib, Seaborn)
- Databases:** SQL Queries, Microsoft Access Office(Microsoft Excel, Microsoft Word, Microsoft Dynamics 365, MS Powerpoint), My SQL Server
- Visualization Tools:** Microsoft Power Bi, Tableau, MS-Excel(VBA, Vlookup, Xlookup, Macros),Word
- Cloud & DevOps:** AWS(EC2, Lambda, DynamoDB), GCP (BigQuery), Azure, Docker, Kubernetes
- Big Data:**Spark, Hadoop, Hive, Pig,Sqoop,Oozie

PROJECTS

Healthcare Cost Optimization and Patient Outcome Analysis Using Real-World Claims Data:

- Collected and organized healthcare claims datasets to support analytical and reporting initiatives.
- Conducted exploratory data analysis to identify trends in patient demographics, treatments, and costs.
- Applied statistical analysis techniques to evaluate healthcare cost drivers and treatment outcomes.
- Performed data cleaning and validation ensuring high-quality datasets for healthcare analytics.
- Structured healthcare data for predictive modeling and analytical reporting.
- Built Power BI dashboards visualizing healthcare KPIs, treatment trends, and operational metrics.
- Identified patterns and anomalies in healthcare datasets using statistical and machine learning methods.
- Generated analytical reports translating healthcare insights into actionable recommendations.
- Collaborated with interdisciplinary teams to verify healthcare data accuracy and reporting needs.
- Documented data preparation processes, analysis methodologies, and reporting frameworks.

Pinellas County, Hurricane Helene Using Excel & PowerBI (Real Time Project): (Nov 2024 – Mar 2025)

- Data Accuracy: Over 5,000 records were streamlined and verified to ensure that they met FEMA requirements for funding eligibility.
- Resource Optimization: By using data analysis to identify high-priority recovery zones, resource allocation was improved by 20%.
- Dashboard Reporting: To improve transparency and decision-making, Power BI dashboards were created to monitor project KPIs.
- Cost Efficiency: By doing cost analysis, reductions that resulted in a 15% reduction in overall project expenses were found.

Health Monitoring and Analysis using Python : (Sep 2023 – Nov 2023)

- Elevated Blood Pressure Prevalence: 40% of the dataset falls under the 'Elevated' and 'Hypertension Stage 1' categories, indicating a need for targeted interventions to manage blood pressure levels in this population.
- Heart Rate Consistency: 90% of individuals have a 'Normal' heart rate, with only 5% showing 'Low' and 5% 'High' heart rates, suggesting that most of the population maintains a stable heart rate within healthy ranges.
- Oxygen Saturation Levels: 95% of patients have 'Normal' oxygen saturation levels, with only 5% showing 'Low' saturation, indicating that oxygen deprivation is not a significant issue for the majority of this population.

Customer Churn Analysis Using SQL & Python: Jan 2024 – Mar 2024

- High Complaint Churn: Customers with over 5 service complaints exhibited a 35% churn rate, more than double the overall churn rate of 18%. Targeted retention campaigns for these customers could reduce churn by up to 20%.
- Subscription Plan Impact: Analysis revealed that customers on the basic subscription plan had a 25% higher churn rate compared to those on premium plans. Upselling to premium plans could decrease churn by 15%.
- Engagement Correlation: Customers with fewer than 3 interactions per month with customer support had a 28% churn rate, indicating that increasing engagement could lower churn by up to 10%.

Sales Performance Dashboard in Power BI May 2024 – Jun 2024

- Top Product Contribution: Identified that the top 10 products contributed to 60% of total revenue, with an average sales growth of 15% month-over-month. Focusing marketing efforts on these products could increase overall revenue by 10%.
- Regional Sales Disparity: Analysis showed that the West region underperformed by 20% compared to other regions, with a declining sales trend. Redirecting resources and sales strategies to this region could boost sales by 12%.
- Customer Segment Profitability: Discovered that premium customers, though only 30% of the customer base, accounted for 55% of total profits. Targeting similar high-value segments could increase profit margins by 8%.

App Reviews Sentiment Analysis Using Machine Learning Jun 2024 – July 2024

- Sentiment Distribution: 60% of the reviews are classified as neutral, 30% as positive, and 10% as negative, indicating that most users are not strongly opinionated about the app.
- Rating and Sentiment Correlation: 80% of 1-star ratings are associated with neutral or negative sentiments, suggesting that low ratings are likely to reflect dissatisfaction or lack of positive experiences.
- Common Themes in Reviews: The most frequent words in positive reviews include "good" and "easy," while negative reviews frequently mention "slow" and "problem," highlighting areas for potential improvement.

Certifications

- Databricks Generative AI Fundamentals
- AWS Certified Cloud Practitioner
- Prompt Engineer- Outskill
